Preface

The first volume of this series has been issued in 1991. Since that time a remarkable progress in the knowledge of phase equilibria, of thermodynamic properties in general, as well as of crystal structure of binary alloys has been obtained. This was realized to such an extent that now it should be possible and necessary to compile critically this quantity in supplement volumes. As hitherto, the text should be kept concise. Literature (up to about 1990) should only be mentioned if it is most essential to clarify the new data or to close a gap of information.
