Pattern Recognition Using Neural and Functional Networks, 2009
Retracted Book: Pattern Recognition Using Neural and Functional Networks
Authors

Vasantha Kalyani David and S. Rajasekaran

About the Authors

Vasantha Kalyani David, PhD., is a Selection Grade Lecturer in Computer Science in Avinashilingam University for Women, Coimbatore. Earlier a mathematician with a Master of Philosophy in Mathematics and later did research in Computer Science. Dr. Vasantha Kalyani David has published many papers in areas of Soft Computing, Her research interests include Neural Networks, Artificial Intelligence, Fuzzy Logic, Genetic Algorithms, Cellular Automata, Theoretical Computer Science and Automata Theory.

S. Rajasekaran, DSc, (Civil Engineering) is Professor of Infrastructure Engineering., PSG College of Technology, Coimbatore. He has over 41 years of teaching and research experience and more than 300 research papers to his credit. His areas of special interest include Structural Engineering, Finite Element Analysis, and application of Soft Computing techniques in Structural Engineering.
Biologically inspired computing is different from conventional computing. It has a different feel; often the terminology does not sound like it’s talking about machines. The activities of this computing sound more human than mechanistic as people speak of machines that behave, react, self-organize, learn, generalize, remember and even to forget. Much of this technology tries to mimic nature’s approach in order to mimic some of nature’s capabilities. They have a rigorous, mathematical basis and neural networks for example have a statistically valid set on which the network is trained.

Two outlines are suggested as the possible tracks for pattern recognition. They are neural networks and functional networks. Neural Networks (many interconnected elements operating in parallel) carry out tasks that are not only beyond the scope of conventional processing but also cannot be understood in the same terms. Imaging applications for neural networks seem to be a natural fit. Neural networks love to do pattern recognition. A new approach to pattern recognition using microARTMAP together with wavelet transforms in the context of hand written characters, gestures and signatures have been dealt. The Kohonen Network, Back Propagation Networks and Competitive Hopfield Neural Network have been considered for various applications.

Functional networks, being a generalized form of Neural Networks where functions are learned rather than weights is compared with Multiple Regression Analysis for some applications and the results are seen to be coincident.

New kinds of intelligence can be added to machines, and we will have the possibility of learning more about learning. Thus our imaginations and options are being stretched. These new machines will be fault-tolerant, intelligent and self-programming thus trying to make the machines smarter. So as to make those who use the techniques even smarter.

**Chapter 1** is a brief introduction to Neural and Functional networks in the context of Pattern recognition using these disciplines **Chapter 2** gives a review of the architectures relevant to the investigation and the development of these technologies in the past few decades.
Chapter 3 begins with the look at the recognition of handwritten alphabets using the algorithm for ordered list of boundary pixels as well as the Kohonen Self-Organizing Map (SOM). Chapter 4 describes the architecture of the MicroARTMAP and its capability.

Chapter 5 the MicroARTMAP is augmented with a moment based feature extractor and applied to character recognition in this chapter. Chapter 6 illustrates the use of wavelet transforms together with MicroARTMAP for character recognition. The microARTMAP gave solutions to problems in civil engineering like classification of soil problem, finding the load from yield pattern of a plate and finding earthquake parameters from a given response spectrum.

Chapter 7 MicroARTMAP and Back Propagation Network have been compared and presented for gesture recognition and signature verification. Solving scheduling problem by means of a Competitive Hopfield Neural Network are discussed in Chapter 8 Multiple Regression methods considered as a recognizer is compared with functional networks in solving certain problems as shown in Chapter 9. Conclusion and further applications are suggested in Chapter 10.
# Contents

## 1 Retracted Chapter: Introduction

1.1 Introduction ............................................. 1  
1.2 Recognition through Algorithm and Kohonen’s Self Organizing Map ............................................. 1  
1.3 MicroARTMAP .......................................... 2  
1.4 Wavelet Transforms ....................................... 2  
1.5 Gesture Recognition ....................................... 3  
1.6 Competitive Hopfield Neural Network ....................... 4  
1.7 Neural and Functional Networks............................ 5  
1.8 Objectives and Scope of the Investigation .................... 5  
1.9 Organization of the Book .................................. 6  
1.10 Summary ................................................ 7

## 2 Retracted Chapter: Review of Architectures Relevant to the Investigation

2.1 Introduction ............................................. 9  
2.2 Recognition through Self Organizing Map ....................... 9  
2.3 The $\mu$ARTMAP ......................................... 10  
2.4 Wavelet Transforms and MicroARTMAP ....................... 10  
2.5 MicroARTMAP and Gesture Recognition ....................... 11  
2.6 Competitive Hopfield Neural Network ....................... 11  
2.7 Functional Networks and Multiple Regression Analysis .... 12  
2.8 Summary ................................................ 12

## 3 Retracted Chapter: Recognition of English and Tamil Alphabets Using Kohonen’s Self-organizing Map

3.1 Introduction ............................................. 15  
3.2 Recognition of Handwritten Characters Using Ordered List of Image Pixels on Its Boundary .................... 15  
3.3 The Kohonen Feature Map .................................. 18
4 Retracted Chapter: Adaptive Resonance Theory Networks

4.1 Introduction ........................................... 27
4.2 ART Network .......................................... 28
  4.2.1 Resonant State ........................................ 28
  4.2.2 The STM and LTM Traces .......................... 28
  4.2.3 The Structure of the ART Model .................. 30
  4.2.4 Pattern-Matching Cycle in an ART Network .... 31
  4.2.5 The 2/3 Rule .......................................... 31
  4.2.6 Gain Control Mechanism ............................ 32
4.3 Fuzzy ART .............................................. 33
  4.3.1 Analogy between ART1 and Fuzzy ART ............ 33
  4.3.2 Fast-Learn, Slow-Recode and Complement Coding . 34
  4.3.3 Complement Coding .................................. 34
  4.3.4 Weight Vectors ...................................... 36
  4.3.5 Parameters ........................................... 36
  4.3.6 Category Choice ...................................... 36
  4.3.7 Resonance or Reset .................................. 37
  4.3.8 Learning Law .......................................... 37
  4.3.9 Normalization of Fuzzy ART Inputs ................ 38
  4.3.10 Geometric Interpretation of Fuzzy ART .......... 39
  4.3.11 Fuzzy ART Category Boxes in Fuzzy Cubes ...... 39
  4.3.12 Fuzzy ART Stable Category Learning ............. 42
4.4 Fuzzy ARTMAP .......................................... 43
  4.4.1 Fuzzy ARTMAP and MicroARTMAP ................. 43
  4.4.2 MicroARTMAP Algorithm (Supervised Neural Network Architecture) ....................................... 44
  4.4.3 Map Field Activation ................................. 45
  4.4.4 Match Tracking ....................................... 45
  4.4.5 Map Field Learning .................................. 46
  4.4.6 Defining H .......................................... 46
  4.4.7 Training of μARTMAP ............................... 47
  4.4.8 Inter ART Reset ..................................... 47
  4.4.9 Offline Evaluation .................................... 48
  4.4.10 μARTMAP Prediction ............................... 48
5 Retracted Chapter: Applications of MicroARTMAP

5.1 Introduction ............................................. 51
5.2 Recognition of Handwritten Alphabets by $\mu$ARTMAP ........ 51
5.3 Recognition of Handwritten Words by $\mu$ARTMAP ............ 53
5.4 Recognition of Handwritten Alphabets by $\mu$ARTMAP Augmented with Moment-Based Feature Extractor ............... 53
5.4.1 Introduction ....................................... 53
5.4.2 Steps Involved in Obtaining Moment Invariants ......... 55
5.5 Recognition of Handwritten Numbers by $\mu$ARTMAP Using Hamming Distance .............................................. 59
5.6 Recognition of Alphabets and Numbers Using $\mu$ARTMAP with Only One Exemplar for Training .................. 60
5.7 Recognition of Alphabets by $\mu$ARTMAP with Increased Sample Size .................................................. 61
5.8 BIS Classification of Soil .................................... 61
5.9 Plasticization of Clamped Isotropic Plate .................... 64
5.10 Application to Earthquake Engineering ...................... 65
5.11 Summary ................................................ 71

6 Retracted Chapter: Wavelet Transforms and MicroARTMAP

6.1 Introduction ............................................... 73
6.2 The Need for Transforms ................................... 73
6.3 Fourier Transform ........................................ 73
6.4 Transforms Available ...................................... 74
6.5 Wavelet Transforms ....................................... 74
6.6 Continuous Wavelet Transforms (CWT) ....................... 75
6.7 Discrete Wavelet Transforms (DWT) ........................ 75
6.8 Wavelet Functions ......................................... 77
6.9 Wavelet Analysis ........................................... 77
6.10 Schematic Representation of the Working of a Wavelet ..... 78
6.11 Handwritten Characters Recognition Using Wavelet Transforms and MicroARTMAP .................................. 82
6.12 Wavelet Transforms in Two Dimensions ..................... 82
6.13 The Two-Dimensional DWT ................................ 84
6.14 Recognition of Handwritten Alphabets Using Wavelet Packets and MicroARTMAP ..................................... 85
7 Retracted Chapter: Gesture and Signature Recognition Using MicroARTMAP
   7.1 Introduction ............................................. 93
   7.2 Gestures ................................................ 93
   7.3 Gesture Recognition ...................................... 93
   7.4 Voice Recognition ...................................... 94
   7.5 Hand Writing Recognition .................................. 95
   7.6 Hand Gestures in HCI (Human – Computer Interaction) ...... 96
   7.7 Gesture Processing ...................................... 98
      7.7.1 Gesture Acquisition – Requirements .................. 98
      7.7.2 Gesture Preprocessing .................................. 99
      7.7.3 Feature Extraction .................................... 99
      7.7.4 Statistical Approach .................................. 99
      7.7.5 Block Processing ..................................... 101
   7.8 Wavelet Approach ........................................ 101
      7.8.1 DWT Selection ....................................... 103
   7.9 Neural Network for Gesture Recognition ....................... 103
      7.9.1 Application – Robotics – Robotic Arm Model .......... 104
   7.10 Interface Circuit ........................................ 106
   7.11 Back Propagation Network .................................. 107
   7.12 Statistical Approach ................................... 107
   7.13 Block Processing: For 16 Features .......................... 107
   7.14 Wavelet Approach ..................................... 110
   7.15 MicroARTMAP ............................................. 111
   7.16 Signature Recognition Using MicroARTMAP and Block Processing ........................................ 112
   7.17 Summary ................................................ 113

8 Retracted Chapter: Solving Scheduling Problems with Competitive Hopfield Neural Networks ....................... 115
   8.1 Introduction ............................................. 115
   8.2 The Energy Function ..................................... 115
   8.3 Algorithm ................................................. 117
   8.4 Simulation Example Case (i) ................................ 117
   8.5 Example Case (ii) ......................................... 119
   8.6 Summary ................................................ 122

List of Notations

$\varepsilon$ - belongs to
- strain

$<, =, >$ - either less than or equal to or greater than

$\forall$ - for all

$|.|$ - fuzzy count

$\wedge$ - fuzzy intersection

$\vee$ - fuzzy union

$\Rightarrow$ - implies

$\int$ - integral

$\oplus$ - includes operator

$\cap$ - intersection operator

$||$ - modulus operator

$|p|$ - norm of $p$ given by $\sum_{i=1}^{n} p_i$ where $p = (p_1, p_2, ..., p_n)$

$\tau$ - shear strength

$\sigma$ - normal stress

$\Sigma$ - summation

$\bigcup$ - union vector

$\int \int$ - double integral

$[0, 1]$ - closed interval between 0 and 1

$[0, 1]^n$ - fuzzy $n$-cube

$a$ - approximate signal

$a^c$ - fuzzy complement of $a$, i.e., $a = 1 - a$

$A$ - vector

$A'$ - normalized vector of $A$

$\text{ART}^a$ - fuzzy ART module

$\text{ART}^b$ - fuzzy ART module

$\text{BLU}$ - basic length unit

- Lead screw pitch / number of revolutions

$C$ - Cohesion intercept

$\text{CWT}$ - continuous wavelet transforms
C₁, C₂, C₃, C₄, C₅, C₆ - refer to weighting factors

\[ C(a, b) = \int_{-\infty}^{+\infty} f(x) \psi_{a,b}(x) \, dx \]

gives wavelet co-efficients

\[ C_{AN}(k) = \int_{-\infty}^{+\infty} f(x) \psi_{N,k}(x) \, dx \]

gives approximate co-efficients

\[ C_{DN}(k) = \int_{-\infty}^{+\infty} f(x) \psi_{N,k}(x) \, dx \]

gives detailed co-efficients

d - detailed version

d - Euclidean distance

DWT - discrete wavelet transforms

\[ e_j = f_1(x_{ij}) + f_2(x_{2j}) - f_3(x_{3j}) \]

e_j - error in the j-th data

E - Young’s modulus

E - Number of times stepper motor has to be energized

E - Energy function

E - Euclidean norm of error function

\[ E = \frac{1}{2} \sum_{i=1}^{n} (O_i - F(i))^2 \]

E - sum of the squares of the error for all data

\[ E = \sum_{j=1}^{n} e_j^T e_j \]

E_p - plastic modulus

E_p - entropy of parent node

E_A, E_H, E_V, E_D - entropy of four offsprings. Approximation, horizontal, vertical and diagonal details

E(f) - additive cost function

- approximate neural function

\[ f_i(x) = \sum_{j=1}^{m} a_{ij} \phi_{ij}(X) \]

F_{ab} - map field

F₁ → F₂ - mapping from F₁ to F₂

fₙ - cyclic frequency

g(n) - high pass filter

h - hamming distance

h_j - contribution to H of set A_j

h_{max} - upper bound on h_j
h(n)  - low pass filter
H  - conditional entropy
H_{max}  - upper bound on H
H(G_{ijk})  - heaviside function
H(B/A)  - conditional entropy
m_{pq}, p, q = 0, 1, 2, . . . , n  - moment transformation
M  - mass
\mathbf{M}  - earthquake magnitude
\mathbf{M}  - minimum step angle
\mathbf{M}  - total number of machines
\mathbf{M}, \mathbf{R}, \mathbf{S}, \mathbf{H}  - Magnitude, Site condition, Focal depth, Epicentral distance from response spectrum
m  - strain rate sensitivity index
N  - total number of processes
Net_{ijk}  - total input to the neuron (i, j, k)
n  - strain hardening exponent
\mathbf{P_i}  - required execution time required by a process
R  - required angle
\mathbf{R}  - augmented function
R = E + \langle a \rangle [\phi_0] [\lambda] - \langle \lambda \rangle \{\alpha\}
R = \langle a \rangle [\alpha] + \langle a \rangle + \langle a \rangle \{\phi_0 \} [\lambda] - \langle \lambda \rangle \{\alpha\}
R_{is}  - process i requires resource s
t  - thickness of the plate
\mathbf{T}  - maximum time quantum of a process
\mathbf{T_j}  - choice function
\mathbf{T_n}  - natural vibration period
\mathbf{V_{ijk}}  - state variable representing whether or not a job i is executed on a machine j at a certain time k
\mathbf{W}_{new}  - updated weight vector
\mathbf{W}_{old}  - old weight vector
\mathbf{W}_{xyzijk}  - synaptic interconnection strength
\mathbf{W}_\mathbf{\phi}, \mathbf{W}_\mathbf{\psi}^H, \mathbf{W}_\mathbf{\psi}^V and \mathbf{W}_\mathbf{\psi}^D  - quarter size output subimages
\mathbf{x(n)}  - original signal
x(n)* h(n) = \sum_{k=-\infty}^{+\infty} x(k) * h(n - k)
\mathbf{y_{high}}(k)  - output of high pass filter
\mathbf{y_{low}}(k)  - outputs of low pass filter
\mathbf{\alpha}  - choice parameter
\mathbf{\beta}  - material thermal constant
\mathbf{\delta(a,b)}  - Kronecker delta function
\mathbf{\phi}  - shape functions (1, x, x^2, . . . , x^n) or (1, \sin(x), \cos(x), \sin(2x), \cos(2x), \sin(3x), \cos(3x)........)
\mathbf{\phi}  - angle of internal friction
XXII   List of Notations

\[ \phi_1, \phi_2, \phi_3, \phi_4, \phi_5, \phi_6, \phi_7 \] - invariant functions
\[ \eta_{pq} \] - normalized central moments
\[ \phi(x, y) \] - two dimensional scaling function
\[ \phi_{i, m, n}(x, y) \] - scaled basis function
\[ \mu_{pq} \] - central moments
\[ \mu \text{ARTMAP} \] - microARTMAP
\[ \nu \] - Poisson ratio
\[ \theta_{ijk} \] - bias input
\[ \rho \] - vigilance parameters
\[ \sigma_0 \] - yield stress
\[ \psi(x) \] - wavelet function
\[ \psi(u) \] - Fourier transform
\[ \psi_{a, b}(x) \] - mother wavelet generates basis functions
\[ \psi^D(x, y) \] - variations along diagonals
\[ \psi^H(x, y) \] - variations along columns (horizontal)
\[ \psi^V(x, y) \] - variations along rows (vertical)
\[ \psi_{i, j, m, n}(x, y) \] - translated basis function
\[ \omega_n \] - circular frequency
\[ \frac{\partial(\cdot)}{\partial(\cdot)} \] - partial derivative
\[ 2/3 \text{ rule} \] - two out of possible three inputs are active
