Preface

The work group Human–Computer Interaction & Usability Engineering (HCI&UE) of the Austrian Computer Society (OCG) serves as a platform for interdisciplinary exchange, research and development. While human–computer interaction brings together psychologists and computer scientists, usability engineering is a discipline within software engineering.

It is essential that psychology research must be incorporated into software engineering at a systemic level. The aspect of integration of human factors into informatics is especially important, since it is here that innovations take place, systems are built and applications are implemented.

Our 2007 topic was “Human–Computer Interaction for Medicine and Health Care” (HCI4MED), culminating in the third annual Usability Symposium USAB 2007 on November 22, 2007 in Graz, Austria (<http://www.meduni-graz.at/imi/usab-symposium>).

Medical information systems are already extremely sophisticated and technological performance increases exponentially. However, *human cognitive evolution does not advance at the same speed*. Consequently, the focus on interaction and communication between humans and computers is of increasing importance in medicine and health care. The daily actions of medical professionals must be the central concern, surrounding and supporting them with new and emerging technologies.

Information systems are a central component of modern knowledge-based medicine and health services, therefore knowledge management needs to continually be adapted to the needs and demands of medical professionals within this environment of steadily increasing high-tech medicine. Information processing, in particular its potential effectiveness in modern health services and the optimization of processes and operational sequences, is of increasing interest.

It is particularly important for medical information systems (e.g., hospital information systems and decision support systems) to be designed with the end users in mind. Within the context of this symposium our end users are medical professionals and justifiably expect the software technology to provide a clear benefit; they expect to be supported efficiently and effectively in their daily activities.

This is a highly interdisciplinary field, producing specific problems; especially for younger researchers, who, being new to their field and not yet firmly anchored in one single discipline, are in danger of “falling between two seats.” It is much easier to gain depth and acknowledgement within a scientific community in one single field. While innovation and new developments often take place at the junction of two or more disciplines, this requires a broader basis of knowledge and much more effort.

Working in an interdisciplinary area, one needs the ability to communicate with professionals in other disciplines and a willingness to accept and incorporate their points of view. USAB 2007 was organized in order to promote this closer collaboration between software engineers, psychology researchers and medical professionals.

USAB 2007 received a total of 97 submissions. We followed a careful and rigorous two-level, double-blind review, assigning each paper to a minimum of three and

maximum of six reviewers. On the basis of the reviewer's results, 21 full papers (≥ 14 pages), 18 short papers, 1 poster and 1 tutorial were accepted.

USAB 2007 can be seen as a bridge, within the scientific community, between computer science and psychology. The people who gathered together to work for this symposium have displayed great enthusiasm and dedication.

I cordially thank each and every person who contributed toward making USAB 2007 a success, for their participation and commitment: the authors, reviewers, sponsors, organizations, supporters, the team of the Research Unit HCI4MED of the Institute of Medical Informatics, Statistics and Documentation (IMI), and all the volunteers. Without their help, this bridge would never have been built.

Finally, we are grateful to the Springer LNCS Team for their profound work on this volume.

November 2007

Andreas Holzinger

Sponsors

We are grateful to the following companies and institutions for their support in our aims to bridge science and industry. Their logos are displayed below.

Table of Contents

Formal Methods in Usability Engineering

User-Centered Methods Are Insufficient for Safety Critical Systems	1
<i>Harold Thimbleby</i>	
Improving Interactive Systems Usability Using Formal Description Techniques: Application to HealthCare	21
<i>Philippe Palanque, Sandra Basnyat, and David Navarre</i>	
Using Formal Specification Techniques for Advanced Counseling Systems in Health Care	41
<i>Dominikus Herzberg, Nicola Marsden, Corinna Leonhardt, Peter Kübler, Hartmut Jung, Sabine Thomanek, and Annette Becker</i>	

System Analysis and Methodologies for Design and Development

Nurses' Working Practices: What Can We Learn for Designing Computerised Patient Record Systems?	55
<i>Elke Reuss, Rochus Keller, Rahel Naef, Stefan Hunziker, and Lukas Furler</i>	
Organizational, Contextual and User-Centered Design in e-Health: Application in the Area of Telecardiology	69
<i>Eva Patricia Gil-Rodríguez, Ignacio Martínez Ruiz, Álvaro Alesanco Iglesias, José García Moros, and Francesc Saigí Rubió</i>	
The Effect of New Standards on the Global Movement Toward Usable Medical Devices	83
<i>Torsten Gruchmann and Anfried Borgert</i>	
Usability of Radio-Frequency Devices in Surgery	97
<i>Dirk Büchel, Thomas Baumann, and Ulrich Matern</i>	
BadIdeas for Usability and Design of Medicine and Healthcare Sensors	105
<i>Paula Alexandra Silva and Kristof Van Laerhoven</i>	
Physicians' and Nurses' Documenting Practices and Implications for Electronic Patient Record Design	113
<i>Elke Reuss, Rahel Naef, Rochus Keller, and Moira Norrie</i>	

Ambient Assisted Living and Life Long Learning

Design and Development of a Mobile Medical Application for the Management of Chronic Diseases: Methods of improved Data Input for Older People	119
<i>Alexander Nischelwitzer, Klaus Pintoffl, Christina Loss, and Andreas Holzinger</i>	
Technology in Old Age from a Psychological Point of View	133
<i>Claudia Oppenauer, Barbara Preschl, Karin Kalteis, and Ilse Kryspin-Exner</i>	
Movement Coordination in Applied Human-Human and Human-Robot Interaction	143
<i>Anna Schubö, Cordula Vesper, Mathey Wiesbeck, and Sonja Stork</i>	
An Orientation Service for Dependent People Based on an Open Service Architecture	155
<i>A. Fernández-Montes, J.A. Álvarez, J.A. Ortega, Natividad Martínez Madrid, and Ralf Seepold</i>	
Competence Assessment for Spinal Anaesthesia	165
<i>Dietrich Albert, Cord Hockemeyer, Zsuzsanna Kulcsar, and George Shorten</i>	

Visualization and Simulation in Medicine and Health Care

Usability and Transferability of a Visualization Methodology for Medical Data	171
<i>Margit Pohl, Markus Rester, and Sylvia Wiltner</i>	
Refining the Usability Engineering Toolbox: Lessons Learned from a User Study on a Visualization Tool	185
<i>Homa Javahery and Ahmed Seffah</i>	
Interactive Analysis and Visualization of Macromolecular Interfaces Between Proteins	199
<i>Marco Wiltgen, Andreas Holzinger, and Gernot P. Tilz</i>	
Modeling Elastic Vessels with the LBGK Method in Three Dimensions	213
<i>Daniel Leitner, Siegfried Wassertheurer, Michael Hessinger, Andreas Holzinger, and Felix Breitenecker</i>	

Usability of Mobile Computing and Augmented Reality

Usability of Mobile Computing Technologies to Assist Cancer Patients	227
<i>Rezwan Islam, Sheikh I. Ahamed, Nilothpal Talukder, and Ian Obermiller</i>	

Usability of Mobile Computing in Emergency Response Systems – Lessons Learned and Future Directions	241
<i>Gerhard Leitner, David Ahlström, and Martin Hitz</i>	

Some Usability Issues of Augmented and Mixed Reality for e-Health Applications in the Medical Domain	255
<i>Reinhold Behringer, Johannes Christian, Andreas Holzinger, and Steve Wilkinson</i>	

Designing Pervasive Brain-Computer Interfaces	267
<i>Nithya Sambasivan and Melody Moore Jackson</i>	

Medical Expert Systems and Decision Support

The Impact of Structuring the Interface as a Decision Tree in a Treatment Decision Support Tool	273
<i>Neil Carrigan, Peter H. Gardner, Mark Conner, and John Maule</i>	

Dynamic Simulation of Medical Diagnosis: Learning in the Medical Decision Making and Learning Environment MEDIC	289
<i>Cleotilde Gonzalez and Colleen Vrbin</i>	

SmartTransplantation - Allogeneic Stem Cell Transplantation as a Model for a Medical Expert System	303
<i>Gerrit Meixner, Nancy Thiels, and Ulrike Klein</i>	

Framing, Patient Characteristics, and Treatment Selection in Medical Decision-Making	315
<i>Todd Eric Roswarski, Michael D. Murray, and Robert W. Proctor</i>	

The How and Why of Incident Investigation: Implications for Health Information Technology	323
<i>Marilyn Sue Bogner</i>	

Research Methodologies, Cognitive Analysis and Clinical Applications

Combining Virtual Reality and Functional Magnetic Resonance Imaging (fMRI): Problems and Solutions	335
<i>Lydia Beck, Marc Wolter, Nan Mungard, Torsten Kuhlen, and Walter Sturm</i>	

Cognitive Task Analysis for Prospective Usability Evaluation in Computer-Assisted Surgery	349
<i>Armin Janß, Wolfgang Lauer, and Klaus Radermacher</i>	

Serious Games Can Support Psychotherapy of Children and Adolescents	357
<i>Veronika Brezinka and Ludger Hovestadt</i>	

Development and Application of Facial Expression Training System 365
Kyoko Ito, Hiroyuki Kurose, Ai Takami, and Shogo Nishida

Usability of an Evidence-Based Practice Website on a Pediatric
 Neuroscience Unit 373
Susan McGee, Nancy Daraiseh, and Myra M. Huth

Ontologies, Semantics, Usability and Cognitive Load

Cognitive Load Research and Semantic Apprehension of Graphical
 Linguistics 375
Michael Workman

An Ontology Approach for Classification of Abnormal White Matter in
 Patients with Multiple Sclerosis 389
*Bruno Alfano, Arturo Brunetti, Giuseppe De Pietro, and
 Amalia Esposito*

The Evaluation of Semantic Tools to Support Physicians in the
 Extraction of Diagnosis Codes 403
Regina Geierhofer and Andreas Holzinger

Ontology Usability Via a Visualization Tool for the Semantic Indexing
 of Medical Reports (DICOM SR) 409
Sonia Mhiri and Sylvie Despres

Agile Methodologies, Analytical Methods and Remote Usability Testing

Fostering Creativity Thinking in Agile Software Development 415
Claudio León de la Barra and Broderick Crawford

An Analytical Approach for Predicting and Identifying Use Error and
 Usability Problem 427
Lars-Ola Bligård and Anna-Lisa Osva lder

User’s Expertise Differences When Interacting with Simple Medical
 User Interfaces 441
Yuanhua Liu, Anna-Lisa Osva lder, and MariAnne Karlsson

Usability-Testing Healthcare Software with Nursing Informatics
 Students in Distance Education: A Case Study 447
