Foreword

The papers contained in this volume were presented at the third international Workshop on Implementing Automata, held September 17–19, 1998, at the University of Rouen, France.

Automata theory is the cornerstone of computer science theory. While there is much practical experience with using automata, this work covers diverse areas, including parsing, computational linguistics, speech recognition, text searching, device controllers, distributed systems, and protocol analysis. Consequently, techniques that have been discovered in one area may not be known in another. In addition, there is a growing number of symbolic manipulation environments designed to assist researchers in experimenting with and teaching on automata and their implementation; examples include FLAP, FADELA, AMORE, Fire-Lite, Automate, AGL, Turing's World, FinITE, INR, and Grail. Developers of such systems have not had a forum in which to expose and compare their work. The purpose of this workshop was to bring together members of the academic, research, and industrial communities with an interest in implementing automata, to demonstrate their work and to explain the problems they have been solving.

These workshops started in 1996 and 1997 at the University of Western Ontario, London, Ontario, Canada, prompted by Derick Wood and Sheng Yu. The major motivation for starting these workshops was that there had been no single forum in which automata-implementation issues had been discussed. The interest shown in the first and second workshops demonstrated that there was a need for such a forum. The participation at the third workshop was very interesting: we counted sixty-three registrations, four continents, ten countries, twenty-three universities, and three companies.

The general organization and orientation of WIA conferences is governed by a steering committee composed of Jean-Marc Champarnaud, Stuart Margolis, Denis Maurel, and Sheng Yu, with Derick Wood as chair. The WIA 1999 meeting will be held at the University of Potsdam, Germany, and the 2000 meeting in London, Ontario.

June 1999

Jean-Marc Champarnaud  Denis Maurel  Djelloul Ziadi
Organization

WIA’98 was organized in France by Jean-Marc Champarnaud and Djelloul Ziadi, LIFAR, University of Rouen, and Denis Maurel, LI/E3i, University of Tours.

Executive Committee

Conference Co-chairs: Jean-Marc Champarnaud
Denis Maurel
Program Committee Co-chairs: Jean-Marc Champarnaud
Denis Maurel
Djelloul Ziadi
Conference Coordinators: Pascal Caron
Jean-Luc Ponty
Djelloul Ziadi

Program Committee

Anne Bruggemann-Klein
Technische Universität Munchen, Germany
Jean-Marc Champarnaud
Université de Rouen, France
Max Garzon
University of Memphis, Tennessee, USA
Franz Gunthner
Ludwig Maximillian Universität, Germany
Nicolas Halbwachs
CNRS, VERIMAG, France
Helmut Jurgensen
University of Western Ontario, Canada
Universität Postdam, Germany
Stuart Margolis
Bar Ilan University, Israel
Denis Maurel
Université de Tours, France
Mehryar Mohri
AT&T Labs-Research, USA
Gene Myers
University of Arizona, Tucson, USA
Jean-Eric Pin
CNRS, Université Paris 7, France
Darrell Raymond
Gateway Group Inc., Canada
Emmanuel Roche
Teragram Corporation, Boston, USA
Susan Rodger
Duke University, USA
Kai Salomaa
University of Western Ontario, Canada
Jorge Stolfi
Universidade de Campinas, Brazil
Wolfgang Thomas
Universität Kiel, Germany
Bruce Watson
Ribbit Software Systems Inc., Canada
Derick Wood
HK University of Science & Technology, Hong-Kong
Sheng Yu
University of Western Ontario, Canada
Djelloul Ziadi
Université de Rouen, France
Invited Talk

We thank Professors Georges Hansel and Maurice Nivat for their very interesting talks (that are not included in this book):

Georges Hansel  Automata and Logic
Maurice Nivat  Equivalences of NDFA’s and Monoidal Morphisms

Sponsoring Institutions

We would like to warmly thank all the sponsors who agreed to support WIA’98

Our administrative authorities were particularly generous:

– The Faculty of Science and Technology at Rouen
– The Scientific Council of the University
– The Ministry of National Education Research and Technology
– The Research Program PRC/GDR AMI (which involves the Ministry and the C.N.R.S.)

The local authorities also agreed to participate financially. Let us thank today:

– The Ville de Mont-Saint-Aignan which took in charge the printing of the pre-proceedings
– The Ville de Rouen
– The Conseil Général de Seine-Maritime
– The Conseil Régional de Haute-Normandie

A special thanks goes to the companies and their managers who paid particular attention to WIA topics. Let us mention here:

– Micro-Technique Rouen (micro-computer distributor)
– Hewlett-Packard and Medasys-Digital-Systems (distributor)
– TRT Lucent Technologies (telephony, embedded software)
– EDF Division Recherche
– Matra Systèmes et Information
– Dassault Aviation
– Cap Gemini
Table of Contents

Extended Context-Free Grammars and Normal Form Algorithms ........ 1
  Jürgen Albert (Universität Würzburg), Dora Giammarresi (Università
di Geova), Derick Wood (Hong Kong University of Science
& Technology)

On Parsing $LL$-Languages .............................. 13
  Norbert Blum (Universität Bonn)

On Parsing and Condensing Substrings of LR Languages in Linear Time .. 22
  Heiko Goeman (University of Bonn)

Minimal Cover-Automata for Finite Languages ...................... 43
  Cezar Câmpeanu, Nicolae Sâncean, Sheng Yu (University of Western
Ontario)

Determinization of Glushkov Automata .......................... 57
  Jean-Marc Champarnaud, Djelloul Ziadi, Jean-Luc Ponty (Université
de Rouen)

Implementing Reversed Alternating Finite Automaton (r-AFA)
Operations .............................................. 69
  Sandra Huerter, Kai Salomaa, Xiuming Wu, Sheng Yu (University
of Western Ontario)

Operations on DASG ....................................... 82
  Zdeněk Troníček (Czech Technical University)

Implementation of Nondeterministic Finite Automata for Approximate
Pattern Matching ........................................... 92
  Jan Holub, Bořivoj Meličhar (Czech Technical University)

The Syntactic Prediction with Token Automata: Application to HandiAS
System ..................................................... 100
  Denis Maurel (Université de Tours), Brigitte Le Pêvédic (Université
de Nantes), Olivier Rousseau (Université de Tours and C Technologie)

Bi-directional Automata to Extract Complex Phrases from Texts ......... 110
  Thierry Poibeau (THOMSON-CSF)

A Fast New Semi-incremental Algorithm for the Construction of Minimal
Acyclic DFAs ................................................ 121
  Bruce W. Watson (University of Pretoria and Ribbit Software Systems
Inc)
Using Acceptors as Transducers .................................................. 133
  Matti Nykänen (University of Helsinki)

Proving Sequential Function Chart Programs Using Automata .......... 149
  Dominique L’Her, Philippe Le Parc, Lionel Marcé (Université
de Bretagne Occidentale)

Automata and Computational Probabilities ................................. 164
  Marie-Chantal Beaulieu, Anne Bergeron (Université du Québec
  à Montréal)

Automata and Binary Decision Diagrams ................................. 178
  Jean-Francis Michon, Jean-Marc Champarnaud (Université de Rouen)

Operations over Automata with Multiplicities .......................... 183
  Gérard Duchamp, Marianne Flouret, Éric Laugerotte (Université
de Rouen)

Paging Automata ............................................................... 192
  Ricardo Ueda Karpischek

On the Syntax, Semantics, and Implementation of a Graph-Based
Computational Environment .................................................... 199
  Yuri Velinov (University of Natal)

The Finite State Automata’s Design Patterns ............................. 213
  Sandro Pedrazzini (University of Basel and IDSIA)

Automata to Recognize Finite and Infinite Words with at Least Two
Factorizations on a Given Finite Set ....................................... 220
  Xavier Augros (Université de Nice-Sophia Antipolis)

Autographe: A Graphical Version of Automate ............................ 226
  Are Uppman, Jean-Marc Champarnaud (Université de Rouen)

INTEX 4.1 for Windows: A Walkthrough .................................. 230
  Max Silberztein (Université de Franche-Comté)

Author Index ................................................................. 245
