Preface

Computational collective intelligence (CCI) is most often understood as a subfield of artificial intelligence (AI) dealing with soft computing methods that enable group decisions to be made or knowledge to be processed among autonomous units acting in distributed environments. The needs for CCI techniques and tools have grown significantly recently as many information systems work in distributed environments and use distributed resources. Web-based systems, social networks and multi-agent systems very often need these tools for working out consistent knowledge states, resolving conflicts and making decisions. Therefore, CCI is of great importance for today’s and future distributed systems.

Methodological, theoretical and practical aspects of computational collective intelligence, such as group decision making, collective action coordination, and knowledge integration, are considered as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., can support human and other collective intelligence and create new forms of CCI in natural and/or artificial systems. Three subfields in the application of computational intelligence technologies to support various forms of collective intelligence are gaining special attention but they are not the only ones: Semantic Web (as an advanced tool increasing collective intelligence), social network analysis (as the field targeted to the emergence of new forms of CCI), and multiagent systems (as a computational and modeling paradigm especially tailored to capture the nature of CCI emergence in populations of autonomous individuals).

The aim of this conference series (International Conference on Computational Collective Intelligence - ICCCI) is to provide an internationally respected forum for scientific research in the computer-based methods of collective intelligence and their applications in (but not limited to) such fields as the Semantic Web, social networks and multiagent systems.

This volume of the LNCS/LNAI series contains the proceedings of the first event in the ICCCI series (ICCCI 2009) which was held in Wroclaw, Poland, during October 5–7, 2009. The conference was organized by Wroclaw University of Technology (Poland) in cooperation with Swinburne University of Technology (Australia) and National Taiwan University of Science and Technology (Taiwan). The conference attracted a large number of scientists and practitioners who submitted their papers for four main tracks covering the methodology and applications of computational collective intelligence and three special sessions on specific topics within the field. Each paper was reviewed by two to four members of the International Program Committee. Many of them were reviewed using the double-blind mode. From the submissions for ICCCI 2009 coming from more than 25 countries throughout the world, only 71 papers were selected to be published in the proceedings.
The Program Committee defined the following main topics as related to CCI:

- **Semantic Web**: semantic annotation of Web data resources; Web Services (service description, discovery, composition); ontology management (mediation and reconciliation, creation, evaluation, merging, alignment, evolution, linking); automatic metadata generation; (semi-) automatic ontology creation; Semantic Web inference schemes; reasoning in the Semantic Web; knowledge portals; information discovery and retrieval in the Semantic Web; etc.

- **Social Networks**: computational technologies in social networks creation and support; advanced groupware and social networks; models for social network emergence and growth; ontology development in social networks; advanced analysis for social networks dynamics; social networks and semantic communication.

- **Multiagent Systems**: cooperative distributed problem solving; task and resource allocation; mechanism design, auctions, and game theory; modeling other agents and self; multiagent planning; negotiation protocols; multiagent learning; conflict resolution; trust and reputation management; privacy, safety and security; scalability, robustness and dependability; social and organizational structures; verification and validation; novel computing paradigms (autonomic, grid, P2P, ubiquitous computing); brokering and matchmaking; agent-oriented software engineering, including implementation languages and frameworks; mobile agents; performance, scalability, robustness, and dependability; verification and validation; E-business agents; pervasive computing; privacy, safety, and security.

We would like to thank the invited speakers – Roman Słowiński (Poland), Pierre Lévy (Canada), and Piotr Jędrzejowicz (Poland) – for their interesting and informative talks of world-class standard.

Special thanks go to the Organizing Chair (Radoslaw Katarzyniak) for his efforts in the organizational work. Thanks are due to the Program Committee and the board of reviewers, essential for reviewing the papers to ensure their high quality. We thank the members of the Local Organizing Committee, Publicity Chairs and Special Sessions Chairs. We acknowledge with gratitude the efforts of the Foundation for Development of Wroclaw University of Technology for coordinating the organization of the conference. We extend cordial thanks to the Institute of Informatics and the Faculty of Computer Science of Wroclaw University of Technology for the supports with the administration and network services. Finally, we thank the authors, presenters and delegates for their valuable contribution to this successful event.

Thanks are also due to the many other experts who contributed to making the event a success.

We hope that ICCCI 2009 has significantly contributed to the fulfillment of academic excellence and will lead to even greater successes of ICCCI events in the future.

October 2009

# Table of Contents

## Keynote Speeches

Rough Set Approach to Knowledge Discovery about Preferences

*Roman Slowiński*

Toward a Self-referential Collective Intelligence: Some Philosophical Background of the IEML Research Program

*Pierre Lévy*

A-Teams and Their Applications

*Piotr Jędrzejowicz*

## Collective Decision Making

Local Search Algorithms for Core Checking in Hedonic Coalition Games

*Helena Keinänen*

Information Foraging Theory as a Form of Collective Intelligence for Social Search

*Longo Luca, Barrett Stephen, and Dondio Pierpaolo*

SAM: Semantic Argumentation Based Model for Collaborative Knowledge Creation and Sharing System

*Krissada Maleewong, Chutiporn Anutariya, and Vilas Wuwongse*

A Conception for Modification of Learning Scenario in an Intelligent E-learning System

*Adrianna Kozierkiewicz-Hetmańska*

Firefly Algorithm for Continuous Constrained Optimization Tasks

*Szymon Lukasik and Sławomir Żak*

Distributed Data Mining Methodology with Classification Model Example

*Marcin Gorawski and Ewa Pluciennik-Psota*

A Token-Based Mutual Exclusion Approach to Improve Collaboration in Distributed Environments

*Mauricio Paletta and Pilar Herrero*

Discovering Medical Knowledge from Data in Patients’ Files

*Magdalena Szymkowiak and Beata Jankowska*
Towards an Increase of Collective Intelligence within Organizations
Using Trust and Reputation Models ........................................ 140
Emil Scarlat and Iulia Maries

A New Ant Colony Optimization Algorithm with an Escape Mechanism for Scheduling Problems .................................................. 152
Tsai-Duan Lin, Chuin-Chieh Hsu, Da-Ren Chen, and Sheng-Yung Chiu

Recognizing Team Formations in Multiagent Systems: Applications in Robotic Soccer ............................................................. 163
Huberto Ayanegui-Santiago

Semi-traces and Their Application in Concurrency Control Problem .... 174
Hoang Chi Thanh

Design of the Directory Facilitator Supporting Fault-Tolerance in Multi-OSGi Agent System ...................................................... 183
Sang-Hwan Ryu, Seung-Hyun Lee, Kyung-Soo Jang, Ho-Jin Shin, and Dong-Ryeol Shin

Multiagent Systems

Agent-Based Provisioning of Group-Oriented Non-linear Telecommunication Services ................................................................. 193
Vedran Podobnik, Ana Petric, Krunoslav Trzec, Vedran Galetic, and Gordan Jezic

A Multi-agent Model of Deceit and Trust in Intercultural Trade ......... 205
Gert Jan Hofstede, Catholijn M. Jonker, and Tim Verwaart

Implementation of Epistemic Operators for Model Checking Multi-agent Systems ................................................................. 217
Marina Bagić Babac and Marijan Kunštić

Meta-game HOLOS as a Multi-agent Decision-Making Laboratory ...... 229
Rolislaw J. Kolbusz, Romuald Kotowski, and Krzysztof Kasianiuk

Agent-Based Computational Modeling of Emergent Collective Intelligence ................................................................. 240
Vivek Kumar Singh, Divya Gautam, Rishi Raj Singh, and Ashok K. Gupta

Fuzzy Cognitive and Social Negotiation Agent Strategy for Computational Collective Intelligence .................................................. 252
