Acknowledgements

The synthesis and production of this manual involved many talented people, and we are extremely grateful for their creative and diligent efforts:

- Two to four outside reviewers anonymously critiqued each chapter for technical content. The excellent ideas and comments of these reviewers contributed to the high quality of chapters.
- Carol Perry's organizational and editing skills were instrumental in adding clarity and continuity to the book.
- The chapter authors were patient, thorough, hardworking and above all knowledgeable about their subject areas. Ultimately, it was their willingness to take on this "one more commitment" and their resolve to complete the task that made publication of this book possible.
- We also thank Adrian Plaizier for his patience and commitment to the project as well as his advice and encouragement.

We acknowledge with appreciation the financial support of the Department of Forestry, University of Florida, and the School of Forest Resources, University of Georgia.
