Acknowledgments

This study would not have been possible without the support, feedback and encouragement from a large number of people and institutions, who I would like to thank.

First of all, I would like to thank my direct supervisor Dr. Silvia Ulli-Beer for introducing me to research based on Systems Thinking in general and System Dynamics in particular. I am greatly indebted to her for accepting me as a Ph.D. student and scientific collaborator, for her exceptionally skillful balancing of the provision of guidance and the encouragement of own creativity. I am both, grateful and proud to have Prof. Dr. Ruth Kaufmann-Hayoz, Prof. Dr. Franz Schultheis and Prof. Dr. Markus Schwaninger as members of my dissertation committee. They supported me in every way conceivable. In addition to the members of my committee, I would like to thank Dr. Justus Gallati, Dr. Martin Jakob, Franziska Keller, Dr. Arthur Mohr, Christine Scheidegger, Luis Panichelli, Lukas Schmid and Anna Schmuki for commenting on various drafts or the model. I would like to thank my parents for proofreading and translating the summary into Portuguese. I would like to thank Thomas Kellmann for advising me on the graphic design of the study.

At the Interdisciplinary Centre for General Ecology (IKAÖ) at University of Bern, I had the pleasure to collaborate scientifically with the following past and current members associated with the innovation research group: Dr. Susanne Bruppacher, Stephanie Geishüssler, Dr. Stefan Grösser, Heidi Hoffmann, Lisa Lauper, Dr. Stephanie Moser, Samuel Nüesch, Fred de Simoni and Armand Tschanz. In addition, I would like to thank all my former and current colleagues at the institute for their contribution to the institute's unique collaborative, fun-to-be atmosphere. The skills gained by collaborating with the institute's senior scientists as a graduate teaching assistant and their constant stream of encouragement significantly contributed to this study: I would like to thank Fürsprecher Rico Defila, Dr. Antonietta di Giulio and Prof. Dr. Thomas Hammer for all the generous support and interesting discussions. Further, I would like to thank the institute's librarian Katrin Wegmüller-Wyder. At the research group "Dynamics of Innovative Systems" at Paul Scherrer Institute, I had the pleasure to collaborate scientifically with Benjamin Boksberger, Manuel Boza, Dr. Mathias Bosshardt, Dr. Stephan Lienin, Dr. Silvia Ulli-Beer and Stephan Walther and I benefitted

gratefully from Prof. Dr. Alexander Wokaun's generous support for that research group.

In the context of the CCEM-CH Advanced Retrofit research network I received valuable support from Dr. Heinrich Gugerli, Robert Fischer, Dr. Martin Jakob, Yvonne Kaiser Sägesser, René Kobler, Dr. Peter Schwer, Mark Zimmermann and the members of the extended research network in general. This study would not have been possible without the generosity of several practitioners who shared their insight with me during interviews and I want to thank them very much.

Further, I would like to thank participants at numerous forums for valuable advice and encouragement. This includes colleagues attending and the instructors teaching at the Ph.D. seminars at University of St. Gallen, particularly Prof. Dr. Belz, Prof. Dr. Dyllick, Prof. Dr. Wüstenhagen and Dr. Minsch. It includes the members of the very active Swiss Chapter of the System Dynamics Society, particularly Peter Addor, Thomas Beck, Dr. Cecile Emery, Dr. Justus Gallati, Dr. Birgit Kopainski, Luis Panichelli and Dr. Lukas Schmid. It includes the organizers and participants of several conferences of the System Dynamics Society, the 2nd International Sustainability Conference in Basel, as well as teachers and students at spring and summer schools (Freiburg spring school 2008 on empirical research methods, NCCR climate summer school 2010). I further would like to thank the organizers and the participants of colloquia at the Interdisciplinary Centre for General Ecology (IKAÖ, Bern), at the Institute for Sociology (Bern) and at Ecotopia Science Institute (Nagoya, Japan).

I would like to thank the following institutions for their support of this study: The Interdisciplinary Centre for General Ecology at the University of Bern and Paul Scherrer Institut supported this study in numerous ways by serving as the home institutions to the study. The federal office for energy (BFE), Novatlantis, the construction department of the city of Zürich (Hochbaudepartement der Stadt Zürich), the Swiss National Science Foundation (Schweizerischer Nationalfonds zur Förderung der wissenschaftlichen Forschung, SNF) in the context of NFP 54 and the Competence Center Energy and Mobility (CCEM-CH) generously supported this study with research grants.

Last but not least, I would like to thank Martin Berger, Dr. Marie-Eve Cousin, Terçio Dias, Salome Frei, Dr. Nathalie Giger, Thomas Kellmann, Franziska Keller, Andrea Mordasini, Tobias Roth, Christof Rothenberger, Claudia Saurenmann, Christine Scheidegger, Roman Strub, Dr. Dimitri Vanhecke, Simon Walther, Peter Würsch and one lost love for good times, pleasant distractions and valuable discussions. I would like to thank my parents Dr. Rudolf Müller-Clementino and Idalina Müller-Clementino, Richard Müller, Heinrich Müller-Hausamman, Rosa Zulmira Clementino-Dias and all of my widely dispersed family for all their support, without which neither my studies in general nor this thesis in particular would have been possible.

Contents

Part I Introduction: Questions and Approach of the Study

1	Introduction	3
1.1	Motivation and General Research Question	3
1.2	Relevant Streams of Research	5
1.2.1	Main Contributors to the Research Field	5
1.2.2	Major Contributions	7
1.2.3	Conclusion: The Research Gap	12
1.3	Research Questions, Scope of the Study and Excluded Aspects	12
1.4	Conceptualization, Structure and Conventions	16
1.4.1	Conceptualization	16
1.4.2	Structure	17
1.4.3	Conventions	18
1.5	Theories and Definitions	19
1.6	Background of the Study	21
	References	22
2	Research Design and Methods	27
2.1	Introduction	27
2.2	Research Design	27
2.2.1	Systems Thinking and Theory Building	27
2.2.2	Related Methodologies	30
2.2.3	Description of the Research Process	31
2.3	Methods	34
2.3.1	Literature Review	34
2.3.2	Selection of Interviewees	35
2.3.3	Expert Interviews	38
2.3.4	Transcription and Analysis of Interviews	40
2.3.5	Causal Loop Diagrams	41
2.3.6	Quantitative Modeling with System Dynamics	42
2.3.7	Model Testing and Validation	44

2.4	Discussion and Conclusions	45
	References	47

Part II Analytical Perspectives: Toward a Systemic Model of the Societal Problem Situation

3	Climate Change, Energy Use Patterns and the Stock of Buildings: Outline of a Societal Problem Situation	51
3.1	Introduction.	51
3.2	Theoretical Foundation: Defining Societal Problem Situations	52
3.3	Climate Change	54
	3.3.1 Scientific Perspectives on Climate Change	54
	3.3.2 Climate Change as a Field of Contest.	57
	3.3.3 Public Policies in Response to Climate Change.	59
3.4	Energy Use	61
	3.4.1 Patterns in Energy Supply, Demand and Use.	61
	3.4.2 Energy Policy as a Field of Contest.	64
	3.4.3 Public Policies in Response to Problematic Energy-Use Patterns	66
3.5	The Stock of Buildings.	68
	3.5.1 Physical Aspects of Switzerland's Stock of Buildings	68
	3.5.2 Energy Use in Buildings	69
	3.5.3 Emissions from Buildings	70
	3.5.4 Housing and the Rental Market	70
3.6	Elements of the Diffusion of Energy-Efficient Renovations.	72
	3.6.1 Theoretical Foundation: Explaining the Diffusion of Innovations	72
	3.6.2 Construction	74
	3.6.3 Renovation Practices	75
	3.6.4 Energy-Efficient Building Designs	77
	3.6.5 Technological and Economical Progress in Energy-Efficient Building Designs	80
	3.6.6 Economics of Energy-Efficient Building Designs.	82
	3.6.7 Drivers of and Barriers to the Diffusion of Energy Efficient Renovations	85
3.7	The Institutional Context, Policies and Instruments	88
	3.7.1 The Institutional Context.	88
	3.7.2 Theoretical Foundation: Typology of Tools for Sustainable Development	89
	3.7.3 Command and Control Instruments	91
	3.7.4 Economic Instruments	94

- 3.7.5 Service and Infrastructure Instruments 95
- 3.7.6 Collaborative Agreements 98
- 3.7.7 Communication and Diffusion Instruments 99
- 3.7.8 Impacts and Implications 100
- 3.8 Conclusions. 100

Part III Results: A Synthetic Model for Policy Analysis

- 7 A Rich Model of the Diffusion Dynamics of Energy-Efficient
Renovations 207**
 - 7.1 Introduction. 207
 - 7.2 Setup 208
 - 7.3 Overview of Model Modules, Sectors and Boundaries 209
 - 7.4 The Stock of Buildings (Module 1) 210
 - 7.5 Supply and Demand on the Housing Market (Module 2) 212
 - 7.5.1 Setup of the Module. 212
 - 7.5.2 Building Owners’ Decision Making and the Supply of
Housings. 213
 - 7.5.3 Tenants’ Decision Making and the Demand
for Housings 217
 - 7.5.4 Rental Prices and Costs of Renting 221
 - 7.6 Technology (Module 3) 226
 - 7.6.1 Technological Quality of the Two Renovation
Strategies 227
 - 7.6.2 Construction Costs of the Renovation Strategies 229
 - 7.6.3 Architects’ Reactions to Technological Change 231
 - 7.7 Civil Society and State Interventions (Module 4). 233
 - 7.7.1 Civil Society 233

- 7.7.2 Reactions of the State. 238
- 7.8 Selected Insights from Model Analysis. 242
 - 7.8.1 Effect of Energy Price 243
 - 7.8.2 Start-Up Difficulties of Technology 244
 - 7.8.3 Importance of Exogenous Drivers 245
- 7.9 Model Testing Procedures. 246
- 7.10 Conclusions. 250
- References 250
- 8 Transformation of the Societal Problem Situation 253**
