Preface

Welcome to the proceedings of the 2012 Chinese Conference on Pattern Recognition (CCPR 2012) in Beijing! The CCPR 2012 was the fifth in the series, following CCPR 2007 (Beijing), CCPR 2008 (Beijing), CCPR 2009 (Nanjing), and CCPR 2010 (Chongqing). From 2012, the CCPR will be held every other year, to be alternated with the Asian Conference on Pattern Recognition (ACPR), which was started in 2011.

In recent years, pattern recognition has increasingly become an enabling technology for many important and often mission-critical applications such as intelligent machines, data mining, business intelligence, Internet content search, public security monitoring, etc. The aim of CCPR is to provide a forum for scientific exchanges and exhibitions for pattern recognition researchers in China. CCPR in its current form was started in 2007 but the event can be dated back to the 1980s. In China, pattern recognition research commenced at the beginning of the 1970s. To cater for this fascinating area, the Chinese Association of Automation (CAA) formed a technical committee on Pattern Recognition and Machine Intelligence (PRMI) in 1979. This committee became an official member of the IAPR in 1981. In 1980, the First National Conference on Pattern Recognition and Machine Intelligence was organized, and these conferences were held seven times, until 1989.

As in the past, CCPR 2012 received regular submissions and invited internationally renowned researchers to give keynote speeches. By the deadline of May 30, we had received 137 full submissions. Each submission was reviewed by three reviewers selected from the program committee and other qualified researchers. Based on the reviewers' reports, 82 papers were accepted for presentation at the conference, covering diverse fields with 13 in pattern recognition theory, 17 in computer vision, 13 in biometric recognition, 9 in medical imaging, 10 in image and video analysis, 5 in document analysis, 8 in speech processing, and 7 in natural language processing and information retrieval.

We are grateful to the keynote speakers, Prof. Tomaso Poggio of Massachusetts Institute of Technology (USA) and Prof. Massimiliano Pontil of University College London (UK). They gave speeches titled "A New Theory of Invariant Recognition in Visual Cortex" and "Multi-task Learning: Theory and Practice", respectively. Thanks are due to the authors of all submitted papers, the program

committee members and the reviewers, and the staff of the organizing committee. Without their contribution, this conference would not have been a success. We are also grateful to Springer for publishing the proceedings, and especially to Ms Celine (Lanlan) Chang and Ms Leonie Kunz of Springer for their efforts and patience in collecting and editing the proceedings.

Table of Contents

Section I: Pattern Recognition Theory

| | |
|--|----|
| Enhanced Iterative Projection for Subclass Analysis under EM Framework | 1 |
| <i>Yuting Tao and Jian Yang</i> | |
| Efficient Group Learning with Hypergraph Partition in Multi-task Learning | 9 |
| <i>Quanming Yao, Xiubao Jiang, Mingming Gong, Xinge You, Yu Liu, and Duanquan Xu</i> | |
| Grassmannian Manifolds Discriminant Analysis Based on Low-Rank Representation for Image Set Matching | 17 |
| <i>Xuan Lv, Gang Chen, Zhicheng Wang, Yufei Chen, and Weidong Zhao</i> | |
| Neighborhood Structure Preserving Ridge Regression for Dimensionality Reduction | 25 |
| <i>Xin Shu and Hongtao Lu</i> | |
| Qualitative Graphical Inference with Enhanced Knowledge Fusion | 33 |
| <i>Zehua Zhang, Duoqian Miao, Jin Qian, and Lei Wang</i> | |
| Random Walk Classifier Framework on Graph | 41 |
| <i>Xiaohua Xu, Lin Lu, Ping He, Zhoujin Pan, and Ling Chen</i> | |
| Multiple Kernel Sparse Representation Based Classification | 48 |
| <i>Hao Zheng, Fan Liu, and Zhong Jin</i> | |
| Sparsity Preserving Canonical Correlation Analysis | 56 |
| <i>Chen Zu and Daoqiang Zhang</i> | |
| Determining Reservoir Topologies from Short-Term Memory in Echo State Networks | 64 |
| <i>Qianli Ma and Weibiao Chen</i> | |
| Constructing Class Hierarchy via Adaptive Kernel Learning | 72 |
| <i>Yanting Lu, Jianfeng Lu, Liantao Wang, and Jingyu Yang</i> | |
| Iterative Laplacian Score for Feature Selection | 80 |
| <i>Lingling Zhu, Linsong Miao, and Daoqiang Zhang</i> | |
| Robust Sparse PCA via Weighted Elastic Net | 88 |
| <i>Ling Wang and Hong Cheng</i> | |

An Improved Self-organization Antibody Network for Pattern Recognition and Its Performance Study 96

| Learning with Multiple Orientations and Scales for Face Recognition . . . | 332 |
| <i>Chuan-Xian Ren, Dao-Qing Dai, and Zhao-Rong Lai</i> | |
| Discriminative Locality Preserving Canonical Correlation Analysis | 341 |
| <i>Xiang Zhang, Naiyang Guan, Zhigang Luo, and Long Lan</i> | |

Section IV: Medical Imaging

| | |
|--|-----|
| A Hybrid Point-Sets Clustering Approach to Identification of Resting State Functional Network | 350 |
| <i>Can Feng, Tianming Liu, Liang Xiao, and Zhihui Wei</i> | |
| A Novel Cell Segmentation, Tracking and Dynamic Analysis Method in Time-Lapse Microscopy Based on Cell Local Graph Structure and Motion Features | 359 |
| <i>Chen Zhu, Qiu Guan, and Shengyong Chen</i> | |
| Cancerous Lesion Detection from Nevoscope Skin Surface Images via Parametric Color Clustering | 367 |
| <i>Nikhil J. Dhinagar, Ivan Glasgo, Mehmet Celenk, and Mehmet A. Akinlar</i> | |
| A Medical Image Clear Vision Technique for Soft Copy Reading | 376 |
| <i>Huiqin Jiang, Wenxing Li, Zhongyong Wang, Yumin Liu, and Ling Ma</i> | |
| Brain MR Image Segmentation and Bias Field Correction through Class-K HMRF Model and EM Algorithm | 385 |
| <i>Zexuan Ji and Quansen Sun</i> | |
| Blood Bifurcation Structure and Global to Local Strategy Based Retinal Image Registration | 394 |
| <i>Ben Shen, Dongbo Zhang, and Yinghui Peng</i> | |

| | |
|--|-----|
| Accurate Non-rigid Object Segmentation in Medical Images by Fusing Statistical Features with Structural Features | 404 |
| <i>Suhuai Luo, Jiaming Li, and Sarath Seneviratne</i> | |
| Mil-Cand: An Improved Framework for Computer Aided Nodule Detection Based on Multiple Instance Learning | 413 |
| <i>Su-Yang An, Jun Feng, Zhan Li, Yan-Yan Han, Qiu-Ping Wang, and Xiao-Wei He</i> | |
| A Retinal Mechanism Based Color Constancy Model | 422 |
| <i>Shaobing Gao and Yongjie Li</i> | |

Section V: Image and Video Analysis

| | |
|---|-----|
| Color Constancy under Mixed Illuminants Using Image Segmentation and Fuzzy C-Means | 430 |
| <i>Xiangkun Zhao and Jian Yu</i> | |
| Blind Detection of Copy-Move Forgery Based on Multi-Scale Autoconvolution Invariants | 438 |
