

**BIOLOGICAL AND MEDICAL PHYSICS,
BIOMEDICAL ENGINEERING**

BIOLOGICAL AND MEDICAL PHYSICS, BIOMEDICAL ENGINEERING

The fields of biological and medical physics and biomedical engineering are broad, multidisciplinary and dynamic. They lie at the crossroads of frontier research in physics, biology, chemistry, and medicine. The Biological and Medical Physics, Biomedical Engineering Series is intended to be comprehensive, covering a broad range of topics important to the study of the physical, chemical and biological sciences. Its goal is to provide scientists and engineers with textbooks, monographs, and reference works to address the growing need for information.

Books in the series emphasize established and emergent areas of science including molecular, membrane, and mathematical biophysics; photosynthetic energy harvesting and conversion; information processing; physical principles of genetics; sensory communications; automata networks, neural networks, and cellular automata. Equally important will be coverage of applied aspects of biological and medical physics and biomedical engineering such as molecular electronic components and devices, biosensors, medicine, imaging, physical principles of renewable energy production, advanced prostheses, and environmental control and engineering.

Preface

Biomedical optics is a rapidly growing area of research that has passed the “tipping point” for technology transfer, with significant momentum toward commercialization. Designing an imaging technique to meet the specific application requirements is one of the keys in the development and commercialization of new imaging technologies. It requires a solid understanding of imaging technologies and special requirements for imaging applications; it also encompasses the selection of optical configurations, light sources, optical components, detectors, illumination and imaging system designs, and testing.

This book will provide an introduction to principles, designs, and applications of a number of imaging technologies, including spectroscopy, photoacoustic, fluorescence, hyperspectral, optical coherence tomography, confocal, multiphoton, endomicroscopy, multimodal imaging, and multimodal tomography. Each chapter covers (1) principles and limitations of optical imaging technology; (2) system design and practical implementation for one or two specific applications, including design guidelines, system configuration, optical design, component requirements and selection, system optimization, and design examples; and (3) recent advances and applications in biomedical researches and clinical imaging.

There are many books on principles and applications of biomedical optical imaging technologies; however, there is no book covering the topics of detailed design and implementation for different biomedical optical imaging modalities. This book is intended to fill this gap by giving interested readers the fundamental knowledge necessary for planning and designing successful biomedical imaging techniques for their specific application. This book can be used as a reference book for students and professionals in optics and biomedical engineering. The reader can learn the fundamentals, design principles, and implementations of biomedical optical imaging technologies.

I thank the authors for their excellent contributions. I also thank Dr. Claus E. Ascheron and the editorial staff of Springer Press for their contribution to the success of this book.

Contents

1	Advanced Spectroscopy Technique for Biomedicine	1
	Jianhua Zhao and Haishan Zeng	
1.1	Introduction	1
1.2	Components for Spectroscopy System	2
1.2.1	Light Sources	3
1.2.2	Optical Fibers	6
1.2.3	Spectrograph/Monochromator	9
1.2.4	Filters and Polarizers	10
1.2.5	Detectors	13
1.2.6	Spectroscopy System Calibration	19
1.3	Advanced Spectroscopy Systems	20
1.3.1	Real-Time Raman Spectroscopy System for Skin Diagnosis	21
1.3.2	Real-Time Raman Spectroscopic System for Endoscopic Lung Cancer Detection	27
1.3.3	In Vivo Confocal Raman Spectroscopy System	30
1.3.4	Other Advanced Spectroscopy Systems	33
1.4	Applications of Raman Spectroscopy in Biomedicine	35
1.4.1	Skin Cancer Diagnosis	35
1.4.2	Lung Cancer Diagnosis	37
1.4.3	Colon Cancer Diagnosis	39
1.4.4	Oral Cancer Diagnosis	40
1.4.5	Gastric Cancer Diagnosis	41
1.4.6	Breast Cancer Diagnosis	43
1.4.7	Cervical Cancer Diagnosis	45
1.4.8	Other Applications	46
1.5	Summary	47
	References	48

2	Three-Dimensional Optical-Resolution Photoacoustic Microscopy ...	55
	Song Hu, Konstantin Maslov, and Lihong V. Wang	
2.1	Introduction	55
2.2	Principle and System Design	56
2.3	System Configuration	58
2.4	System Alignment	60
2.5	Typical Experimental Procedures	61
2.6	Functional Imaging Design	63
2.6.1	Spectroscopic Measurement of Oxygen Saturation of Hemoglobin	63
2.6.2	Photoacoustic Doppler Measurement of Blood Flow Velocity	64
2.7	Laser Safety	66
2.7.1	Laser Safety for Ophthalmic Imaging [11, 25]	66
2.7.2	Laser Safety for Skin Imaging [25]	68
2.8	Recent Technical Advances	69
2.8.1	New Scanning Mechanism	69
2.8.2	Integration with Optical Coherence Tomography	71
2.9	An Example Application: Wound Healing Monitoring	72
2.10	Perspectives	74
	References	75
3	Fluorescence Microscopy Imaging in Biomedical Sciences	79
	Yuansheng Sun and Ammasi Periasamy	
3.1	Introduction	79
3.2	Basics of Fluorescence and Fluorescent Probes	80
3.3	Fluorescence Microscopy Techniques	82
3.3.1	Widefield Epifluorescence Microscopy	82
3.3.2	Single-Photon Excitation (SPE) Confocal Microscopy ...	83
3.3.3	Two-Photon Excitation (TPE) Microscopy	84
3.3.4	FRET Microscopy	86
3.3.5	Other Advanced Microscopy Techniques	89
3.4	FLIM and Implementation of a TPE-TCSPC FLIM System	91
3.4.1	Overview of FLIM Techniques and Applications	91
3.4.2	Design of the TPE-TCSPC FLIM System	94
3.4.3	Measuring the Instrument Response Function (IRF) of the TPE-TCSPC FLIM System	96
3.4.4	Calibration of the TPE-TCSPC FLIM System Using Fluorescence Lifetime Standards	97
3.4.5	Verifying the TPE-TCSPC FLIM System for FRET Studies Using FRET Standards	98
3.4.6	Detecting Protein-Protein Interactions in Living Cells with TPE-TCSPC FLIM-FRET	99
3.5	Conclusion and Outlook	101
	References	102

4	Spectral Imaging: Methods, Design, and Applications	111
	Yuval Garini and Elad Tauber	
4.1	Introduction	111
4.2	Imaging and Spectroscopy	112
4.2.1	Imaging Fundamentals	112
4.2.2	Spectroscopy	115
4.3	Spectral Imaging System Configuration	119
4.3.1	The Principles of Spectral Imaging Systems	119
4.3.2	Spectral Imaging Challenge: Information Versus Time	121
4.4	Optical Configurations and System Design	122
4.4.1	Methods that Compromise Spectral Performance	122
4.4.2	Wavelength-Scan Methods	125
4.4.3	Spatial-Scan Methods	131
4.4.4	Fourier-Based Spectral Imaging	137
4.4.5	Full Spectral Images in a Single Shot	142
4.4.6	Illumination-Scan Spectral Imaging	145
4.5	System Requirements	146
4.5.1	System Configuration	147
4.5.2	Acquisition Software Requirements	147
4.5.3	Spectral Image Analysis	149
4.6	Applications	153
4.6.1	Observation of Combinatorial-Labeled Entities	153
4.6.2	Observation of Mixed Stained Entities with Known Stains	154
4.6.3	Observation of Spectra from Unknown Source	156
4.7	Discussion and Conclusions	158
