TABLE OF CONTENTS

PREFACE		ix
CHAPTER 1. PRELIMINARIES		1
1.1 Introduction and Literature Review		1
1.2 Notations		2
1.3 Some Results from Matrix Algebra		6
1.4 A Functional Equation		17
CHAPTER 2. BASIC PROPERTIES		19
2.1 Definition		19
2.2 Probability Density Function		26
2.3 Marginal Distributions		31
2.4 Expected Value and Covariance		32
2.5 Stochastic Representation		35
2.6 Conditional Distributions		47
2.7 Examples		70
CHAPTER 3. PROBABILITY DENSITY FUNCTION AND EXPECTED VALUES		80
3.1 Probability Density Function		80
3.2 More on Expected Values		91
CHAPTER 4. MIXTURE OF NORMAL DISTRIBUTIONS		130
4.1 Mixture by Distribution Functions		130
4.2 Mixture by Weighting Functions		150

CHAPTER 5.	QUADRATIC FORMS AND OTHER FUNCTIONS OF ELLIPTICALLY CONTOURED MATRICES	162
5.1	Cochran's Theorem	162
5.2	Rank of Quadratic Forms	179
5.3	Distribution of Invariant Matrix Variate Functions	182
CHAPTER 6.	CHARACTERIZATION RESULTS	190
6.1	Characterizations Based on Invariance	190
6.2	Characterizations of Normality	193
CHAPTER 7.	ESTIMATION	224
7.1	Maximum Likelihood Estimators of the Parameters	224
7.2	Properties of the Estimators	238
CHAPTER 8.	HYPOTHESIS TESTING	252
8.1	General Results	252
8.2	Two Models	258
8.3	Testing Criteria	263
CHAPTER 9.	LINEAR MODELS	285
9.1	Estimation of the Parameters in the Multivariate Linear Regression Model	285
9.2	Hypothesis Testing in the Multivariate Linear Regression Model	297
9.3	Inference in the Random Effects Model	302

PREFACE

In multivariate statistical analysis, elliptical distributions have recently provided an alternative to the normal model. Most of the work, however, is spread out in journals throughout the world and is not easily accessible to the investigators. Fang, Kotz, and Ng presented a systematic study of multivariate elliptical distributions, however, they did not discuss the matrix variate case. Recently Fang and Zhang have summarized the results of generalized multivariate analysis which include vector as well as the matrix variate distributions. On the other hand, Fang and Anderson collected research papers on matrix variate elliptical distributions, many of them published for the first time in English. They published very rich material on the topic, but the results are given in paper form which does not provide a unified treatment of the theory. Therefore, it seemed appropriate to collect the most important results on the theory of matrix variate elliptically contoured distributions available in the literature and organize them in a unified manner that can serve as an introduction to the subject.

The book will be useful for researchers, teachers, and graduate students in statistics and related fields whose interests involve multivariate statistical analysis. Parts of this book were presented by Arjun K. Gupta as a one semester course at Bowling Green State University. Some new results have also been included which generalize the results in Fang and Zhang. Knowledge of matrix algebra and statistics at the level of Anderson is assumed. However, Chapter 1 summarizes some results of matrix algebra. This chapter also contains a brief review of the literature and a list of mathematical symbols used in the book.

Chapter 2 gives the basic properties of the matrix variate elliptically contoured distributions, such as the probability density function and expected values. It also presents one of the most important tools of the theory of elliptical distributions, the stochastic representation.

The probability density function and expected values are investigated in detail in Chapter 3.

Chapter 4 focuses on elliptically contoured distributions that can be represented as mixtures of normal distributions.

The distributions of functions of random matrices with elliptically contoured distributions are discussed in Chapter 5. Special attention is given to quadratic forms.

Characterization results are given in Chapter 6.

The last three chapters are devoted to statistical inference. Chapter 7 focuses on estimation results, whereas Chapter 8 is concerned with hypothesis testing problems. Inference for linear models is studied in Chapter 9. Finally, an up to date bibliography has been provided, along with author and subject indexes.

We would like to thank the Department of Mathematics and Statistics, Bowling Green State University, for supporting our endeavour and for providing the necessary facilities to accomplish the task. The first author is thankful to the Biostatistics Department, University of Michigan, for providing him the opportunity to organize the material in its final form. Thanks are also due to Professors A. M. Kshirsagar, D. K. Nagar, M. Siotani, and J. Tang for many helpful discussions. He would also like to acknowledge his wife, Meera, and his children, Alka, Mita, and Nisha for their support throughout the writing of the book.

Particular gratitude is rendered to Cynthia Patterson for her efficient technical word processing. We also express our appreciation to the publisher and especially to Dr. D. J. Larner for his sustained interest in the project.
