Preface

The Second International Conference on Advances in Communication, Network, and Computing – CNC 2011 – is organized every year to bring together in a common forum innovative academics and industrial experts in the field of computer science, information technology, computational engineering, communication and network. The conference will be held every year to make it an ideal platform for people to share views and experiences in information, telecommunication, computing techniques and related areas. CNC 2011 was organized by The Association of Computer Electronics and Electrical Engineers (ACEEE) during March 10–11, 2011 in Bangalore, Karnataka, India.

This volume contains 130 papers selected through a rigorous reviewing process. The contributions reflect the richness of research on topics within the scope of the conference and represent several important developments, specifically focused on theoretical foundations and methods for information technology and computer networks.

Organizing a conference like this one is not possible without the assistance and continuous support of many people and institutions. Particularly, I would like to express my gratitude to the organizers of sessions on dedicated topics that took place during the conference.

I also thank Stefan Goeller, Janahanlala Stephen, R. Vijay Kumar, and Yoghesh Chaba for the constant support and guidance. I would like to express my gratitude to the Springer LNCS-CCIS editorial team, especially Ms. Leonie Kunz, for producing such a wonderful quality proceedings book.
