Aims and Scope

The series “Springer Theses” brings together a selection of the very best Ph.D. theses from around the world and across the physical sciences. Nominated and endorsed by two recognized specialists, each published volume has been selected for its scientific excellence and the high impact of its contents for the pertinent field of research. For greater accessibility to non-specialists, the published versions include an extended introduction, as well as a foreword by the student’s supervisor explaining the special relevance of the work for the field. As a whole, the series will provide a valuable resource both for newcomers to the research fields described, and for other scientists seeking detailed background information on special questions. Finally, it provides an accredited documentation of the valuable contributions made by today’s younger generation of scientists.

Theses are accepted into the series by invited nomination only and must fulfill all of the following criteria

- They must be written in good English.
- The topic should fall within the confines of Chemistry, Physics, Earth Sciences, Engineering and related interdisciplinary fields such as Materials, Nanoscience, Chemical Engineering, Complex Systems and Biophysics.
- The work reported in the thesis must represent a significant scientific advance.
- If the thesis includes previously published material, permission to reproduce this must be gained from the respective copyright holder.
- They must have been examined and passed during the 12 months prior to nomination.
- Each thesis should include a foreword by the supervisor outlining the significance of its content.
- The theses should have a clearly defined structure including an introduction accessible to scientists not expert in that particular field.

Supervisor's Foreword

The anomalous Hall effect, i.e., the transverse response of current by internal magnetization, was discovered by Edwin Hall in 1881, soon after his discovery of the normal Hall effect induced by a magnetic field. Nevertheless, an accurate theoretical understanding in terms of topology in the momentum space or real space has been attained only in recent years. This new stage in condensed-matter physics is now going to provide a more fertile ground for materials science and spintronic technology than what was anticipated previously. This book summarizes the Ph.D. thesis work by Yuki Shiomi on anomalous and topological Hall effects in itinerant magnets. Versatile new Hall phenomena and the interpretations in terms of modernized theoretical models are described here as precious fruits of his diligent study for six years in our laboratory.

One of the highlights described in this book is the study of the Hall effects induced by a heat current, i.e., the Righi-Leduc and Nernst-Ettingshausen effects. Dr. Shiomi has revealed unique properties of the anomalous and topological Hall effects by combining the measurements with electrical and heat currents. I hope that the contents of this book are useful as well as stimulating for researchers and students who are interested in magnetotransport properties of itinerant magnets.

Acknowledgments

The present work is a result of my six years of research in the Department of Applied Physics of The University of Tokyo. All of that time I was in a wonderful research environment. I owe a sincere debt of gratitude to many people, especially to Prof. Yoshinori Tokura, Prof. Yoshinori Onose, Prof. Satoshi Iguchi, Dr. Yasujiro Taguchi, Prof. Shintaro Ishiwata, Dr. Yoshio Kaneko, Prof. Masahito Mochizuki, Dr. Shin Miyahara, Dr. Hideaki Sakai, Dr. Takeshi Suzuki, Ms. Akiko Kikkawa, Dr. Jun Fujioka, Dr. Shinichiro Seki, Dr. Masaki Uchida, Mr. Shinichi Kumakura, Mr. Toshiya Ideue, Mr. Naoya Kanazawa, and Mr. Kiyou Shibata, for fruitful discussions and constant support for experiments. I appreciate the helpful comments from Prof. Naoto Nagaosa, Dr. Shigeki Onoda, Prof. Masashi Kawasaki, Prof. Yasuo Endo, Prof. Jun Akimitsu, Prof. Atsutaka Maeda, and Prof. Yukitoshi Motome. Finally, I would like to thank my parents and sister for their kind encouragement.
