2nd International Workshop on Practical Applications of Computational Biology and Bioinformatics (IWPACBB 2008)

Springer
The success of Bioinformatics in recent years has been prompted by research in molecular biology and medicine in initiatives like the human genome project. The volume and diversification of data has increased so much that it is very hard if not impossible to analyze it by human experts.

The analysis of this growing body of data, intensified by the development of a number of high-throughput experimental techniques that are generating the so called 'omics' data, has prompted for new computational methods. New global approaches, such as Systems Biology, have been emerging replacing the reductionist view that dominated biology research in the last decades, requiring the coordinated efforts of biological researchers with those related to data analysis, mathematical modelling and computer science. Computational methods have been helping in tasks related to knowledge discovery, modelling and optimization tasks.

This workshop brings the opportunity to discuss applications of Bioinformatics and Computational Biology exploring the interactions between computer scientists, biologists and other scientific researchers. The IWPACBB technical program includes 29 papers (23 long papers and 6 short papers) selected from a submission pool of 51 papers, from 9 different countries.

We thank the excellent work of the local organization members and also from the members of the Program Committee for their excellent reviewing work.

## Contents

### Applications

**Comparing Time Series through Event Clustering**  
*Juan A. Lara, Aurora Pérez, Juan P. Valente, África López-Illescas*  
---  
**Visual Knowledge-Based Metaphors to Support the Analysis of Polysomnographic Recordings**  
*Abraham Otero, Paulo Félix, Carlos Zamarrón*  
---  
**A Bio-inspired Proposal for Focus Attention While Preserving Information**  
*O. Bolívar Toledo, J.C. Quevedo Losada, J.A. Muñoz Blanco*  
---  
**Modelling Fed-Batch Fermentation Processes: An Approach Based on Artificial Neural Networks**  
*Eduardo Valente, Isabel Rocha, Miguel Rocha*  

### Treatment and Diagnosis

**New Principles and Adequate Control Methods for Insulin Dosage in Case of Diabetes**  
*Levente Kovács*  
---  
**A Framework for CBR Development and Experimentation with Application to Medical Diagnosis**  
*Beatriz López, Pablo Gay, Albert Pla, Carles Pous*  
---  
**Identification of Relevant Knowledge for Characterizing the Melanoma Domain**  
*Ruben Nicolas, Elisabet Golobardes, Albert Fornells, Susana Puig, Cristina Carrera, Josep Malvehy*
