Preface

The papers in this volume were presented at the Fifth Annual International Symposium on Algorithms and Computation, held on 25-27 August, 1994, in Beijing, China. The symposium was sponsored by the National Natural Science Foundation of China, the Institute of Applied Mathematics, Chinese Academy of Sciences, the Presidential Fund of Chinese Academy of Sciences, the Chinese Operations Research Society, the National Science Council of China,, IPSJ SIGAL, and IEICE TGTFC.

In response to the Call for Papers, nearly 200 abstracts were submitted. The papers in this volume were selected from them by the program committee consisting of Siu-Wing Cheng, F.K.R. Chung, Kyung-Yong Chwa, Ding-Zhu Du, Peter Eades, Wen-Lian Hsu, Frank D. Hsu, Xiaodong Hu, Marek Karpinski, Naoki Katoh, Ker-I Ko, Ming Li, Nimrod Megiddo, Satoru Miyano, and Mike Sipser. Every submitted paper was read by 3-6 program committee members. Thus, the job of the program committee is quite challenging.

We wish to thank all who submitted papers for consideration. We wish to thank all program committee members for their excellent work. We wish to thank our colleagues who contributed to the success of the symposium. We wish to thank the sponsors for their assistance and support.

August 1994

Ding-Zhu Du
Xiang-Sun Zhang
Symposium Chair:
Xiang-Sun Zhang (Institute of Applied Mathematics, Chinese Academy of Sciences, China)

Program Committee Chair:
Ding-Zhu Du (Institute of Applied Mathematics, Chinese Academy of Sciences, China and University of Minnesota, USA)

Program Committee Members:
Siu-Wing Cheng, Hong Kong U. of Science and Technology, HK
F.K.R. Chung, Bell Communication Research, USA
Kyung-Yong Chwa, KAIST, Republic of Korea
Peter Eades, University of Newcastle, Australia
Frank D. Hsu, Fordham University, USA
Wen-Lian Hsu, Academia Sinica, Taipei, China
Xiaodong Hu, Chinese Academy of Sciences, Beijing, China
Marek Karpinski, University of Bonn, Germany
Naoki Katoh, Kobe University of Commerce, Japan
Ker-I Ko, State University of New York at Stony Brook, USA
Ming Li, University of Waterloo, Canada
Nimrod Megiddo, IBM, USA
Satoru Miyano, Kyushu University, Japan
Mike Sipser, MIT, USA

Organising Committee Members:
Yu-Di Cai
Lin Cheng
Wei-Wu Fang
Xiao-Dong Hu
Yong Li
Shu-Feng Qi
(All from Institute of Applied Mathematics, Chinese Academy of Sciences)
Contents

SESSION 0

Polynomial Equations-Solving and its Applications ................................. 1
Wen-Tsun Wu

Quasi-Random Combinatorial Structures .............................................. 10
Ronald L. Graham

SESSION 1A: Computational Geometry

Hamiltonian Abstract Voronoi Diagrams in Linear Time ....................... 11
Rolf Klein and Andrzej Lingas

Every Set of Disjoint Line Segments Admits a Binary Tree .................... 20
Prosenjit Bose, Michael E. Houle, and Godfried Toussaint

The Traveling Cameraman Problem, with Applications to Automatic
Optical Inspection ............................................................................ 29
Kazuo Iwano, Prabhakar Raghavan, and Hisao Tamaki

On Determining the Congruity of Point Sets in Higher Dimensions ........ 38
Tatsuya Akutsu

SESSION 1B: Computational Complexity

On Random Hard Sets for NP ............................................................. 47
Ronald V. Book and Osamu Watanabe

Computing Solutions Uniquely Collapses the Polynomial Hierarchy .......... 56
Lane A. Hemaspaandra, Ashish V. Naik, Mitsunori Ogihara,
and Alan L. Selman

Verifying the Determinant in Parallel ............................................... 65
Miklos Santha and Sovanna Tan

Hardness of Approximating Graph Transformation Problem ................... 74
Chih-Long Lin
SESSION 2A: Distributed Algorithms

Randomized Wait-Free Naming .................................................. 83
Alessandro Panconesi, Marina Papatriantafilou, Philippas Tsigas, and Paul Vitányi

Unifying Themes for Network Selection ................................. 92
Sanguthevar Rajasekaran, Wang Chen, and Shibu Yooseph

Robust Asynchronous Algorithms in Networks with a Fault Detection
Ring ...................................................................... 101
M. Molcho and S. Zaks

Distributed Algorithms for Finding Small Cycle Covers in Arbitrary
Networks ................................................................. 110
Esther Jennings and Lenka Motyčková

SESSION 2B: Learning

A Neural Network Model for Quadratic Programming with Simple
Upper and Lower Bounds and its Application to Linear Programming .... 119
Xiang-Sun Zhang and Hui-Can Zhu

Analysis of the Convergency of Topology Preserving Neural Networks
on Learning ................................................................. 128
Daming Zhu, Shaohan Ma, and Hongze Qiu

On Helping and Interactive Proof Systems ............................ 137
V. Arvind, J. Köbler, and R. Schuler

Average Time Complexity of the SAT 1.2 Algorithm ................. 146
Jun Gu and Qian-Ping Gu

SESSION 3A: Combinatorial Algorithms

Average Cost to Produce Partial Orders ................................. 155
Jingsen Chen

Two Notes on Low-Density Subset Sum Algorithms ................... 164
Dazing Li and Shaohan Ma

Rotation Distance, Triangulations of Planar Surfaces and Hyperbolic
Geometry ................................................................. 172
Jin-Yi Cai and Michael D. Hirsch
Finitely Representable Spatial Objects and Efficient Computation .......... 181
Yongmao Chen and Terence R. Smith

SESSION 3B: Graph Algorithms

Computing All Small Cuts in Undirected Networks ....................... 190
Hiroshi Nagamochi, Kazuhiro Nishimura, and Toshihide Ibaraki

Edge-Coloring and f-Coloring for Various Classes of Graphs .......... 199
Xiao Zhou and Takao Nishizeki

Edge-Disjoint Paths in Permutation Graphs ............................ 208
C.P. Gopalakrishnan and C.Pandu Rangan

Minimum Augmentation to k-Edge-Connect Specified Vertices of a Graph ................................................................. 217
Satoshi Taoka and Toshimasa Watanabe

SESSION 4A: Randomized Algorithms

Algorithmic Chernoff-Hoeffding Inequalities in Integer Programming ... 226
Anand Srivastav and Peter Stangier

Approximate Pattern Matching with Samples ............................ 234
Tadao Takaoka

An Efficient Optimal Algorithm for Minimizing the Overall Communication Cost in Replicated Data Management ............. 243
Xuemin Lin and Maria E. Orlowska

Multispace Search: A New Optimization Approach ....................... 252
Jun Gu

SESSION 4B: Parallel Algorithms

Realizing Degree Sequences in Parallel ................................... 261
Srinivasa Arikati and Anil Maheshwari

Efficient Sequential and Parallel Algorithms for the Negative Cycle Problem ................................................................. 270
Dimitris Kavvadias, Grammati E. Pantziou, Paul G. Spirakis, and Christos D. Zaroliagis

Fast and Efficient Operations on Parallel Priority Queues .............. 279
Danny Z. Chen and Xiaobo Hu
Heaps with Bits ......................................................... 288
Svante Carlsson, Jingsen Chen, and Christer Mattsson

SESSION 5A: Algebraic Algorithms

Components and Projections of Curves over Finite Fields ............... 297
Joachim von zur Gathen and Igor Shparlinski

On the Approximation of Finding Various Minimal, Maximal,
and Consistent Sequences ............................................... 306
Martin Middendorf

A Linear-Time Algorithm for Computing Characteristic Strings ....... 315
Michio Nakanishi, Morio Hasidume, Minoru Ito, and Akihiro Hashimoto

The Maximum Latency and Identification of Positive Boolean
Functions ................................................................. 324
Kazuhisa Makino and Toshihide Ibaraki

SESSION 5B: VISI and Routing

Fast Deterministic Hot-Potato Routing on Processor Arrays .......... 333
Michael Kaufmann, Harald Lauer, and Heiko Schröder

k-Pairwise Cluster Fault Tolerant Routing in Hypercubes ............ 342
Qian-Ping Gu and Shietung Peng

On Steiner Minimal Trees in Grid Graphs and Its Application to
VLSI Routing ........................................................... 351
Michael Kaufmann, Shaodi Gao, and K. Thulasiraman

Optimal Routing of Permutations on Rings ........................... 360
Xiaojun Shen, Qing Hu, Hao Dai, and Xiangzu Wang

SESSION 6A: Computational Complexity

Resource Bounded Randomness and Weakly Complete Problems ....... 369
Klaus Ambos-Spies, Sebastiaan A. Terwijn, and Xizhong Zheng

Deterministic ω Automata vis-a-vis Deterministic Buchi Automata .... 378
Sriram C. Krishnan, Anuj Puri, and Robert K. Brayton

Quantum Computation and NP-Complete Problems ........................ 387
Takashi Mihara and Tetsuro Nishino
Separability and One-Way Functions ........................................ 396
Lance Fortnow and John Rogers

SESSION 6B: Approximation and Optimization

On the Approximation of Largest Common Subtrees and Largest
Common Point Sets ......................................................... 405
Tatsuya Akutsu and Magnúss M. Halldórsson

An Approximation Scheme for Some Steiner Tree Problems
in the Plane ................................................................. 414
Tao Jiang and Lusheng Wang

A Chain Decomposition Algorithm for the Proof of a Property on
Minimum Weight Triangulations ......................................... 423
Bo-Ting Yang, Yin-Feng Xu, and Zhao-Yong You

The Generating Algorithm for Quasi-Full Steiner Trees ............. 428
Jiyu Ding

SESSION 7A: Data Structures

Analysing Deletions in Competitive Self-Adjusting Linear List
Algorithms ............................................................... 433
Lucas Chi Kwong Hui and Charles U. Martel

Are Fibonacci Heaps Optimal? ............................................ 442
Diab Abuaiadh and Jeffrey H. Kingston

Simple and Efficient Graph Compression Schemes for Dense and
Complement Graphs ................................................... 451
Ming-Yang Kao and Shang-Hua Teng

Improved Algorithms for Coloring Random Graphs .................. 460
C.R. Subramanian

SESSION 7B: Parallel Algorithms

On the Parallel Complexity of Solving Recurrence Equations ......... 469
Oscar H. Ibarra and Nicholas Q. Trân

Extended Graph Connectivity and Its Gradually Increasing Parallel
Complexity ............................................................... 478
Chuzo Iwamoto and Kazuo Iwama
Parallel h-v Drawings of Binary Trees ......................................... 487
Panagiotis T. Metaxas, Grammati E. Pantziou, and Antonis Symvonis

An Efficient Parallel Strategy for Recognizing Series-Parallel Graphs ..... 496
Sun-Yuan Hsieh and Chin-Wen Ho

SESSION 8A: Geometric Algorithms

Orthogonal Queries in Segments and Triangles ............................... 505
Takeshi Tokuyama

Further Computational Geometry in Secondary Memory ...................... 514
Binhai Zhu

Shortest Safari Routes in Simple Polygon ..................................... 523
Xuehou Tan and Tomio Hirata

On Greedy Tetrahedralization of Points in 3D ............................... 532
Francis Y. Chin and Cao An Wang

SESSION 8B: Graph Algorithms

The Totally-Perfect Bipartite Graph and Its Construction ................. 541
Kunihiro Fujiiyoshi, Yoji Kajitani, and Hiroshi Niitsu

k-Best Cuts for Circular-Arc Graphs ................................... 550
K.-H. Tsai and D.T. Lee

Revisiting Circular Arc Graphs .......................................... 559
Lin Chen

Weighted Irredundance of Interval Graphs ............................... 567
C.Pandu Rangan and Maw-Shang Chang

SESSION 9A: Complexity

A Reordering Operation for an Ordered Binary Decision Diagram and an Extended Framework for Combinatorics of Graphs .......... 575
Seiichiro Tani and Hiroshi Imai

On the Size of Ordered Binary Decision Diagrams Representing Threshold Functions .................................................. 584
Kazuhisa Hosaka, Yasuhiko Takenaga, and Shuzo Yajima
Nonuniform Lowness and Strong Nonuniform Lowness ..................... 593  
Hong-Zhou Li and Guan-Ying Li

Definition and Existence of Super Complexity Cores ..................... 600  
Ingrid Biehl

SESSION 9B: Combinatorial Algorithms

Efficient Algorithms for Assigning Chain-Like Tasks on a Chain-Like Network Computer ...................................................... 607  
Gilbert H. Young, Chi-Lok Chan

Manpower Scheduling with Shift Change Constraints ..................... 616  
Hoong Chuin Lau

Fast Algorithms for Transversal Matroid Intersection Problems ........ 625  
Ying Xu and Harold N. Gabow

A Convex Hull Algorithm on Coarse-Grained Multiprocessors .......... 634  
Xiaolie Deng

SESSION 10A: Combinatorial Algorithms

A Multiway Merging Network ........................................... 643  
De-Lei Lee and Kenneth E. Batcher

Reporting and Counting Intersections of Lines within a Polygon .......... 652  
Tetsuo Asano

A New Problem in String Searching ..................................... 660  
George Havas and Jin Xian Lian

SESSION 10B: Distributed and Randomized Algorithms

Achieving the Shortest Clock Period by Inserting the Minimum Amount of Delay ................................................................. 669  
Shangzhi Sun, David H.C. Du, and Guoliang Xue

A Randomized Algorithm to Finite Automata Public Key Cryptosystem ................................................................. 678  
Feng Bao and Yoshihide Igarashi

Author Index ........................................................................... 687
