
BestMasters

Mit „**BestMasters**“ zeichnet Springer die besten Masterarbeiten aus, die an renommierten Hochschulen in Deutschland, Österreich und der Schweiz entstanden sind. Die mit Höchstnote ausgezeichneten Arbeiten wurden durch Gutachter zur Veröffentlichung empfohlen und behandeln aktuelle Themen aus unterschiedlichen Fachgebieten der Naturwissenschaften, Psychologie, Technik und Wirtschaftswissenschaften. Die Reihe wendet sich an Praktiker und Wissenschaftler gleichermaßen und soll insbesondere auch Nachwuchswissenschaftlern Orientierung geben.

Springer awards “**BestMasters**” to the best master’s theses which have been completed at renowned Universities in Germany, Austria, and Switzerland. The studies received highest marks and were recommended for publication by supervisors. They address current issues from various fields of research in natural sciences, psychology, technology, and economics. The series addresses practitioners as well as scientists and, in particular, offers guidance for early stage researchers.

Allen, die zur freien Entfaltung der vorliegenden Arbeit beigetragen haben, gewidmet

Für Rosi und Hubert, Anna, Teresa und Gerald, Constantin und Leonora

Dank

Ich bedanke mich herzlich bei Assoc.-Prof. Dr. Thomas Loerting. Durch seine Betreuung lernte ich, dass fachliche Kompetenz und eine respektvolle und wertschätzende Haltung einer Betreuungsperson gegenüber Studierenden nicht nur möglich sein können, sondern auch wesentlich zum Gelingen einer wissenschaftlichen Arbeit beitragen.

Ebenso gilt mein Dank den anderen Mitgliedern der „Eisgruppe“, die mich von Anfang an herzlich in ihre Gemeinschaft aufgenommen haben.

Schließlich möchte ich mich auch bei meinen Eltern und Schwestern bedanken. Ohne die Unterstützung meiner Familie wäre ich nicht dort, wo ich heute bin.

Contents

1 Introduction	1
1.1 Water a truly anomalous substance	1
1.2 State diagram of water	2
1.2.1 Crystalline Phases	3
1.2.1.1 Ice I: Hexagonal ice I_h , cubic ice I_c and stacking-disordered ice I_{sd}	4
1.2.1.2 Ices II, V, IX	5
1.2.2 Amorphous states of ice	6
1.2.2.1 Low-density amorphous ice (LDA)	7
1.2.2.2 High-density amorphous ice (HDA)	8
1.2.2.3 Very high-density amorphous ice (VHDA)	9
1.3 Phase transitions	10
1.3.1 Classification	10
1.3.2 Homogeneous nucleation and nuclei growth	12
1.3.3 Discontinuous transition between LDA/HDA	17
1.4 Glass transition	17
1.4.1 Glass transitions in water	19
1.5 Theories aimed at explaining water's anomalies	20
1.6 Experimental challenges - Water's no-man's land	23
1.7 Motivation for the present thesis	24
2 Methods	25
2.1 Dilatometry	25
2.1.1 Dilatometric setup	25
2.1.2 Sample preparation	26
2.2 Sample preparation	27
2.2.1 X-ray diffraction setup	28
3 Experimental section	29
3.1 Preparation of eHDA	29
3.1.1 Isothermal compression of hexagonal ice I_h	29
3.1.2 Preparation of VHDA via isobaric heating of uHDA	30
3.1.3 Preparation of eHDA via isothermal decompression of VHDA	32
3.2 Crystallisation experiments	33
3.2.1 Crystallisation of eHDA (first isobaric heating step)	33
3.2.2 Second isobaric heating step to T_{max} and quench recovery	34
3.3 Definition of crystallisation temperature T_x	35

3.4	Apparatus correction.....	37
3.5	Temperature correction.....	38
3.6	Characterisation of crystallisation products.....	39
3.7	Results of the volumetric crystallisation study of eHDA	40
3.8	Results of XRD study of crystallisation products of eHDA.....	45
3.9	Crystallisation / polymorphic transition studies of bulk LDA / I _h	50
3.9.1	Preparation of bulk LDA and I _h samples	50
3.9.2	Isobaric heating experiments and XRD of bulk LDA and ice I _h	51
4	Discussion.....	57
4.1	Crystallisation of eHDA.....	57
4.2	Comparison of phase transition in the bulk and in nanosized nuclei.....	58
5	Summary.....	61
	References.....	63

List of Figures

Fig. 1: State diagram of water	2
Fig. 2: Depiction of the six possible configurations within a Walrafen-pentamer	3
Fig. 3: Phase diagram of water	6
Fig. 4: Depiction of oxygen-oxygen radial distribution functions	8
Fig. 5: Depiction of the $G(T)$, $S(T)$, $C_p(T)$ for (dis)continuous transitions	11
Fig. 6: Gibbs free energy of cluster formation	15
Fig. 7: $V_{mol}(T)$ for vitrification and crystallisation	18
Fig. 8: Depiction of density and the response functions for water and a simple liquid..	21
Fig. 9: $p(T)$ diagrams of different scenarios	22
Fig. 10: Dilatometry setup	26
Fig. 11: Sketch of an x-ray diffraction experiment.....	27
Fig. 12: Photo of the x-ray powder diffractometer <i>Siemens D5000</i>	28
Fig. 13: State diagram of water.....	29
Fig. 14: $\Delta V(p)$ diagram of the preparation of uHDA	30
Fig. 15: $\Delta V(T)$ diagram of the preparation of VHDA	31
Fig. 16: $\Delta V(p)$ diagram of the preparation of eHDA ^{0.07-0.3}	33
Fig. 17: Phase diagram of water	34
Fig. 18: $\Delta V(T)$ curves of crystallisation and the subsequent second isobaric heating.....	35
Fig. 19: Crystallisation curves $\Delta V(T)$ and $p(T)$ of experiment CT033	36
Fig. 20: Crystallisation curves $\Delta V(T)$ and $p(T)$ of experiment CT017.....	36
Fig. 21: Length expansion $\Delta d(T)$ of the apparatus at four different pressures	37
Fig. 22: Depiction of the linear fit $\Delta T(T)$ for temperature correction	39
Fig. 23: Depiction of a typical diffractogram	40
Fig. 24: $\Delta V(T)$ of crystallisation experiments of eHDA at pressures 0.05–0.30 GPa.....	41
Fig. 25: Pressure deviation $\Delta p(T, p)$ at the (formally) isobaric heating experiments.....	42
Fig. 26: Crystallisation temperature as a function of pressure of eHDA ^{0.07-0.3}	43
Fig. 27: Series of x-ray diffractograms.....	46
Fig. 28: Sketch of transformations at 0.10 GPa and 0.30 GPa	50
Fig. 29: $\Delta V(T)$ and $p(T)$ of the crystallisation of bulk LDA	52
Fig. 30: Series of diffractograms of pressure-dependently crystallised LDA samples	53
Fig. 31: $\Delta V(T)$ of I_h upon isobaric heating at pressures 0.30-0.50 GPa.....	54
Fig. 32: Series of diffractograms measured after isobaric heating of I_h samples	55
Fig. 33: T_{trans} and T_x as a function of pressure for bulk ice I_h and bulk LDA	56

List of Tables

Tab. 1: List of hydrogen order/disorder pairs	4
Tab. 2: Parameters of x-ray measurements.....	28
Tab. 3: Parameters of the dilatometric setup for preparation of uHDA.....	30
Tab. 4: Parameters of the dilatometric setup for the preparation of VHDA.....	31
Tab. 5: Parameters of the temperature protocol for the preparation of VHDA.....	31
Tab. 6: Parameters of the dilatometric setup for the preparation of eHDA.....	32
Tab. 7: Slopes and intercepts for the apparatus correction.	38
Tab. 8: Parameters of linear regression.....	39
Tab. 9: $T_x(p)$ values for eHDA ^{0.1; 0.2; 0.3}	44
Tab. 10: $T_x(p)$ values for eHDA ^{0.07; 0.08; 0.15}	45
Tab. 11: Composition of crystallisation products of eHDA ^{0.1}	47
Tab. 12: Quantitative analysis of crystallisation products of eHDA ^{0.1}	48
Tab. 13: Composition of crystallisation products of eHDA ^{0.2}	48
Tab. 14: Quantitative analysis of crystallisation products of eHDA ^{0.2}	48
Tab. 15: Composition of crystallisation products of eHDA ^{0.3}	49
Tab. 16: Quantitative analysis of crystallisation products of eHDA ^{0.3}	49
Tab. 17: Crystallisation temperatures $T_x(p)$ of (bulk) LDA.....	52
Tab. 18: Transition temperatures $T_{trans}(p)$ of (bulk) I_h	54
Tab. 19: Values for estimating the radius of a spherical LDA/ I_h nucleus	59
Tab. 20: Values for estimating the number of molecules in a LDA/ I_h nucleus	60
