Computational Fluid Dynamics 2002
Proceedings of the Second International Conference on Computational Fluid Dynamics, ICCFD, Sydney, Australia, 15-19 July 2002
We are pleased to present the Proceedings of the Second International Conference on Computational Fluid Dynamics held at the University of Sydney, Australia, from July 15 to 19, 2002. The conference was a productive meeting of scientists, mathematicians and engineers involved in the computation of fluid flow. Keynote lectures were presented in the areas of optimisation, algorithms, turbulence and bio-fluid mechanics.

Two hundred and fifty abstracts from many countries were received for consideration. The executive committee, consisting of A. Lerat, M. Napolitano, J.J. Chattot, N. Satofuka and myself, were responsible for the selection of papers. Each of the members had a separate subcommittee to carry out the evaluation. One hundred and seventy papers were selected of which one hundred and fifty two were presented at the conference. All papers that appear in the proceedings have been peer reviewed by a panel of experts (with a minimum of two for every paper) before publication.

The conference was attended by 160 delegates with a minimum of late withdrawals. The informal and friendly atmosphere provided by the university surroundings was highly appreciated, and the technical aspects of the conference were stimulating.

It is appropriate here to thank Alain Lerat, the retiring secretary of the international scientific committee of the conference. We also wish to welcome J. J. Chattot who is the incoming secretary.

I would also like to thank the members of the local organising committee who processed the abstracts and the manuscripts, the referees for their invaluable comments, the sponsors for their generous support and the many students and spouses for their help.

Sydney, Australia
September 2002

K. Srinivas
chairman
Sponsors

NASA, Ames, USA
Dassault Aviation, Paris, France
Defence Science & Technology Organisation, Australia
Aerospace, Mechanical & Mechatronic Engineering, University of Sydney, Australia
The Institution of Engineers, Australia.

Local Organising Committee

K Srinivas, University of Sydney, Chairman, Editor
S W Armfield, University of Sydney, Co-Chairman, Editor-in-Chief
P Morgan, University of Sydney, Secretary, Editor
M Behnia, University of New South Wales

# Contents

## Part I  Invited Lectures

A Newton-Krylov Algorithm for Aerodynamic Analysis and Design  
*D.W. Zingg, M. Nemec, T.T. Chisholm*  
3

Studying Bypass Transition to Turbulence by Computer Simulation  
*P. A. Durbin, G. Kalitzen*  
19

A Parallel Non-Staggered Navier-Stokes Solver Implemented on a Workstation Cluster  
*S. Armfield, S. Norris, P. Morgan, R. Street*  
30

Towards Computational Biomechanics Based Cardiovascular Medical Practice  
*Takami Yamaguchi, Tomoaki Hayasaka, Daisuke Mori, Hiroyuki Hayashi, Kouichiro Yano, Fumio Mizuno, Makoto Harazawa*  
46

## Part II  Algorithms

Uncertainty Quantification in CFD Simulations: A Stochastic Spectral Approach  
*Lionel Mathelin, M. Yousuff Hussaini*  
65

A Computational Method for Combustion Using Conditional Moment Closure  
*M.J. Cleary, J.H. Kent and R.W. Bilger*  
71

Building-Cube Method for Flow Problems with Broadband Characteristic Length  
*Kazuhiro Nakahashi*  
77

A Discrete Sensitivity Solver for an Industrial CFD Code via Automatic Differentiation  
*David W. F. Standingford, Shaun A. Forth*  
82
Conservative Multidimensional Upwind Residual Distribution Schemes for Arbitrary Finite Elements
Tiago Quintino, Mario Ricchiuto, Arpi Csík, Herman Deconinck and Stefaan Poedts

An Embedded Grid Adaptation Strategy for Unstructured Data Based Finite Volume Computations
Nikhil Shende, Umesh Garg, D. Karthikeyan, N. Balakrishnan

Computation of 3D Steady Navier-Stokes Flow with Free-Surface Gravity Waves
Mervyn R. Lewis, Barry Koren, Hoyte C. Raven

Profile-modifiable Conservative Transport Schemes and a Simple Multi-integrated Moment Formulation for Hydrodynamics
Feng Xiao

Preconditioned Implicit Flux-splitting Scheme for Condensate Flows
Satoru Yamamoto, Byeong Rog Shin

Numerical Model for Flows Including a Solid Body by Level Set Method
Kensuke Yokoi

Designing Adaptive Low Dissipative High Order Schemes
H.C. Yee, B. Sjögreen

A New Grid-free Method for Conservation Laws
Praveen Chandrashekar, S M Deshpande

CFD Newton Solvers with EliAD: An Elimination Automatic Differentiation Tool
Shaun A. Forth, Mohamed Tadjouddine

Parallelized, Solution Adaptive, Multi-Grid Hybrid Unstructured Methods for the Navier-Stokes Equations on Complex Configurations
S. J. Zhang, J. Liu, Y. S. Chen, D. Godavarty, P. Mallapragada

Uncertainty of Solution in Euler Equations and Numerical Instability
Kyu Hong Kim, Chongam Kim, Oh-Hyun Rho, Kyung-Tae Lee

Discontinuous Galerkin Method for the Time-domain Maxwell’s Equations
Adour V. Kabakian, Vijaya Shankar, William F. Hall

Numerical Investigations of Near-Wall Turbulence Structures
Zinedine Khatir ................................................................. 329

Part VII  Fluid Structure Coupling and Heat Transfer

Optimization of a Thermal Coupled Flow Problem
Günter Bärwolff ................................................................. 337

Stabilization of a Linearized Navier-Stokes Solver for Turbomachinery Aeroelasticity
M. Sergio Campobasso, Michael B. Giles ..................................................... 343

Diffusive Mass Transfer and Its Effect upon Boundary-Layer Flows
Iordan A. Halatchev, James P. Denier ..................................................... 349

Numerical Estimations of Transonic Flutter Calculation with the Fluid/Structure Coupling Method
Hiroshi Terashima, Kozo Fujii ..................................................... 355
Flares of Heat in the Near Wake of a Circular Cylinder in Cross Flow Using a Compact Finite-Difference Scheme
Salem Bouhairie, Vincent H. Chu .................................................. 361

Numerical Analysis of the Airfoil's Fluid-Structure Interaction Problems at Large Mean Incidence Angle
Yan Jin, Xin Yuan, Byeong Rog Shin ................................................. 367

Part VIII  Incompressible Flows

Application of Two Dimensional Boundary Element Methods to Ship Motion Predictions
D.S. Holloway, M.R. Davis ........................................................ 375

The Characteristic-Based-Split Method for 3D Incompressible Flows on Unstructured Grids
P. Nithiarasu, J. S. Mathur ......................................................... 381

Milton Woods, Max Bull ............................................................ 387

A Robust and Accurate Scheme for Solving Low Speed Flows
Meng-Sing Liou ................................................................. 393

Part IX  Kinetic Schemes

Implicit Kinetic Schemes for the Euler and the Ideal Magnetohydrodynamics Equations
Ramesh K. Agarwal, H.S.R. Reksoprodjo .................................. 401

3-D KFMG Euler Computations for Unsteady Flows Around Oscillating Geometries
R. Krishnamurthy, B.S. Sarma, S.M. Deshpande .......................... 407

3D Euler Codes Based on Kinetic Upwind Scheme and Their Verification and Validation Using NAL Wind Tunnel Data
PS Kulkarni ................................................................. 413

Part X  Large Eddy Simulation

A General Approximate Wall Condition for Large Eddy Simulations
P. S. Weng, W. Lo, C. A. Lin ................................................. 421
Large Eddy Simulation of the Purging of Density-Stabilized Basins
Michael Kirkpatrick, Steven Armfield ........................................... 427

A Large-Eddy Simulation of Two Side-by-Side Circular Cylinders in Cross Flow
Li Chen, Jiyuan Tu ........................................................................ 433

LES of Turbulent Boundary Layers
Wageeh A. El-Askary, Matthias Meinke, Wolfgang Schröder .................. 439

Part XI Mesh

An Adaptively-Moving-Grid Finite-Volume Scheme with Boundary-Grid Elimination/Addition
Kenichi Matsuno ............................................................................ 447

An Adaptive Cartesian Mesh Flow Solver Based on the Tree-data with Anisotropic Mesh Refinement
Takanobu Ogawa ............................................................................ 453

A Posteriori Error Determination and Grid Adaptation for AMR and ALE Computational Fluid Dynamics
Giovanni Lapenta ............................................................................ 459

A Posteriori Error Estimates and Adaptive Meshing Applied to Flow in Channels with Corners
Pavel Burda, Jaroslav Novotný, Bedřich Sousedík ............................... 465

Part XII Mixed Topics

Fingering Instabilities in a Miscible Rotating Hele-Shaw Flow
Ching-Yao Chen, Shu-Wei Wang, Yu-Chia Liu .................................. 473

A Composite Explicit-Implicit Godunov Method for Unsteady Problems on Highly Stiff Grids
Igor Men’shov, Yoshiaki Nakamura .................................................. 479

Numerical and Experimental Investigation of the Stability of the 3D Flow Between Two Counter-rotating Disks
Olivier Daube, Patrick Le Quéré, Frédéric Moisy, Marc Rabaud .............. 485

Molecular Dynamics Simulation of Oxygen Recombination on Finite Catalytic Surface
Tomoe Oda, Yoshiaki Tamura, Tetuya Kawamura ............................... 491

Finite Spectral Essentially Non-Oscillatory Scheme
Hong-Wei Liu, Yun-Feng Liu, Jian-Ping Wang ................................. 496
Numerical Studies on the Reaction Zones in a Detonation Wave with a Detailed Chemical Reaction Model
Xiang Yu Hu, Boo Cheong Khoo, De Liang Zhang, Zong Lin Jiang ........ 502

Direct Simulation of Aeolian Tone by the Finite Difference Lattice Boltzmann Method
Michihisa Tsutahara, Makoto Kurita, Takeshi Kataoka .................. 508

Development and Applications of a Coupled CFD/CSD Methodology Using an Embedded CSD Approach
Joseph D. Baum, Eric L. Mestreau, Hong Luo, Rainald Löhner, Daniele Pelessone, Charles Charman ................................. 514

Part XIII  Multi-phase Flow

Fix for Solution Errors near Interfaces in Two-Fluid Flow Computations
B. Koren, E.H. van Brummelen, P.W. Hemker, B. van Leer, M.R. Lewis . 523

Numerical Analysis of Particle Behavior Penetrating into Liquid by Level Set Method
Tsuyoshi Oda, Nobuyuki Satofuka, Hidetoshi Nishida ..................... 529

A New Algorithm for Cavitating Flow Simulations Based on the Bubble Dynamics
Yoshiaki Tamura, Yoichiro Matsumoto ................................. 535

Free-Lagrange Simulations of Shock/Bubble Interaction in Shock Wave Lithotripsy
Ahmad R. Jamaluddin, Graham J. Ball, Timothy G. Leighton ............ 541

Effects of Differencing Schemes on Simulation of Dense Gas-Particle Two-Phase Flows
S. J. Zhang, P. Zulli, Y. Q. Feng, X. F. Dong, A. B. Yu ................. 547

Numerical Modelling of Multiple Three Dimensional Gas Bubbles Rising in a Quiescent Liquid Using a Volume of Fluid Method
Matt Gaston, John Reizes, Geoff Evans .................................. 553

Numerical Investigation of Flow Instability in a Low-Pressure Subcooled Boiling Channel
Y.Z. Li, G. H. Yeoh, J. Y. Tu ........................................... 559

Numerical Simulation of Particle Generation in Gas Phase Reactors
Rainer Kaiser, Dieter Hänel, Einar Kruis, Roland Vilsmeier ............ 565
Comparison Between Experimental and Numerical Results of a Mould Filling with Viscous Fluid
Jérôme Breil, Jean Paul Caltagirone, Eric Giraud, Hideaki Aiso, Tadayasu Takahashi ........................................................ 571

On the Computation of Multi-Material Flows Using ALE Formulation
Hong Luo, Joseph D. Baum, Rainald Löhner ................................. 577

Part XIV  Optimisation

Turbomachinery Airfoil Design Optimization Using Differential Evolution
Nateri K. Madavan ................................................................. 585

Design Optimization of Fluid Dynamic Problems Using Cartesian Grids
Andrea Dadone, Bernard Grossman ........................................... 591

Multi-Criteria Aerodynamic Shape Design Problems in CFD Using a Modern Evolutionary Algorithm on Distributed Computers
E. Whitney, L. Gonzalez, K. Srinivas, J. Péraux ................................ 597

Comparison of Simultaneous Perturbation Stochastic Approximation and Simulated Annealing in Transonic Airfoil Design Optimization
X.Q.Xing and M.Damodaran ................................................... 603

Part XV  Supersonic Flows and Shock Waves

Numerical Simulation of Fluctuations in a Shock Tunnel Flow
Richard J. Goozée, David R. Buttsworth, Peter A. Jacobs .................. 611

Numerical Simulations of Sonic Booms in Non-uniform Flows
Mohamed Hafez, Essam Wahba ................................................ 617

Computing Jet Screech: A Complex Aeroacoustic Feedback System
Ching Y. Loh, Lennart S. Hultgren ........................................... 623

Direct Simulation of Transitional Shock Boundary-Layer Interactions at Mach 2
Yufeng Yao, Neil Sandham ..................................................... 629
Numerical Simulation of Shock-Interface Interaction With Modified Compact Scheme
Fu Dexun, Ma Yanwen ............................................. 635

Direct Molecular Simulation (Monte-Carlo Method) of Weak Mach Shock Reflection
D.J. Auld ........................................................ 641

Part XVI Turbomachinery Flow

Numerical Study of the Flow Around the High-torque Wind Turbine of Vertical Axis Type
Tetuya Kawamura, Yuko Sato ....................................... 649

Numerical Simulation of Steady and Unsteady Turbomachinery Flows Using a Navier-Stokes Solver
J. J. Liu ................................................................. 655

Numerical Simulation of Windturbine for Interference Between Rotors and Tower
Makoto Iida, Chuichi Arakawa ........................................ 661

Unsteady Flow Simulation of Turbine Stage
Francesco Martelli, Elisabetta Belardini, Paolo Adami ............. 667

A Three-Dimensional Parallel Time-Accurate Turbopump Simulation Procedure Using Overset Grid Systems
C. Kiris, W. Chan, D. Kwak ........................................ 673

Part XVII Turbulence

Cycle-resolved Computations of Compressible Vortical Flow in Cylinders of Engines
Ken Naitoh, Masashi Ono, Kunio Kuwahara, Egon Krause .......... 681

Turbulent Pipe Flow of Non-Newtonian Fluids
M. Rudman, H. M. Blackburn ........................................ 687

Some Aspects of Shocklets in Isotropic Compressible Turbulence
Fenggan Zhuang, Xinliang Li ........................................ 693
Part XVIII  Unsteady Flow

Numerical Simulation of Unsteady Viscous Flow Around a Flapping Wing
Koji Isogai .......................... 701

Validation of Unsteady Turbulent Flow Predictions for Over-expanded Rocket Nozzles
Richard Schwane, Lars Torngren, Henry Wong .......................... 707

Gust Acoustics Computation with a Space-Time CE/SE Parallel 3D Solver
X.Y. Wang¹, A. Himansu², S.C. Chang³ and P.C.E. Jorgenson⁴ ........ 713

Unsteady Flow and Noise Characteristics of Wing in Ground Effect at Close Proximity
Young J. Moon, Sung-Ryong Koh, Jung-Hee Seo, Yong-Hyun Yoon, Jin-Soo Cho .......................... 719

An Accurate and Efficient Technique for Unsteady Viscous Flows in Two Dimensions
G. Pascazio, A. Grimaldi, M. Napolitano .......................... 725

A Second-order-accurate Monotone Implicit Fluctuation Splitting Scheme for Unsteady Problems
P. De Palma, G. Pascazio, G. Rossiello, M. Napolitano ........ 731

Part XIX  Vortical Flows

Direct Navier–Stokes Simulation of Acoustic Waves Radiated by Vortex–Body Interaction
Nozomu Hatakeyama, Osamu Inoue, Tomohiro Irie .......................... 739

Simulation of Streamwise Vortices on Turbulent Hypersonic Ramps
Heinrich Lüdeke, Erich Schülein .......................... 745

Numerical Simulation of the Interaction of Two Adjacent Synthetic Jet Actuators
Dahai Guo, Andrew W. Cary, Ramesh K. Agarwal .......................... 751

Numerical Investigation of Spiral and Wavy Vortices in Spherical Gaps
Li Yuan .......................... 757
Part XX  Technical Notes

A Numerical Model of the Dry Spinning Process
Joyce M Aitchison ................................................ 765

Transient Sulfur Dioxide Uptake by an Aerosol Droplet in a Convective Flow
Wei-Hsin Chen ................................................... 767

Parallelism for Simulations of an Entire Shock Tunnel Facility
Richard J. Goozée, Peter A. Jacobs ............................... 769

Numerical Analysis of Transpiration Cooling in Carbon Dioxide Atmosphere at Hypersonic Mach Numbers

Numerical Analysis of Unsteady Effects in Two-Phase Nozzles
U. Maatje, E. von Lavante ........................................ 773

Numerical Simulation of Three-Dimensional Flow around a Rectangular Cylinder
Zhiliang Ou, Liang Cheng ........................................... 775

Investigation of Flow Conditioning in Pipes
G. Moniz Pereira, B. Mickan, E. von Lavante, R. Kramer .......... 777

A Combined SPH-experimental Systematic Approach to Resonant Free Surface Movements
Antonio Souto, Rosario Bravo ..................................... 779

Development of a Simple 2-D Steady State Model of the Flow from a Precessing Jet Nozzle
Elizabeth Smith, Bassam Dally, Graham Nathan .................. 781
