TABLE OF CONTENTS*

PREFACE	IX
E. A. TRENDELENBURG / Opening Address	XI
LIST OF PARTICIPANTS	XIII

1. INTRODUCTORY LECTURES

A. A. LUCAS / Fundamental Processes in Particle and Photon Interactions with Surfaces	3
G. L. SISCOE / The Particle Environment in Space	23

2. INTERACTIONS WITH SPACECRAFT

2.1. *Theoretical Sheath Models*

H. SCHRÖDER / Spherically Symmetric Model of the Photoelectron Sheath for Moderately Large Plasma Debye Lengths	51
J. K. E. TUNALEY and J. JONES / The Photoelectron Sheath around a Spherical Body (presented by R. J. L. Grard)	59
E. H. WALKER / Plasma Sheath and Screening of Charged Bodies	73
T. R. KAISER and P. C. KENDALL / The Distortion of an Electromagnetic Wave Field by a Cavity in a Cold Magneto-Plasma	91

2.2. *Numerical Analysis and Simulation*

H. WEIL, H. JEW, and U. SAMIR / Structure of the Ionospheric Disturbances about Planetary Entry Probes	101
M. SOOP / Numerical Calculations of the Perturbation of an Electric Field around a Spacecraft	127

2.3. *Influence of Surface Emission on Experimental Measurements*

H. R. ROSENBAUER / Possible Effects of Photoelectron Emission on a Low Energy Electron Experiment	139
D. P. CAUFFMAN / The Effects of Photoelectron Emission on a Multiple-Probe Spacecraft near the Plasmapause	153
R. J. L. GRARD, K. KNOTT, and A. PEDERSEN / The Influence of Photoelectron and Secondary Electron Emission on Electric Field Measurements in the Magnetosphere and Solar Wind (presented by K. Knott)	163

* Contributions presented by first author, unless specified otherwise.

2.4. *Particle Energy Distributions Around Spacecraft*

U. SAMIR / Charged Particle Distribution in the Nearest Vicinity of Ionospheric Satellites – Comparison of the Main Results from the Ariel I, Explorer 31 and Gemini-Agena 10 Spacecraft	193
G. L. WRENN and W. J. HEIKKILA / Photoelectrons Emitted from ISIS Spacecraft	221
K. NORMAN and R. M. FREEMAN / Energy Distribution of Photoelectrons Emitted from a Surface on the OGO-5 Satellite and Measurements of Satellite Potential	231

2.5. *Potential of the Spacecraft Surface*

M. D. MONTGOMERY, J. R. ASBRIDGE, S. J. BAME, and E. W. HONES / Low-Energy Electron Measurements and Spacecraft Potential: Vela 5 and Vela 6	247
S. E. DEFOREST / Electrostatic Potentials Developed by ATS-5	263
R. W. FREDRICKS and F. L. SCARF / Observations of Spacecraft Charging Effects in Energetic Plasma Regions	277
B. POLYCHRONOPOULOS and C. V. GOODALL / A System for Measuring and Controlling the Surface Potential of Rockets Flown in the Ionosphere	309

2.6. *Spacecraft Surface Materials*

M. BUJOR / Work Function Variation Across the Surface of Tungsten and Vitreous Carbon	323
M. ANDEREGG, B. FEUERBACHER, and B. FITTON / Experimental Investigation of Photoemission from Satellite Surface Materials	331
H. KÖSTLIN and A. ATZEI / Present State of the Art in Conductive Coating Technology	333

3. INTERACTIONS WITH CELESTIAL OBJECTS

3.1. *Electric Properties of the Moon Surface and Environment*

R. H. MANKA / Plasma and Potential at the Lunar Surface	347
J. W. FREEMAN, JR., M. A. FENNER, and H. K. HILLS / The Electric Potential of the Moon in the Solar Wind	363
D. L. REASONER and W. J. BURKE / Measurement of the Lunar Photoelectron Layer in the Geomagnetic Tail	369
R. F. WILLIS, M. ANDEREGG, B. FEUERBACHER, and B. FITTON / Photoemission and Secondary Electron Emission from Lunar Surface Material	389

3.2. *Influence of Surface Emission on the Properties of Other Celestial Objects*

S. D. SHAWHAN, R. F. HUBBARD, G. JOYCE, and D. A. GURNETT / Sheath Acceleration of Photoelectrons by Jupiter's Satellite Io	405
B. FEUERBACHER, R. F. WILLIS, and B. FITTON / Electrostatic Charging and Formation of Composite Interstellar Grains	415

3.3. *Solar Wind Interactions with Celestial Objects*

R. H. MANKA and F. C. MICHEL / Lunar Ion Flux and Energy	429
D. R. CRISWELL / Photoelectrons and Lunar Limb Shocks	443
S. T. WU and M. DRYER / Kinetic Theory Analysis of Solar Wind Interaction with Planetary Objects	453
B. R. LICHTENSTEIN, P. J. COLEMAN, JR., and C. T. RUSSELL / Magnetic Measurements of the Solar Wind Interaction with the Moon (presented by G. L. Siscoe)	471
L. J. SRNKA / Observation of TM-Mode Induction in a Simulated Solar Wind/Moon Interaction	481

3.4. *Solar X-Ray Interaction with the Lunar Surface*

I. ADLER, J. I. TROMBKA, and L. I. YIN / Lunar Composition from Apollo Orbital Measurements (presented by D. R. Criswell)	501
---	-----

3.5. *Erosion Processes on the Lunar Surface*

T. GOLD / Sputtering and Darkening of the Grains on the Lunar Surface	517
E. H. WALKER / The Lunar Electrosphere and Implications for Erosion on the Moon	521
D. R. CRISWELL / Horizon-Glow and the Motion of Lunar Dust	545
T. GOLD and G. J. WILLIAMS / Electrostatic Transportation of Dust on the Moon	557

4. LECTURES IN CONCLUSION

U. FAHLESON / Plasma-Vehicle Interactions in Space – Some Aspects on Present Knowledge and Future Development	563
T. GOLD / Particle Interactions with Celestial Objects – Concluding Remarks	571
INDEX OF AUTHORS	577

PREFACE

The 6th ESLAB Symposium, organised by the Space Science Department (formerly ESLAB) of the European Space Research and Technology Center, was held in Noordwijk from 26–29 September 1972. This year the theme was “Photon and Particle Interactions with Surfaces in Space”. More than 60 scientists attended mainly from ESRO Member States and from America.

The first part of the Symposium was devoted to introductory lectures and to papers on interactions with spacecraft. The second half dealt with the photon and particle interactions with celestial objects, and ended with a general discussion and presentations of areas where new developments are required.

The purpose of this Symposium was to throw light on the importance of the problems which are evoked by E. A. Trendelenburg in his introductory remarks, and to sum up our present understanding of these phenomena. It is hoped that this book will prove useful to physicists and engineers who are actually involved in space experiments and are concerned with interactions of these types.

R. J. L. GRARD

OPENING ADDRESS

Gentlemen,

I should like to welcome you to the 6th ESLAB Symposium.

In the past we have always organised this Symposium jointly with our sister institute, ESRIN, in Frascati, but unfortunately reductions in the scientific budget have forced ESRO to terminate the activities of that laboratory. Nevertheless, we have decided to carry on the tradition, and we shall continue on our own organising this series of symposia on specialised subjects.

The reason for choosing this year's particular topic is almost historical. Several years ago, when I was appointed Director of ESLAB by the ESRO Council, I thought that we should devote some effort to Surface Physics. I felt, at that time, that progress in this domain would eventually benefit other fields of space research. Indeed, the importance of Surface Physics in space has outgrown my initial expectations, and today I find it extremely rewarding that the first symposium entirely devoted to this problem is being presented to such a distinguished audience.

Presently, spacecraft are venturing further and further away from the Earth, probing the tenuous medium of the magnetosphere and interplanetary space. More than ever we need to understand the influence of photon and particle fluxes on the electric properties of the surface of a space probe, and to evaluate the extent to which the output of a scientific experiment can be modified by such phenomena. Similar processes also occur at the surface of celestial bodies and may give the clue to phenomena which have been observed, but remain so far unexplained.

It seems to me very promising that physicists coming from different horizons of science – theoreticians, laboratory and space experimenters, as well as lunar specialists – have decided to gather and to compound their knowledge in the very specialised field which deals with the interactions between a surface and its environment in space. It can be expected that the outcome of the discussions between people having such different backgrounds will help to clarify and improve our present understanding of these important problems.

I hope that you will find this meeting useful and profitable, and I sincerely wish you a pleasant stay here in Noordwijk.

I now declare the 6th ESLAB Symposium open.

26 September 1972

E. A. TRENDELENBURG

LIST OF PARTICIPANTS

- Anderegg, M., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Andresen, R. D., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Arens, I., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Atzei, A., Energy Conversion Division, ESTEC, Domeinweg, Noordwijk, Holland
- Boeckel, J. J. van, Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Bujor, M., Groupe de Recherches Ionosphériques, 4, ave. de Neptune, 94, Saint-Maur-des-Fossés, France
- Cauffman, D. P., Bldg. 120, Room 1405, The Aerospace Corporation, P.O. Box 92957, Los Angeles, Calif. 90009, U.S.A.
- Criswell, D. R., Lunar Science Institute, 3303 NASA Road 1, Houston, Tex. 77058, U.S.A.
- Dauphin, J., Reliability Division, ESTEC, Domeinweg, Noordwijk, Holland
- DeForest, S. E., Physics Department University of California, San Diego, La Jolla, Calif. 92037, U.S.A.
- Domingo, V., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Durney, A. C., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Fahleson, U. V., Department of Plasma Physics, Royal Institute of Technology, S-100 44 Stockholm 70, Sweden
- Feuerbacher, B., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Fitton, B., Space Science Department, ESTEC, Domeinweg, Noordwijk, Holland
- Fredricks, R. W., TRW Systems Group, Space Sciences Department, One Space Park, Building R-1, Room 1070, Redondo Beach, Calif. 90278, U.S.A.
