ACKNOWLEDGMENTS

This book of 'comparative ophiolitology' is based on a great number of structural observations which have been made in peridotite massifs and ophiolites by members and students of my group over the last 20 years. Several ideas developed here were first formulated by them. I wish to thank you all, Françoise Boudier, Jean-Luc Bouchez, Jean-Claude Mercier, Anne-Marie Boullier, Michel Darot, Yves Gueguen, Philippe Coisy, Marie Jackson, Alain Prinzhofer, Daniel Cassard, Jean-François Violette, Dominique Sécher, Jacques Girardeau, Maxime Misseri, François Cordellier, Mathilde Cannat, Georges Ceuleneer and Keith Benn.

Colleagues who participated directly in the preparation of this book were F. Boudier, C. Dupuy and M. Rabinowicz, who wrote or rewrote a few sections, and Y. Bottinga, P.J. Fox, K. Benn, P. Nehlig, H.G. Avé Lallemant, D. Mainprice, A. Prinzhofer, G. Ceuleneer, M. Leblanc, C.J. MacLeod, G. Suhr, R.S. Coe, C. Mével, J.F. Karson, J. Girardeau, M. Cannat, R.G. Coleman, J.C. Bodinier, and T. Juteau who reviewed parts of the manuscript. Thanks also go to all those who helped with the final draft of the manuscript. Finally, the book was prepared camera-ready thanks to the careful collaboration of M.C. Bréhier, A. Cossard, R. Bonnet, B. Allard and F. Pialoux with a special mention for E. Ball who composed and drew the illustrations and S. Fournier who coordinated the text.

Thanks to all of you,
Montpellier,
December 1st, 1988,
A. NICOLAS

TABLE OF CONTENTS

PART I - INTRODUCTION AND ANALYTICAL METHODS

<i>Chapter 1. Introduction</i>	3
1.1. Historical development of the ophiolite concept	3
1.2. Interest of ophiolite studies	6
1.2.1. Ophiolites as key for the study of oceanic lithosphere and asthenosphere	6
1.2.2. Ophiolites as markers of past plate tectonics	7
1.3. Scope and structure of the book	8
<i>Chapter 2. Analytical methods in ophiolites</i>	9
2.1. Introduction	9
2.2. The oceanic reference frame	9
2.2.1. The ridge referential	9
2.2.2. Ridge side of origin of a given ophiolite	10
2.3. Structural studies in the hypovolcanic and volcanic sequences	12
2.4. Structural studies in the plutonic sequence	13
2.4.1. Principal structures	13
2.4.2. Viscous/plastic deformation	13
2.4.3. Importance of viscous flow	20
2.5. Structural studies in the ultramafic section	20
2.5.1. Homogeneity of mantle structures	20
2.5.2. Principal structures	20
2.5.3. Melt products : evidence for segregation/impregnation	23
2.5.4. Microstructures in peridotites and kinematic analysis	24
2.5.5. Microstructural imprint of asthenospheric and lithospheric flow	27
2.5.6. Serpentinization and low temperature deformations	29
2.6. Expected asthenospheric flow patterns	29

PART II - TYPICAL OPHIOLITE COMPLEXES

Introduction	35
Chapter 3. Oman ophiolite : the harzburgite ophiolite type	37
3.1. Introduction	37
3.2. Geological setting	40
3.2.1. Geodynamic setting	40
3.2.2. History of the Hawasina basin	40
3.3. General description of the ophiolite	46
3.3.1. Introduction	46
3.3.2. Mafic section	49
3.3.3. Ultramafic section	61
3.3.4. Metamorphic aureoles	67
3.3.5. High pressure metamorphism	68
3.4. Structure of the Oman ophiolite	68
3.4.1. Introduction-main structural events	68
3.4.2. Structures related to accretion at the spreading center	70
3.4.3. Structures related to oceanic thrusting and obduction	78
3.5. General interpretation of the Oman ophiolite	85
3.5.1. Introduction	85
3.5.2. Spreading rate estimation	85
3.5.3. Paleo-environment of origin and obduction history	85
Chapter 4. Xigaze and Trinity ophiolites-Plagioclase lherzolite massifs : the lherzolite ophiolite type	91
4.1. Introduction	91
4.2. Xigaze ophiolite	91
4.2.1. Introduction	91
4.2.2. Geological setting	91
4.2.3. Description	94
4.2.4. Structural analysis	98
4.2.5. Geochemistry	100
4.2.6. Discussion	102
4.3. Trinity ophiolite	105
4.3.1. Introduction	105
4.3.2. Geological setting	105
4.3.3. Description	106
4.3.4. Structural analysis	111
4.3.5. Melt extraction and melt reaction	111
4.3.6. Petrology and geochemistry	112
4.3.7. Discussion	113

4.4. The western Alps ophiolites	115
4.5. The spinel-plagioclase herzolite massifs	120
4.5.1. Petrological zonation	120
4.5.2. Structural zonation	120
4.5.3. Structure and geodynamic environment	126
4.5.4. Contact metamorphism and nature of metamorphosed formations	126
<i>Chapter 5. Bogota Peninsula and N.E. districts of New Caledonia - Wadi Tayin in Oman - Coastal Complex of Newfoundland : possible origin in transform faults</i>	127
5.1. Introduction	127
5.2. Bogota Peninsula and N.E. ophiolitic districts of New-Caledonia	127
5.2.1. Introduction	127
5.2.2. Geological setting	129
5.2.3. Description of the Bogota Peninsula shear zone	132
5.2.4. Description of the Tiebaghi-Poum-Belep shear zone	135
5.2.5. Discussion	140
5.3. Coastal Complex of Newfoundland	142
5.3.1. Introduction	142
5.3.2. Geological setting	145
5.3.3. Description	145
5.3.4. Petrology and geochemistry	148
5.3.5. Interpretation	148
5.4. Wadi Tayin massif in Oman	153
5.4.1. Introduction	153
5.4.2. Structural description	153
5.4.3. Discussion	153
5.5. Conclusion	155
5.5.1. The diversity of ophiolitic transforms	155
5.5.2. Dike orientation in transform zones	157
<i>Chapter 6. Canyon Mountain ophiolite : possible origin in an island arc</i>	159
6.1. Introduction	159
6.2. Geological setting	159
6.3. Description	161
6.4. Structural analysis	163
6.5. Petrology and geochemistry	164

6.6. Discussion	166
6.6.1. Specific characteristics of the Canyon Mountain ophiolite	166
6.6.2. Structural models	166
6.6.3. Geodynamic environment of origin	167

PART III - ACTIVITY OF OCEANIC SPREADING CENTERS AND THE ORIGIN OF OPHIOLITES

<i>Introduction</i>	169
----------------------------	-----

<i>Chapter 7. Melt generation and extraction in mantle diapirs</i>	169
---	-----

7.1. Introduction	171
7.2. Melt extraction from the asthenosphere	171
7.2.1. Conditions of adiabatic melting	171
7.2.2. Asthenospheric path and the meeting with lithospheric conditions	173
7.2.3. Depth of first melting	175
7.2.4. Maximum depth of melt extraction	177
7.3. Physical mechanisms of melt extraction	177
7.3.1. Fraction of stable melt in a peridotite	177
7.3.2. Melt extraction	178
7.4. A model of melt extraction by hydrofracturing	180
7.4.1. The model	180
7.4.2. Melt velocity within dikes, episodicity and duration of episodes of melt extraction	181
7.4.3. Geochemical implications	182
7.5. Melt extraction by solid compaction and melt percolation in transition zones of ophiolites	183
7.6. Focusing of melt extraction below oceanic ridges	184

<i>Chapter 8. The various ophiolites and their oceanic environments of origin</i>	187
--	-----

8.1. Introduction	187
8.2. Harzburgite and lherzolite types of ophiolites - Role of spreading rate	188
8.2.1. Distinctive characteristics	188
8.2.2. Harzburgite and lherzolite types of ophiolites and mantle partial melting	193
8.2.3. Harzburgite and lherzolite types of ophiolites and oceanic environments	193
8.3. Island-arc, back-arc or mid-ocean ophiolites	199
8.3.1. Geochemical characteristics	199
8.3.2. Other criteria	200

Chapter 9 . Mantle flow, lithospheric accretion and segmentation of oceanic ridges	203
9.1. Introduction	203
9.2. Mantle flow in the Oman ophiolite	205
9.2.1. Introduction	205
9.2.2. Homogeneous mantle flow away from the ridge-Relation with seismic anisotropy	207
9.2.3. Channeling of mantle flow along the ridge axis	207
9.2.4. Mantle flow in transform faults	209
9.2.5. Mantle flow in diapirs	209
9.2.6. Mantle flow patterns beneath the Oman paleo-ridge	209
9.3. Mantle flow in the Trinity ophiolite and lherzolite massifs	210
9.4. Mantle diapirism and ridge segmentation	211
9.4.1. Introduction	211
9.4.2. Models of mantle diapirs	213
9.4.3. Return flow and thickness of the buoyant layer	215
9.4.4. Spacing of mantle diapirs and ridge segmentation	215
9.4.5. Stability of mantle diapirs	220
Chapter 10. Magmatic processes in the uppermost mantle at oceanic spreading centers	223
10.1. Introduction	223
10.2. Principal characteristics of transition zones	223
10.3. Origin of the wehrlitic intrusions	224
10.4. Origin of dunites	225
10.4.1. Introduction	225
10.4.2. Field occurrences	226
10.4.3. Residual/magmatic origin	227
10.4.4. Mechanism of formation of residual dunites	233
10.4.5. Geochemical reequilibration	235
10.4.6. Conclusion as to the origin of dunites	236
10.5. Structure and origin of the chromite deposits	237
10.5.1. Introduction	237
10.5.2. Setting of chromite deposits	237
10.5.3. Structure of chromite deposits	238
10.5.4. Composition of chromite deposits	247
10.5.5. Origin of chromite deposits	251
Chapter 11 - Generation of oceanic crust	253
11.1. Introduction	253

11.2. Lithology of ophiolites and seismic structure of the oceanic crust	254
11.3. Serpentinite sea-floor in slow spreading environments and LOT	258
11.3.1. Abyssal and ophiolitic peridotites	258
11.3.2. Serpentinized peridotites as sea-floor	258
11.3.3. Nature of the Moho	260
11.4. The plutonic section and the problem of magma chambers	261
11.4.1. Introduction	261
11.4.2. Origin of the layering in the plutonic gabbro sequence	262
11.4.3. Magma chamber models	263
11.4.4. Conclusions about magma chamber models	268
11.4.5. Plating of gabbros and diking at the roof of magma chambers	270
11.4.6. Initiation of a new magma chamber	272
11.5. Sheeted dikes and volcanic units	274
11.5.1. Introduction	274
11.5.2. Generation at rifts and ridges	274
11.5.3. Structural evolution of the volcanic-hypovolcanic units	277
11.6. Crustal discontinuities in Iherzolite type of ophiolite and episodic oceanic spreading	279
11.6.1. Variable basalt delivery along ridge-strike	279
11.6.2. Episodic basalt delivery in time	280
11.7. Early metamorphism in ophiolites and hydrothermal activity at oceanic ridges	281
11.7.1. Introduction	281
11.7.2. Metamorphic-zonation in ophiolites	282
11.7.3. Relationship with the sequence of hydrothermal alteration in oceanic crust	284

PART IV - EMPLACEMENT OF OPHIOLITES THROUGH SPACE AND TIME

<i>Chapter 12 - Ophiolites emplacement</i>	289
12.1. Introduction	289
12.2. Ophiolite belts	292
12.2.1. Passive margins of continents	292
12.2.2. Active margins of continents	292
12.2.3. Collision belts	294
12.3. Emplacement-related features in ophiolites	294
12.3.1. Introduction	294
12.3.2. Ophiolite nappes and high temperature aureoles	294
12.3.3. Ophiolitic mélanges and high pressure metamorphism	300
12.4. Mechanisms of ophiolite emplacement	300
12.4.1. Introduction	300

12.4.2. Thrusting on passive continental margins	303
12.4.3. Upheaval in the accretionary prism of active margins	308
12.5. Summary and concluding remarks	310
<i>Chapter 13 - Ophiolite belts through time</i>	313
13.1. Introduction : a reappraisal of ophiolites and their oceanic environments	313
13.2. Ophiolites generation and emplacement through time	313
13.3. Ophiolites as witness of pangean cycles	316
<i>Bibliography</i>	321
<i>Index</i>	359
