Aims and Scope. The project is to publish *Advances in Mathematical Economics* once a year under the auspices of the Research Center for Mathematical Economics. It is designed to bring together those mathematicians who are seriously interested in obtaining new challenging stimuli from economic theories and those economists who are seeking effective mathematical tools for their research.

The scope of *Advances in Mathematical Economics* includes, but is not limited to, the following fields:

- Economic theories in various fields based on rigorous mathematical reasoning.
- Mathematical methods (e.g., analysis, algebra, geometry, probability) motivated by economic theories.
- Mathematical results of potential relevance to economic theory.
- Historical study of mathematical economics.

Authors are asked to develop their original results as fully as possible and also to give a clear-cut expository overview of the problem under discussion. Consequently, we will also invite articles which might be considered too long for publication in journals.

Contents

On the Integration of Fuzzy Level Sets	1
Charles Castaing, Christiane Godet-Thobie, Thi Duyen Hoang, and P. Raynaud de Fitte	
A Theory for Estimating Consumer's Preference from Demand	33
Yuhki Hosoya	
Least Square Regression Methods for Bermudan Derivatives and Systems of Functions	57
Shigeo Kusuoka and Yusuke Morimoto	
Discrete Time Optimal Control Problems on Large Intervals	91
Alexander J. Zaslavski	
Index	137
