Abstract

The increasing presence of mobile robots in our everyday lives introduces the requirements for their intelligent and autonomous features. Therefore the next generation of mobile robots should be more self-capable, in respect to: increasing of their functionality in unforeseen situations, decreasing of the human involvement in their everyday operations and their maintenance; being robust; fault tolerant and reliable in their operation.

Although mobile robotic systems have been a topic of research for decades and aside the technology improvements nowadays, the subject on how to program and making them more autonomous in their operations is still an open field for research.

The classical formal methodologies which have been "dominating" the robotics segment for long time start to prove that they are perhaps not adequate to cope with the increasing complexity of the robotic systems. Many different research directions have been considered on how to overcome these problems.

Applying bio-inspired, organic approaches in robotics domain is one of the methodologies that are considered that would help on making the robots more autonomous and self-capable, i.e. having properties such as: self-reconfiguration, self-adaptation, self-optimization, etc.

In this book several novel biologically inspired approaches for walking robots (multi-legged and humanoid) domain are introduced and elaborated.

They are related to self-organized and self-stabilized robot walking, anomaly detection within robot systems using self-adaptation, and mitigating the faulty robot conditions by self-reconfiguration of a multi-legged walking robot. The approaches presented have been practically evaluated in various test scenarios, the results from the experiments are discussed in details and their practical usefulness is validated.

Contents

1	Introduction	1
2	Biologically Inspired Computing and Self-x Properties	5
2.1	Bionics	5
2.2	Organic Computing	6
2.3	Autonomic Computing	6
2.4	Self-x Properties	6
2.5	Emergence	7
3	Joint Leg Walking and Hybrid Robot Demonstrators	9
3.1	Introduction	9
3.2	Hexapod Robots.....	9
3.2.1	State of the Art – Hexapod Robots.....	11
3.2.2	Hexapod Robot Demonstrator – OSCAR (Organic Self Configuring and Adapting Robot)	11
3.3	Humanoid Robots	17
3.4	State of the Art Humanoid Robots.....	17
3.5	Humanoid Robot Demonstrator - S2-HuRo (Self Stabilizing Humanoid Robot)	19
4	Biologically Inspired Robot Control Architecture.....	23
4.1	Overview on “Standard” Types of Robot Control Architectures.....	24
4.1.1	Reactive and Subsumption and Behavior Based Control Architecture	24
4.1.2	Deliberative Control Architecture.....	25
4.1.3	Hybrid Control Architecture	26
4.2	Overview on Autonomic Control Architecture.....	27
4.3	ORCA (Organic Robot Control Architecture)	29
4.4	Distributed ORCA Architecture for Hexapod Robot Control.....	30
4.5	Cell Differentiation as Biological Inspiration for Enhanced ORCA.....	31
4.5.1	Overview of a Biological Concept – Cell Differentiation.....	31
4.5.2	The Enhanced “Stem” Type ORCA Architecture.....	32
5	Biologically Inspired Approaches for Locomotion of a Hexapod Robot OSCAR.....	35
5.1	Characteristics of Locomotion Seen by Insects and Animals - Applied to Robotics Domain.....	35
5.2	Central Pattern Generators (CPG)	37

5.2.1	Common Observed Gaits by Insects	38
5.3	Experiments with Self-organizing Emergent Robot Walking Gait with Distributed Pressure on Robot's Feet.....	39
5.4	Firefly Inspired Synchronization of a Robot's Walking Gait	45
5.4.1	Firefly Coupled Oscillators Principle	46
5.4.2	Concept for Robot Walking Gait Self-synchronization by Using Firefly Synchronization.....	47
5.5	Implementation of Firefly Inspired Self-synchronization into the Robot Control Architecture	55
5.6	Experiments Done with Firefly Inspired Self-synchronization and Results from Experiments.....	56
5.6.1	Experiment about Self-synchronization by Prolongation of the Robot's Swing and Stance Phases	57
5.6.2	Experiment about Self-synchronization by Shortening of the Robot's Swing and Stance Phases	60
5.6.3	Experiment about Self-synchronization by Combined Prolongation and Shortening of the Robot's Swing and Stance Phases	62
5.6.4	Discussion on Future Possible Improvements of Firefly Inspired Self-synchronization Approach	66
5.6.5	Summary about the Firefly Inspired Self-synchronization Approach.....	66
6	Biologically Inspired Approach for Optimizing the Walking Gait of a Humanoid Robot.....	67
6.1	Approaches for Walking Gait Generation by Humanoid Robots.....	67
6.2	Symbiosis as a Biologically Inspired Approach for Self-stabilization of Humanoid Robot Walking Gait.....	69
6.3	SelSta Approach in Detail.....	71
6.3.1	S2-HuRo Humanoid Robot Platform and Sensors Used.....	71
6.3.2	Control of the Robot S2-HuRo.....	72
6.3.3	Main Parts of SelSta Approach – SymbScore Value and Genetic Algorithm	74
6.3.4	Fuzzy Logic Computation of SymbScore Value.....	78
6.3.5	Genetic Algorithm Details for the SelSta Approach	84
6.3.6	Preparation for Experiments.....	85
6.4	Experiments Done with the SelSta Approach.....	88
6.4.1	Experiments on a Soft Green Carpet.....	89
6.4.2	Experiments on a Medium Soft Orange Carpet	97
6.4.3	Experiments on a Hard Green Carpet	106
6.4.4	Experiments on a Hard Linoleum Surface	115
6.5	Summary for Experiments Done with the SelSta Approach.....	124
7	Biologically Inspired Approaches for Anomaly Detection within a Robotic System.....	127
7.1	Overview on Approaches for Fault / Anomaly Detection by Robotic Systems	127

7.2	Overview of Artificial Immune System (AIS) Concept	128
7.3	Artificial Immune System Based - Robot Anomaly Detection Engine (RADE) Approach.....	131
7.3.1	Core Functionality of RADE Approach.....	134
7.4	Experiments Done with AIS Inspired RADE and Results from Experiments	135
7.4.1	Test-Bed Setup for RADE Approach.....	135
7.4.2	Self and Non-self Rule Sets by RADE	136
7.4.3	Results from Experiments Done with the RADE Approach.....	138
7.4.4	3D representation of Run-Time Dynamics by RADE Anomaly Detection Surface.....	147
7.4.5	Summary about AIS Based Anomaly Detection Approach - RADE	150
8	Approach for Robot Self-reconfiguration after Anomaly Detection within a Walking Robot System Based on Biological Inspiration - Swarm Intelligence	151
8.1	Overview on Swarm Intelligence – Flocking Behavior and Boids.....	152
8.2	S.I.R.R. – Swarm Intelligence Based Approach for Robot Reconfiguration	155
8.2.1	Simulation of S.I.R.R Based Hexapod Robot Reconfiguration	158
8.3	Results from Robot Reconfiguration Experiments Done with S.I.R.R. Approach on the Hexapod Robot OSCAR-2	161
8.4	Results from Real Robot Reconfiguration Experiments Done with S.I.R.R. Approach and Leg Amputations on the Robot OSCAR-X	162
8.4.1	Ground Contacts of Robot Legs for Normal Walking and for Walking with Leg Amputations and Robot Self-reconfiguration	164
8.4.2	Tracking of the Robot’s Heading While the Robot Is Performing Self-reconfiguration with Leg Amputations	166
8.5	Summary for the S.I.R.R. - Biologically Inspired Robot Reconfiguration Approach.....	173
9	Conclusion and Outlook.....	175
10	References.....	179
