Preface

The Eight International Conference on Product-Focused Software Process Improvement (PROFES 2007) brought together researchers and industrial practitioners to report new research results and exchange experiences and findings in the area of process and product improvement. The focus of the conference is on understanding, learning, evaluating, and improving the relationships between process improvement activities (such as the deployment of innovative defect detection processes) and their effects in products (such as improved product reliability and safety). Consequently, major topics of the conference include the evaluation of existing software process improvement (SPI) approaches in different contexts, the presentation of new or modified SPI approaches, and the relation between SPI and new development techniques or emerging application domains.

This year’s conference theme focused on global software development. More and more products are being developed in distributed, global development environments with many customer–supplier relations in the value chain. Outsourcing, off-shoring, near-shoring, and even in-sourcing aggravate this trend further. Supporting such distributed development requires well-understood and accurately implemented development process interfaces, process synchronization, and an efficient process evolution mechanisms. Overcoming cultural barriers and implementing efficient communication channels are some of the key challenges. It is clear that process improvement approaches also need to consider these new development contexts.

A second key focus of PROFES 2007 was on agile software development. Market dynamics require organizations to adapt to changes of the development environment and to enforce innovations better and faster. This often results in process changes that impose risk challenges for SPI approaches. Advanced SPI is required to support the assessment of the impact of process changes such as the introduction of agile methods. Due to the fact that software development processes are human-based and depend heavily on the development context, process changes and their resulting effects should be considered carefully. We consider the development context to include at least the domain-specific characteristics, the workforce capabilities, and the level of work distribution.

The technical program was selected by a committee of leading experts in software process modeling and SPI research. This year, 56 papers from 21 nations were submitted, with each paper receiving at least three reviews. The Program Committee met in Riga for one full day in February 2007. The Program Committee finally selected 30 technical full papers. The topics indicate that SPI remains a vibrant research discipline of high interest for industry. Emerging technologies and application domains, a paradigm shift to global software and system engineering in many domains, and the need for better decision support for SPI are reflected in these papers. The technical program consisted of the tracks global software development, software process improvement, software process modeling and evolution, industrial experiences, agile software development, software measurement, simulation and decision support, and processes and methods. We were proud to have four distinguished keynote speakers,
Carol Dekkers, Dieter Rombach, Jari Still, Guntis Urtāns, as well as interesting tutorials and a collocated workshop.

We are thankful for the opportunity to serve as Program Co-chairs for this conference. The Program Committee members and reviewers provided excellent support in reviewing the papers. We are also grateful to the authors, presenters, and session chairs for their time and effort that made PROFES 2007 a success. The General Chair, Pasi Kuvaja, and the Steering Committee provided excellent guidance. We wish to thank the University of Latvia, the Fraunhofer Institute for Experimental Software Engineering (IESE), VTT, the University of Oulu and all the other sponsors and supporters for their contributions and making the event possible. We would especially like to thank the Organizing Chairs Darja Šmite and Juris Borzovs and the Local Organizing Committee for their highly engaged organization of the conference in Riga. Last but not least, many thanks to Timo Klein at Fraunhofer IESE for copyediting this volume.

April 2007

Jürgen Münch
Pekka Abrahamsson
Conference Organization

General Chair

Pasi Kuvaja, University of Oulu (Finland)

Program Co-chairs

Jürgen Münch, Fraunhofer IESE (Germany)
Pekka Abrahamsson, VTT Technical Research Centre (Finland)

Organizing Co-chairs

Juris Borzovs, University of Latvia (Latvia)
Darja Šmite, University of Latvia (Latvia)

Local Organizing Committee

Dainis Dosbergs, PR-Latvia (Latvia)
Krišs Rauhvargers, University of Latvia (Latvia)

Program Committee

Pekka Abrahamsson, VTT Electronics, Finland
Bente Anta, Simula Research Laboratory, Norway
Andreas Birk, Software Process Management, Germany
Mark van den Brand, HvA & CWI, The Netherlands
Gerardo Canfora, University of Sannio at Benevento, Italy
Reidar Conradi, NTNU, Norway
Torgeir Dingsøyr, Sintef, Norway
Tore Dybå, SINTEF, Norway
Jens Heidrich, Fraunhofer IESE, Germany
Martin Höst, Lund University, Sweden
Frank Houdek, DaimlerChrysler, Germany
Tua Huomo, VTT Electronics, Finland
Hajimu Iida, Nara Institute of Science and Technology, Japan
Katsuro Inoue, Osaka University, Japan
Yasushi Ishigai, IPA and Mitsubishi Research Institute, Japan
Janne Järvinen, Solid Information Technology, Finland
Erik Johansson, Q-Labs, Sweden
Philip Johnson, University of Hawaii, USA
Natalia Juristo, Universidad Politecnica de Madrid, Spain
Tuomo Kähkönen, Nokia, Finland
Haruhiko Kaiya, Shinshu University, Japan
Kari Känsälä, Nokia Research Center, Finland
Masafumi Katahira, JAXA, Japan
Pasi Kuvaja, University of Oulu, Finland
Makoto Matsushita, Osaka University, Japan
Kenichi Matsumoto, NAIST, Japan
Maurizio Morisio, University of Turin, Italy
Mark Müller, Bosch, Germany
Jürgen Münch, Fraunhofer IESE, Germany
Paolo Nesi, University of Florence, Italy
Risto Nevalainen, STTF, Finland
Mahmood Niazi, Keele University, UK
Hideto Ogasawara, Toshiba, Japan
Dietmar Pfahl, University of Calgary, Canada
Teade Punter, LAQUSO, The Netherlands
Karl Reed, La Tobe University, Australia
Günther Ruhe, University of Calgary, Canada
Ioana Rus, Honeywell Aerospace, USA
Outi Salo, VTT Electronics, Finland
Kurt Schneider, University of Hannover, Germany
Carolyn Seaman, UMBC, Baltimore, USA
Michael Stupperich, DaimlerChrysler, Germany
Markku Tukiainen, University of Joensuu, Finland
Rini van Solingen, LogicaCMG, The Netherlands
Matias Vierimaa, VTT Electronics, Finland
Hironori Washizaki, National Institute of Informatics, Japan
Claes Wohlin, Blekinge Institute of Technology, Sweden
Bernard Wong, University of Technology Sydney, Australia

External Reviewers

Nicola Boffoli, Software Engineering Research Laboratory, Italy
Kyohei Fushida, Software Design Laboratory, Japan
Ahmed Al-Emran, University of Calgary, Canada
Maria Alaranta, Turku School of Economics, Finland
Martin Solari, ORT University, Uruguay
# Table of Contents

## Keynote Addresses

Software Development and Globalization (Abstract) .......................... 1  
*H. Dieter Rombach*

Software Development Globalization from the Baltic Perspective (Abstract) ...................................................... 2  
*Guntis Urtāns*

Experiences in Applying Agile Software Development in F-Secure (Abstract) ...................................................... 3  
*Jari Still*

People Side of IT Globalization (Abstract) .......................... 4  
*Carol Dekkers*

## Global Software Development

An Industrial Survey of Software Outsourcing in China ....................... 5  
*Jianqiang Ma, Jingyue Li, Weibing Chen, Reidar Conradi, Junzhong Ji, and Chunnian Liu*

Understanding Lacking Trust in Global Software Teams: A Multi-Case Study ...................................................... 20  
*Nils Brede Moe and Darja Šmite*

Utilization of a Set of Software Engineering Roles for a Multinational Organization ...................................................... 35  
*Claude Y. Laporte, Mikel Doucet, Pierre Bourque, and Youssef Belkébir*

## Software Process Improvement

Software Verification Process Improvement Proposal Using Six Sigma ... 51  
*Tihana Galinac and Željka Car*

Software Development Improvement with SFIM .............................. 65  
*René Krikhaar and Martin Mermans*

SPI-KM - Lessons Learned from Applying a Software Process Improvement Strategy Supported by Knowledge Management ....... 81  
*Gleison Santos, Mariano Montoni, Sávio Figueiredo, and Ana Regina Rocha*
