Dear Colleague and Participant in Bioceramics and Alternative Bearings in Joint Arthroplasty: 10th International BIOLOX® Symposium

We are once again very proud that we are able to present to you the proceedings of the Symposium as part of your registration materials. This group accomplishment has been made possible by the superb cooperation received from the speakers in sending us their manuscripts on a timely basis as well as by the supporting staff at both CeramTec and at the Publishing House in executing all of the details needed. We specially extend our most heartfelt thanks to the Scientific Committee for their assistance in evaluating and selecting the submissions as well as developing the Symposium program.

We are more convinced than ever that the proceedings of this Symposium are a continuation of CeramTec’s tradition of providing all members of the orthopedic surgical community with a valuable addition to your reference libraries. We hope that this book will present you with the latest and most up to date source of scientific and clinical information regarding the use of ceramics and other alternative bearings in joint replacement surgery.

The Symposium pays tribute and recognition to the long anticipated awakening of the American Markets to ceramics and alternative bearing technologies as well as to an American City with a strong heritage dedicated to education and to international interaction. We are convinced that the excellence of the presentations, the fruitful discussions, the depth of knowledge of the participants, the quality of the organization and even the City of Washington will all work together to make this a very special event in the pursuit of increased recognition of the benefits of Ceramic Bearing technology by the Orthopedic Surgical community.

James A. D’Antonio
Symposium President

Martin Dietrich
Managing Director
CeramTec Medical Products Division
List of contents

KEYNOTE ADDRESS

Bearing Surfaces - 2005 ................................................................. 3
J. Black

SESSION 1

New Developments in the Basic Science of Ceramics and other Alternative Bearings

1.1 Severe Simulation Test for run-in wear of all-alumina compared to alumina composite THR ............................................. 11
I. C. Clarke, G. Pezzotti, D. D. Green, H. Shirasu and T. Donaldson

1.2 Comparison of the Functional Biological Activity and Osteolytic Potential of Ceramic on Ceramic and Cross Linked Polyethylene Bearings in the Hip .............................................. 21

1.3 Allergic reactions to metal implants: influence of wear debris ................................................................. 25
P. Thomas and B. Summer

1.4 Can Metal-Metal Total Hip Arthroplasty induce Hypersensitivity reactions? .......................................................... 33
C. H. Lohmann

1.5 Blood Analysis for Trace Metals in Patients with Different Bearings in Total Hip Arthroplasty ........................................ 39
K. Knahr, L. Karamat and O. Pinggera

SESSION 3

Alternative Wear Couples

2.1 Metal-on-Metal Total Hip Arthroplasty: The Concerns ................................................................. 47
S. J. MacDonal

2.2 Clinical Performance of a Highly Crosslinked Polyethylene at Four to Five Years in Total Hip Arthroplasty: A Randomized Prospective Trial .................................................... 49
J. M. Martell, J. J. Verner and S. J. Incavo

2.3 Co-Cr Head Roughness and its Effect on Wear of UHMWPE and XLPE Cups .................................................. 51
T. Donaldson, A. Massihi, J. G. Bowsher and I. C. Clarke
2.4 Polyethylene wear in Total Hip Arthroplasty - matched pair analysis of ceramic and metal heads ...............................................................59
C. S. Ranawat, V. J. Rasquinha and J. A. Rodriguez

2.5 Two Ceramic Bearing Surfaces with a Self Adjusting Cup: A New Application of Delta Ceramics to reduce the Risk of Dislocation and Subluxation .................................................................61

2.6 20 Years Experience of Zirconia Total Hip Replacements .................................................................67
I. C. Clarke, D. D. Green, G. Pezzotti and D. Donaldson

2.7 Controlled Zirconia Phase Transformation in BIOLOX® delta - a Feature of Safety .................................................................79
M. Kuntz, N. Schneider and R. Heros

SESSION 3

Clinical Results of Ceramic on Ceramic Systems

3.1 Alternative Bearing Surfaces: Alumina Ceramic Bearings for Total Hip Arthroplasty .................................................................87
W. N. Capello, J. A. D’Antonio, J. R. Feinberg and M. T. Manley

3.2 Ceramic-on-Ceramic Total Hip Arthroplasty: The USA Experience .................................................................95
J. P. Garino

3.3 Ceramic-on-Ceramic versus Ceramic-on-Polyethylene Bearings in Total Hip Arthroplasty: Results of a Multicenter Prospective Randomized Study and Update of Modern Ceramic Total Hip Trials in the USA ........................................101
B. S. Bol, T. J. Aleto, J. P. Garino, A. Toni and K. J. Hendricks

3.4 European Experience with Ceramic Systems .................................................................109
A. Toni and F. Traina

3.5 Australian Experience with Ceramic Systems .................................................................113
W. K. Walter

SESSION 4

The Ceramic Option: Indications, Contraindications, Revision and Surgical Challenges

4.1 Evolution of Total Hip Arthroplasty: Computer-Assisted, Minimally Invasive Techniques Combined with Alumina Ceramic-Ceramic Bearings .................................................................119
S. B. Murphy and M. Tannast
4.2 Acetabular Positioning to Maximize Range of Motion ......................................................... 131
J. A. D'Antonio

4.3 Acetabular Positioning without Navigation – Anterior Approach ........................................ 133
W. J. Hozack

4.4 "Stem first": A simplified method for optimized positioning of components in Total Hip Arthroplasty ................................................................. 137
K.-H. Widmer

4.5 Revision Surgery utilizing Ceramic Bearings ................................................................. 143
J. P. Garino

4.6 Surface Changes to Alumina Femoral Heads after Metal Staining during Implantation, and after Recurrent Dislocations of the Prosthetic Hip ......................................................... 147
B. S. Bal, M. N. Rahaman, T. Aleto, F. S. Miller, F. Traina and A. Toni

SESSION 5

Reliability of Alumina Ceramics: Myths and Reality

5.1 Ceramic Component Fracture: Trends and Recommendations with Modern Components based on Improved Reporting Methods ......................................................... 157
J. P. Garino

5.2 Ceramic Manufacturing Overview ................................................................. 169
M. Dietrich

5.3 State of the Art in Ceramic Manufacturing ................................................................. 175
R. Lenk

SESSION 6

New Applications for Ceramics

6.1 Primary Total Knee Replacement with a Zirconia Ceramic Femoral Component ......................................................... 183
B. S. Bal, D. D. Greenberg and T. J. Aleto

6.2 Alternative Bearing Surfaces ................................................................. 191
M. Manley and K. Sutton

6.3 Wear of a Novel Ceramic on Metal Bearings for Hip Prosthesis ......................................................... 197
J. Fisher, P. Firkins, J. L. Tipper, R. Farrar and E. Ingham
6.4 Future Ceramic Strategies .........................................................201
M. Kuntz

KEYNOTE ADDRESS

The Relationship between Acetabular Osteolytic Lesion Volume and Polyethylene Wear in Cementless Total Hip Arthroplasty .........................209
N. Kitamura, R. H. Hopper, S. B. Leung, C. A. Engh, Jr. and Ch. A. Engh
