

Navigation: Science and Technology

The series Navigation: Science and Technology (NST) presents new developments and advances in various aspects of navigation - from land navigation, marine navigation, aeronautic navigation, to space navigation; and from basic theories, mechanisms, to modern techniques. It publishes monographs, edited volumes, lecture notes and professional books on topics relevant to navigation - quickly, up to date and with a high quality. A special focus of the series is the technologies of the Global Navigation Satellite Systems (GNSSs), as well as the latest progress made in the existing systems (GPS, BDS, Galileo, GLONASS, etc.). To help readers keep abreast of the latest advances in the field, the key topics in NST include but are not limited to:

- Satellite Navigation Signal Systems
- GNSS Navigation Applications
- Position Determination
- Navigational Instrument
- Atomic Clock Technique and Time-Frequency System
- X-ray Pulsar-based Navigation and Timing
- Test and Evaluation
- User Terminal Technology
- Navigation in Space
- New Theories and Technologies of Navigation
- Policies and Standards

Contents

1	Introduction	1
1.1	Basics of Wireless Positioning	2
1.2	Overview of the Book	5
2	Designing Positioning Systems	9
2.1	Introduction	9
2.2	Overview of Positioning Systems Architecture	10
2.2.1	Navigation	10
2.2.2	Tracking	12
2.2.3	Mesh Positioning Systems	13
2.3	Overview of Design Procedures	15
2.3.1	Functional Requirements	15
2.3.2	Selection of Radio Frequency and Bandwidth	17
2.3.3	Radio Propagation Characteristics in the Operating Environment	18
2.3.4	Time-of-Arrival Measurements	19
2.3.5	Link Budget	22
2.3.6	Time and Frequency Synchronization	23
2.3.7	Data Communications Requirements	26
2.3.8	Position Determination	28
2.3.9	Auxiliary Sensors Requirements	30
2.4	Tracking Systems Design	30
2.5	Mesh Network Design	32
	References	34
3	Signaling Techniques	37
3.1	Introduction	37
3.2	Pulse Shapes and Energy Spectrum	37
3.2.1	Ultra-wideband Spectrum Masks	38
3.2.2	Rectangular Pulse	39

3.2.3	Gaussian Pulse and Its Derivatives	40
3.2.4	Raised Cosine Pulse	41
3.2.5	Gaussian Modulated Sinusoidal Pulse	44
3.2.6	Chirp Waveform	45
3.3	Modulation Techniques for Positioning	48
3.3.1	Typical UWB Modulation Techniques	49
3.3.2	Pulse-Based Systems, Single-Carrier Systems and Multi-carrier Systems	53
3.3.3	Single-Antenna Systems Versus Multiple-Antenna Systems	55
3.4	Spread-Spectrum Techniques	56
3.4.1	Three Basic Spectrum Spreading Approaches	57
3.4.2	Spreading Codes	59
3.5	Radar and FMCW	65
3.5.1	Pulse Radar	65
3.5.2	FMCW Radar	65
3.5.3	FMCW for Network Based Positioning	69
	References	72
4	Time-of-Arrival Measurements	75
4.1	Introduction	75
4.2	Overview of Time-of-Arrival Measurements	75
4.2.1	Overview of TOA Measurements	76
4.2.2	Transmitter to Receiver Timing Measurements	78
4.2.3	Overview of TOA Algorithms	81
4.2.4	Theoretical Gaussian Noise Performance	89
4.2.5	TOA Algorithm Multipath Performance	90
4.2.6	Statistical Effect of Signal Bandwidth	95
4.2.7	Measured Indoor TOA Errors	97
	References	98
5	Time and Frequency Synchronization	101
5.1	Introduction	101
5.2	Time Synchronization in Tracking Systems	102
5.2.1	Time Synchronisation with Three Base Stations	103
5.2.2	Timing Reference Transmitter Architecture	104
5.2.3	Performance Measurements Using the Timing Reference System	108
5.2.4	Calibrating the Timing Reference System	111
5.3	Frequency Control in Tracking Systems	113
5.3.1	Overview	113
5.3.2	Details of the Frequency Control Loop	115
5.3.3	Example of Control Loop	119
5.4	Frequency Control in Mesh Network Systems	120

5.4.1	Frequency Synchronization Procedure	123
5.4.2	Estimation of Range Errors Due to Motion	124
5.4.3	Frequency Synchronization for Mobile Nodes	126
References	130
6	Enhanced Least Squares Positioning	131
6.1	Introduction	131
6.2	Enhanced Iterative LS Method	132
6.2.1	Position Determination Analysis	132
6.2.2	Bias Parameter λ	137
6.3	Enhanced LS Algorithm Characteristics	138
6.3.1	Generalized Solution	139
6.3.2	Biased Error Solution	141
6.4	Determination of the Bias Parameter	142
6.4.1	Optimal Bias Parameter	142
6.4.2	Determining λ_{opt} from Measured Data	145
6.5	Measured Performance	147
References	153
7	Use of Sensors for Position Determination	155
7.1	Overview of Sensor Position Determination	155
7.2	Sensors for Mobile Location Devices	157
7.2.1	Magnetometers	158
7.2.2	Rate Gyroscopes	159
7.2.3	Accelerometers	159
7.2.4	Measurement Errors and Calibration	160
7.3	Introduction to Complementary Filters	165
7.3.1	Complementary Filtering—An Overview	165
7.3.2	Basic Complementary Filter	166
7.3.3	Enhanced Filtering to Remove Rate-Gyro Bias Errors	170
7.3.4	Filtering Rate-Gyro Scale Factor Errors	173
7.3.5	Measured Performance	175
7.4	Velocity Determination Using Radiolocation and Inertial Data	177
7.4.1	Introduction	177
7.4.2	Theoretical Analysis	177
7.5	Assessment of the Benefits of Using Gyros and Accelerometers	188
7.6	Heading Angle Using Radiolocation and Gyroscope Data	190
7.6.1	Overview	190
7.6.2	Basic Theory	191
7.6.3	Heading Determination	193
7.6.4	Kalman Filter Design	196

7.6.5	Measurement Errors	199
7.7	Determining Stride Length Using Accelerometer	202
7.7.1	Overview of Theory of Stride Length Determination	203
7.7.2	Dimensional Analysis	203
7.7.3	Data on the Human Body	205
7.7.4	Simple Dynamical Model of Walking	205
7.7.5	Measurements	209
	References	217
8	Indoor WiFi Positioning	219
8.1	Introduction	219
8.2	Access Point Selection	220
8.2.1	MM Method	220
8.2.2	Information Gain Based Method	221
8.2.3	Mutual Information Based Method	222
8.2.4	Performance Comparison Among Different Selection Methods	223
8.3	RSSI Measurement Accuracy Improvement	225
8.3.1	Mean Algorithm	225
8.3.2	Mean Maximum Method	226
8.4	Weighted K-Nearest Neighbors Algorithm	234
8.5	Radius Based Domain Clustering Method	236
	References	239
9	Link Budgets and System Design for Positioning Systems	241
9.1	Introduction	241
