Softcover reprint of the hardcover 1st edition 1968

The use of general descriptive names, trade names, trade marks, etc. in this publication, even if the former are not especially identified, is not to be taken as a sign that such names, as understood by the Trade Marks and Merchandise Marks Act, may accordingly be used freely by anyone.

Title No. 5702.

Contents

Professor Helen Wendler Deane Markham, 1917—1966 By ROY O. GREEP	1
Chapter 9: Control of Aldosterone Secretion. By WILLIAM F. GANONG and EDMUND E. VAN BRUNT. With 18 Figures	4
Introduction	4
Methods Used to Measure the Rate of Aldosterone Secretion	6
A. Adrenocortical Histology	6
B. Sodium and Potassium Excretion	8
C. Direct Measurement of Aldosterone in Body Fluids	8
I. Bioassay	8
II. Chemical Identification	9
III. Isotope Derivative and Dilution Methods	9
IV. Special Problems in the Measurement of Aldosterone in Urine	10
V. Special Problems in the Measurement of Aldosterone in Adrenal-Venous Blood	10
VI. Measurement of Aldosterone in Peripheral Blood	11
D. Determination of Secretion Rate by Dilution of Isotopic Aldosterone	12
Effects of Changes in Plasma Electrolyte Levels on Aldosterone Secretion	12
ACTH and the Control of Aldosterone Secretion	13
A. Effect of Hypophysectomy on Adrenal Histology	13
B. Effect of Hypophysectomy on Aldosterone Secretion	14
C. Effect of ACTH on Aldosterone Secretion	15
D. Possible Indirect Effects of ACTH on Aldosterone Secretion	17
E. Control of ACTH Secretion	17
The Renin-Angiotensin System and the Control of Aldosterone Secretion	18
A. The Effect of Renin and Angiotensin II on Aldosterone Secretion	19
I. Mechanism of Action of Angiotensin II on the Adrenal Cortex	21
II. Effects of Endogenous Renin	22
B. Other Effects of Angiotensin II	23
I. Variations in Pressor Response	24
II. Effects on the Kidney	26
C. Metabolism of Angiotensin II	26
D. Renin	27
E. Comparative Physiology of the Renin-Angiotensin System	28
F. The Juxtaglomerular Apparatus as the Source of Renin	31
G. Stimulation of Renin Secretion	35
I. Methods for Measuring Renin and Angiotensin II in Body Fluids	35
II. Other Indices of Renin Secretion	35
III. Stimuli Affecting Renin Secretion and Their Mode of Action	36
1. Role of the Pressure Gradient Across the JG Cells	36
2. Chronic Renal Hypertension	45
3. Effects of Changes in Pulse Pressure	46
4. Effect of Renal Arteriolar Constriction	46
5. Effects of Other Stimuli	48
6. Other Theories of the Control of Renin Secretion	48
Interactions Between ACTH and Angiotensin II	49
A. ACTH Deficiency	49
I. Acute	49
II. Chronic	50

B. ACTH Excess and Compensatory Hypertrophy	51
C. Angiotensin II Deficiency	51
D. Angiotensin II Excess	52
I. Acute	52
II. Chronic	52
E. ACTH and Renin Secretion	53
Possible Neural Regulatory Mechanisms	54
A. Role of the Anteroventral Hypothalamus	54
B. Role of the Posterior Diencephalon and Neighboring Structures	55
Effect of Growth Hormone on Aldosterone Secretion	61
Effects of Other Hormones on Aldosterone Secretion	61
Stimuli Affecting Aldosterone Secretion and Probable Pathways through which they Exert their Effects	62
A. Basal Secretion and Diurnal Rhythm	64
B. Stimuli that Increase both Aldosterone and Glucocorticoid Secretion	65
C. Stimuli that Increase Aldosterone Secretion Selectively	68
I. Relation to Plasma Sodium and Potassium Levels	69
II. The Role of the Renin-Angiotensin System	71
1. Cardiovascular Manipulations	71
2. Low-salt Diet and Sodium Depletion	73
3. Secondary Hyperaldosteronism	73
4. Other Stimuli	74
D. Stimuli that Decrease Aldosterone Secretion	74
E. Negative Feedback Control of Aldosterone Secretion	76
Effects of Variations in Aldosterone Metabolism on Aldosterone Secretion	77
Relation between Aldosterone Secretion and the Autonomic Nervous System	78
Other Mechanisms Regulating Sodium and Potassium Excretion	78
A. "Escape" Mechanism	79
B. Diuretic Response to Expansion of Extracellular Fluid Volume	81
Conclusions	81
Appendix: Chemical Names for Substances Mentioned in Text	83
Literature	84

Chapter 10: Manifestations of Hypersecretion of Adrenal Sex Steroids in Man.

By PATRICIA ZEIS THOMAS. With 18 Figures	117
Introduction	117
The Human Fetus	118
A. Embryology	118
I. Genetic Sex	118
II. Adrenal Cortex	119
1. The Fetal Adrenal Gland and Its Relationship to Congenital Adrenal Hyperplasia	119
2. Steroid Biosynthesis in the Fetal Adrenal Gland	120
III. The Gonads	122
1. The Undifferentiated Stage	122
2. The Testis	123
3. The Ovary	124
IV. The External Genitalia	124
1. Indifferent Stage	124
2. Male	124
3. Female	124
V. Summary of Embryology	125
Pseudohermaphroditism	125
A. Pseudohermaphroditism not of Adrenal Origin	125
I. Maternal Tumor	125
II. Medication During Pregnancy	127

III. Association with Other Congenital Anomalies	129
IV. Isolated Anomaly of Unknown Etiology	129
B. Pseudohermaphroditism Associated with Congenital Adrenal Hyperplasia	130
Congenital Adrenal Hyperplasia	131
A. Introduction	131
I. Heredity	132
II. General Pathogenesis	133
III. Postulated Normal Steroid Biosynthetic Pathways	135
B. Congenital Adrenal Hyperplasia with Virilism	140
I. Clinical Description	140
II. The Postulated Enzymatic Defect	141
III. Production of Adrenal Androgens and Estrogens	146
IV. Steroid Content and Steroid Transformations in Adrenal Glands	148
C. Congenital Adrenal Hyperplasia Complicated by Electrolyte Imbalance	148
I. Common Form	149
1. Clinical Description	149
2. Pathogenesis	150
a) The Postulated Enzymatic Defect	150
b) Possible Salt-Excreting Factor	151
c) Aldosterone Production	151
d) Consideration of the Etiology of Electrolyte Imbalance in Congenital Adrenal Hyperplasia	153
II. Atypical Form of Congenital Adrenal Hyperplasia	155
1. Clinical Description	155
2. Pathogenesis	155
3. Possible Additional Cases	157
D. Congenital Adrenal Hyperplasia Complicated by Hypertension	158
I. Clinical Description	159
II. Pathogenesis	159
E. Congenital Adrenal Hyperplasia Complicated by Fever	160
I. Clinical Description	160
II. Pathogenesis	161
F. Congenital Adrenal Hyperplasia Complicated by Hypoglycemia	162
I. Clinical Description	162
II. Pathogenesis	163
G. Involvement of Other Endocrine Glands	163
I. The Pituitary	163
II. Testes	164
III. Ovaries	165
H. Etiology of Congenital Adrenal Hyperplasia	166
Acquired Syndromes	169
A. Adrenal Hyperplasia	169
I. Associated with Masculinization	170
II. Associated with Feminization	172
III. Associated with Excessive Glucocorticoid and Sex Hormone Production	173
1. Introduction	173
2. Clinical Manifestations of Hypercortisolemia and Excessive Sex Hormone Production in Patients with Cushing's Syndrome	175
3. Excretion of 17-Ketosteroids in Relation to Adrenal Pathology	177
4. Studies of Androgens and Estrogens in Patients with Hypercortisolemia Associated with Adrenal Hyperplasia	177
B. Adrenal Tumors	180
I. So-Called Non-Functioning Adrenal Tumors	181
II. Benign Adrenal Tumors Associated with Abnormal Endocrinological Manifestations	181
1. Adrenal Adenomas Associated with Androgenic Manifestations	181
2. Benign Adrenal Tumors Associated with Estrogenic Manifestations	184
III. Excessive Sex Hormone Secretion in Patients with Hypercortisolemia Associated with Adrenal Adenoma	185
IV. Malignant Adrenal Tumors	186

1. Adrenocortical Carcinoma Associated with Virilization Only or with Additional Manifestations of Cushing's Syndrome	186
2. Malignant Adrenal Tumors Associated with Feminization	188
a) Clinical Description	188
b) Steroid Determinations in Patients with Feminization Associated with Adrenal Tumors	188
3. Excessive Production of Estrogens in Adrenocortical Carcinoma Associated with Cushing's Syndrome	191
C. Clinical Tests of Some Value in Characterizing the Nature of Adrenocortical Pathology	192
I. Acquired Adrenal Hyperplasia	193
II. Benign Adrenal Tumors	195
III. Malignant Adrenal Tumors	195
Testosterone Determinations in Biological Fluids	196
Literature	198

Chapter 11: Control of Corticotrophin Secretion.

By J. R. HODGES, M. T. JONES, and M. A. STOCKHAM	215
The Assessment of Hypothalamo-Pituitary-Adrenocortical Activity	216
Regulation of Pituitary Adrenocorticotrophic Activity	222
A. The Role of the Sympathetic Nervous System	222
B. The Role of the Central Nervous System	224
C. The Role of Corticosteroids	232
D. Locus of Action of Corticosteroids in Feedback Mechanism	238
E. The Role of Circulating Corticotrophin	242
Conclusion	243
Literature	244

Chapter 12: On the Pharmacologic Actions of 21-Carbon Hormonal Steroids ("Glucocorticoids") of the Adrenal Cortex in Mammals.

By A. H. JANOSKI, J. C. SHAVER, N. P. CHRISTY and W. ROSNER	256
General Considerations	256
Mechanism of Action of Glucocorticoids	257
Action of Glucocorticoids on Enzymes and Lysosomes	260
A. Glucocorticoids and Enzyme Activity	260
I. Introduction	260
II. Enzymes Responsive to Glucocorticoids	262
1. Enzymes of Carbohydrate Metabolism	263
a) Glucose-6-phosphatase	263
b) Fructose-1,6-diphosphatase	265
c) Other Enzymes of Carbohydrate Metabolism	266
2. Amino Acid Metabolism	268
a) Tryptophan Pyrrolase	268
b) Other Enzymes of Amino Acid Metabolism	270
3. Miscellaneous Enzymes	272
III. Mechanism of Glucocorticoid Action on Enzyme Systems	274
IV. Significance of Glucocorticoid Actions on Enzyme Systems	276
B. Glucocorticoids and Lysosomes	278
I. Introduction	278
II. Glucocorticoid Effects on Lysosomes	280
1. Protection Against the Effects of Ultraviolet Irradiation	280
2. Protection Against Toxic Effects of Vitamin A	281
3. Protection Against the Effects of Bacterial Toxins	282
III. Mechanism of Glucocorticoid Action on Lysosomes	283
1. Structure-Activity Relationships	283
2. Proposed Mechanisms of Action	284
IV. Significance of Glucocorticoid-Lysosomal Interactions	285
1. Tissue Damage and Repair	286
2. Fever and Disease State	287
V. Summary	288

Action of Glucocorticoids on Cells, Tissues, Organs and Systems	289
A. Nervous System	289
I. Peripheral Nerve	289
II. Brain	289
1. Anatomy	289
2. Physiology	290
3. Metabolism	290
4. Cerebral Edema	291
B. Eye	291
C. Connective Tissue	292
I. Fibroblasts	292
II. Mast Cells	293
D. Skeletal Muscle	293
E. Bone, Cartilage and Calcium Metabolism	294
F. Skin	296
G. Blood	298
I. Hematopoiesis and Red Blood Cells	298
II. Coagulation	299
III. Eosinophils	300
IV. Polymorphonuclear Leukocytes	300
V. Basophils	301
VI. Lymphocytes	301
H. Gastrointestinal Tract	302
I. Stomach	302
1. Clinical Data	302
2. Experimental Data	303
II. Pancreas	304
III. Liver	305
J. Cardiovascular System	305
I. Heart	305
II. Blood Vessels	306
K. Lung	307
Pharmacologic Actions of Glucocorticoids in Man	307
A. Naturally Occurring and Pharmacologically Induced Hypercortisolism	307
B. Effects on Intermediary Metabolism	308
I. Protein Metabolism	308
1. Introduction — Nitrogen Balance, Amino Acids, and Gluconeogenesis	308
2. Plasma Proteins	309
3. Myopathy	310
4. Skin	310
II. Carbohydrate Metabolism	311
1. Carbohydrate Tolerance	311
2. Gluconeogenesis	312
3. Renal Effects and Glucose	313
4. Insulin and Pancreatic Islet Cell Reserve	314
5. Glucose Utilization	315
6. Unique Effects of Glucocorticoids on Carbohydrate Metabolism	315
III. Lipid Metabolism	316
1. General Comments	316
2. Nodular Panniculitis	317
C. Effects on Blood Pressure	318
D. Effects on Organs and Systems	319
I. Central Nervous System	319
1. Introduction	319
2. Generally Observed Organic Effects	319
3. Electroencephalography	320
4. Psychic Effects	320
II. Eye	322
1. Introduction	322
2. Intraocular Pressure—"Corticosteroid Glaucoma"	322
3. Cataract Formation	324

III. Bone	325
1. Osteoporosis	325
a) Histology	326
b) Radiography	326
2. Pathological Fractures	327
3. Joint Degeneration	327
4. Calcium Metabolism	328
IV. Kidney	329
1. Renal Function and Water and Electrolyte Balance	329
a) Glomerular Filtration and Tubular Functions; Mechanisms	329
b) Diurnal Rhythms and Metabolism of Sodium and Potassium	331
c) Summary of Glucocorticoid Effects on Electrolytes	333
2. Hypokalemic Alkalosis	333
V. Endocrine Organs and Functions	334
1. Thyroid	334
2. Ovary	335
a) Amenorrhea	335
b) Pregnancy and the Fetal Adrenal Gland	335
c) Ovarian Pathology	336
3. Pituitary-Adrenal Axis	336
4. Growth	338
a) Linear Growth	338
b) Antagonism of Growth Hormone	338
5. Adrenocortical Steroids and Parathyroid Hormone	338
Literature	339
Author Index	369
Subject Index	424
