

DYNAMICAL SYSTEMS AND COSMOLOGY

ASTROPHYSICS AND SPACE SCIENCE LIBRARY

VOLUME 291

EDITORIAL BOARD

Chairman

W.B. BURTON, National Radio Astronomy Observatory, Charlottesville, Virginia, U.S.A.
(burton@starband.net); University of Leiden, The Netherlands (burton@strw.leidenuniv.nl)

Executive Committee

- J. M. E. KUIJPERS, *Faculty of Science, Nijmegen, The Netherlands*
E. P. J. VAN DEN HEUVEL, *Astronomical Institute, University of Amsterdam,
The Netherlands*
H. VAN DER LAAN, *Astronomical Institute, University of Utrecht,
The Netherlands*

MEMBERS

- I. APPENZELLER, *Landessternwarte Heidelberg-Königstuhl, Germany*
J. N. BAHCALL, *The Institute for Advanced Study, Princeton, U.S.A.*
F. BERTOLA, *Università di Padova, Italy*
J. P. CASSINELLI, *University of Wisconsin, Madison, U.S.A.*
C. J. CESARSKY, *Centre d'Etudes de Saclay, Gif-sur-Yvette Cedex, France*
O. ENGVOLD, *Institute of Theoretical Astrophysics, University of Oslo, Norway*
R. McCRAY, *University of Colorado, JILA, Boulder, U.S.A.*
P. G. MURDIN, *Institute of Astronomy, Cambridge, U.K.*
F. PACINI, *Istituto Astronomia Arcetri, Firenze, Italy*
V. RADHAKRISHNAN, *Raman Research Institute, Bangalore, India*
K. SATO, *School of Science, The University of Tokyo, Japan*
F. H. SHU, *University of California, Berkeley, U.S.A.*
B. V. SOMOV, *Astronomical Institute, Moscow State University, Russia*
R. A. SUNYAEV, *Space Research Institute, Moscow, Russia*
Y. TANAKA, *Institute of Space & Astronautical Science, Kanagawa, Japan*
S. TREMAINE, *CITA, Princeton University, U.S.A.*
N. O. WEISS, *University of Cambridge, U.K.*

DYNAMICAL SYSTEMS AND COSMOLOGY

by

A.A. COLEY

Dalhousie University, Halifax, Canada

Springer-Science+Business Media, B.V.

A C.I.P. Catalogue record for this book is available from the Library of Congress.

ISBN 978-90-481-6329-8 ISBN 978-94-017-0327-7 (eBook)
DOI 10.1007/978-94-017-0327-7

Contents

I.	Introduction	1
	A. Self-similarity	3
II.	The Theory of Dynamical Systems	7
	A. Linear Autonomous Differential Equations	8
	1. Topological Equivalence	13
	2. Linear Stability	14
	B. Non-Linear Differential Equations	15
	1. Liapunov Theory	17
	2. Linearization and the Hartman-Grobman Theorem	19
	C. Periodic Orbits and The Poincaré-Bendixson Theorem in the Plane	21
	D. More General Non-Linear Behaviour	23
	1. Higher Dimensions	23
III.	Spatially Homogeneous Models	27
	A. Definitions and Kinematical Quantities	28
	B. Asymptotic States of Perfect Fluid Bianchi Models	30
	C. More Recent Work	33
	D. Scalar Field Models	36
	E. Harmonic Potentials	39
	1. Analysis	40
	2. Chaos	42
IV.	Scalar Field Cosmologies with Barotropic Matter	44
	A. Models of Bianchi Class B: The Equations	44
	1. Invariant Sets, Monotone Functions and The Constraint Surface	46
	B. Classification of the Equilibrium Points	48
	1. Scalar Field Models	50
	2. Perfect Fluid Models	52
	3. Scaling Solutions	53

C.	Stability of the Equilibrium Points and Some Global Results	55
D.	Discussion	57
V.	Physical Applications	59
A.	Isotropisation	59
1.	Analysis of the Bianchi VII _h Equations	60
B.	Matter Scaling Solutions	62
1.	Stability of the Matter Scaling Solution	63
VI.	Closed Models	67
A.	Closed Friedmann Models	67
1.	Qualitative Analysis	69
B.	Kantowski-Sachs Models	73
1.	Qualitative Analysis	76
C.	Discussion	80
VII.	Multiple Scalar Fields	82
1.	The Model	83
A.	Qualitative Analysis of the Two-Scalar Field Model	84
1.	Assisted Inflation	85
2.	Stability of Equilibria and Discussion	85
B.	Qualitative Analysis of the Two-Scalar Field Model with Matter	88
1.	Invariant Sets, Monotonic Functions and Stability of Equilibria	88
2.	Matter Scaling Solutions	90
C.	Qualitative Analysis of the Three-Scalar Field Model	91
D.	Discussion	94
VIII.	Scalar Tensor Theories of Gravity	96
1.	Stiff Perfect Fluids in General Relativity	97
A.	Scalar-Tensor Theories of Gravity with No Potential	98
1.	Application: Brans-Dicke Theory	98
B.	Scalar Tensor Theories with a Non-Zero Potential	100

1. Application	101
C. Inhomogeneous Models	103
1. Inhomogeneous	104
IX. Magnetic Field Cosmology	106
A. Bianchi VI_0 Models	107
1. Discussion of Qualitative Properties	109
B. Bianchi I Models	111
1. Qualitative Analysis	112
X. String Cosmology	116
1. Low-Energy Effective Action	118
A. Cosmological Field Equations	121
1. Exact Solutions	121
2. Pre-Big Bang Cosmology	123
B. Qualitative Analysis of the NS-NS Sector	124
1. Models with Positive Central Charge Deficit	125
C. Qualitative Analysis of the Matter Sector	129
1. Positive Cosmological Constant	130
2. Discussion	132
D. Cyclical Behaviour in Early Universe Cosmologies	134
1. Non-Zero Central Charge Deficit	135
2. Discussion	138
XI. Anisotropic and Curved String Cosmologies	140
A. Non-Zero Central Charge Deficit	141
1. The Case $\Lambda > 0, \tilde{K} > 0$	142
2. The Case $\Lambda > 0, \tilde{K} < 0$	146
3. The Case $\Lambda < 0, \tilde{K} > 0$	148
4. The Case $\Lambda < 0, \tilde{K} < 0$	150
B. Discussion	152

XII. M-Theory	156
1. Four-Dimensional Effective Action	157
A. Cosmological Field Equations	159
B. Structure of State Space and Local Analysis	161
1. Qualitative Analysis of Spatially Flat Cosmologies	162
2. Physical Interpretation	163
C. Discussion	166
1. Effects of Spatial Curvature	166
2. Inhomogeneous String Cosmology	168
3. Future Work	171
Acknowledgments	174
References	175
