Archimedes

NEW STUDIES IN THE HISTORY AND PHILOSOPHY OF
SCIENCE AND TECHNOLOGY

VOLUME 4

EDITOR

JED Z. BUCHWALD, *Bern Dibner Professor of the History of Science at MIT, and
Director of The Dibner Institute for the History of Science and Technology,
Cambridge, MA, USA.*

ADVISORY BOARD

HENK BOS, *University of Utrecht*
MORDECHAI FEINGOLD, *Virginia Polytechnic Institute*
ALLAN D. FRANKLIN, *University of Colorado at Boulder*
KOSTAS GAVROGLU, *National Technical University of Athens*
ANTHONY GRAFTON, *Princeton University*
FREDERIC L. HOLMES, *Yale University*
PAUL HOYNINGEN-HUENE, *University of Hannover*
EVELYN FOX KELLER, *MIT*
TREVOR LEVERE, *University of Toronto*
JESPER LÜTZEN, *Copenhagen University*
WILLIAM NEWMAN, *Harvard University*
JÜRGEN RENN, *Max-Planck-Institut für Wissenschaftsgeschichte*
ALAN SHAPIRO, *University of Minnesota*
NANCY SIRAISS, *Hunter College of the City University of New York*
MERRITT ROE SMITH, *MIT*
NOEL SWERDLOW, *University of Chicago*

Archimedes has three fundamental goals; to further the integration of the histories of science and technology with one another: to investigate the technical, social and practical histories of specific developments in science and technology; and finally, where possible and desirable, to bring the histories of science and technology into closer contact with the philosophy of science. To these ends, each volume will have its own theme and title and will be planned by one or more members of the Advisory Board in consultation with the editor. Although the volumes have specific themes, the series itself will not be limited to one or even to a few particular areas. Its subjects include any of the sciences, ranging from biology through physics, all aspects of technology, broadly construed, as well as historically-engaged philosophy of science or technology. Taken as a whole, *Archimedes* will be of interest to historians, philosophers, and scientists, as well as to those in business and industry who seek to understand how science and industry have come to be so strongly linked.

Contents

Preface	xi
I Introductory Orientations	1
1 Introduction	3
1.1 Introductory Remarks	3
1.2 Early Eclipse Records	5
1.3 Basic Eclipse Theory	9
1.4 Methods of Analysis	15
1.5 A Note on the Conventions used in this Study	17
II The Western Heritage	19
2 Mesopotamia	21
2.1 Introduction	21
2.2 Sources of Astronomical Records	23
2.3 Dating Babylonian Astronomical Tablets	34
2.3.1 LBAT 1456	37
2.3.2 LBAT 1452	40
2.3.3 LBAT 1413	43
2.4 Units of Time	45
2.5 Eclipse Records in Late Babylonian History	52
2.6 Accuracy of the Observed Times	57
2.7 Accuracy of the Predicted Times	68
2.8 Methods of Eclipse Prediction	75
3 The Greco-Roman World	85
3.1 Introduction	85
3.2 The Demotic Eclipse Text P. Berlin 13147 + 13146	86
3.3 Eclipse Observations in Ptolemy's <i>Almagest</i>	91
3.3.1 Babylonian Observations	93

3.3.2	Early Greek Observations	100
3.3.3	Later Greek Observations	102
3.4	A Solar Eclipse Observation by Theon of Alexandria	103
3.5	Accuracy of the Observed Times	104
4	The Islamic Near East	107
4.1	Introduction	107
4.2	Timed Eclipse Records from the Islamic Near East	108
4.2.1	Ḥabash	112
4.2.2	al-Māhānī	113
4.2.3	al-Battānī	114
4.2.4	The Banū Amājūr	116
4.2.5	Ibn Yūnus	117
4.2.6	al-Bīrūnī	119
4.3	Accuracy of the Observed and Predicted Times	121
5	Late Medieval and Renaissance Europe	125
5.1	Introduction	125
5.2	European Astronomical Tables	126
5.3	Observational Techniques and Instruments	129
5.4	Timed Eclipse Records in European History	133
5.4.1	Isaac ben Sid	134
5.4.2	Levi ben Gerson	135
5.4.3	Jean de Murs	137
5.4.4	Regiomontanus	139
5.4.5	Bernard Walther	144
5.4.6	Nicholas Copernicus	147
5.4.7	Tycho Brahe	151
5.5	Accuracy of the Observed and Predicted Times	154
III	The Eastern Heritage	159
6	China	161
6.1	Introduction	161
6.2	Historical Outline	162
6.3	Sources of Astronomical Records	164
6.4	Calendrical Astronomy in China	169
6.4.1	Reckoning of Days	170
6.4.2	Eclipse Prediction	175
6.5	Units of Time	178
6.6	Methods of Time Measurement	188
6.7	Timed Eclipse Records in Chinese History	190

6.7.1	The <i>Sung-shu</i> , the <i>Sui-shu</i> , the <i>Chiu T'ang-shu</i> , and the <i>Sung-shih</i>	192
6.7.2	The <i>Yuan-shih</i>	197
6.7.3	The <i>Wen-hsien T'ung-k'ao</i>	201
6.7.4	Other Sources	208
6.8	Accuracy of the Observed Times	208
6.9	Accuracy of the Predicted Times	213
7	Japan	217
7.1	Introduction	217
7.2	Calendrical Astronomy in Japan	218
7.3	Timed Eclipse Records in Japanese History	220
7.4	Accuracy of the Predicted Times	225
IV	Conclusions	229
8	Discussion	231
8.1	Historical Implications	231
8.2	Geophysical Implications	232
8.3	Concluding Remarks	235

Preface

Most of the research presented in this book was undertaken during my time as a PhD student at the Department of Physics of the University of Durham. I am pleased to record here my sincerest gratitude to my degree supervisor, F. Richard Stephenson, with whom I had the honour to work. I also wish to thank the Department of Physics for its generous provision of a Departmental Studentship, without which this study would not have been possible, and for its continued support of research into the history of astronomy. Also in Durham I wish to thank the members of the Departments of History and Archaeology for the interest they have shown in this work. The manuscript for this book was completed during my time as a Postdoctoral Fellow at the Dibner Institute for the History of Science and Technology. I thank the Institute both for this award, and for providing a stimulating atmosphere in which to complete this work.

There are many friends and colleagues who have helped with this work in different ways. Hermann Hunger generously sent me his editions of the Babylonian eclipse texts in advance of publication. Christopher Walker provided transliterations of several unpublished tablets and answered many questions concerning Babylonian texts. Norbert Roughton provided many references to eclipses in the Babylonian Almanacs and Normal Star Almanacs. Peter Huber and Nathan Sivin kindly made available to me copies of their unpublished manuscripts. For various discussions during the course of this work I thank John Britton, Alexander Jones, Leslie Morrison, Noel Swerdlow, and Benno van Dalen. I also thank Ben Weiss of the Burndy Library for help selecting illustrations.

Some preliminary results from this work have appeared in a series of papers published in the *Journal for the History of Astronomy*,¹ the *Bulletin of the School of Oriental and African Studies*,² and *Centaurus*.³ I wish to thank my co-authors, and the editors and publishers of these journals for permission to revise those works here.
