

Springer Series in Materials Science

Volume 210

Series editors

Robert Hull, Troy, USA

Chennupati Jagadish, Canberra, Australia

Yoshiyuki Kawazoe, Sendai, Japan

Richard M. Osgood, New York, USA

Jürgen Parisi, Oldenburg, Germany

Udo W. Pohl, Berlin, Germany

Tae-Yeon Seong, Seoul, Republic of Korea (South Korea)

Shin-ichi Uchida, Tokyo, Japan

Zhiming M. Wang, Chengdu, China

The Springer Series in Materials Science covers the complete spectrum of materials physics, including fundamental principles, physical properties, materials theory and design. Recognizing the increasing importance of materials science in future device technologies, the book titles in this series reflect the state-of-the-art in understanding and controlling the structure and properties of all important classes of materials.

Preface

Recently, carbon-based materials have received much attention for their many potential applications. The carbon fibers are very strong, stiff, and lightweight, enabling the carbon materials to deliver improved performance in several applications such as aerospace, sports, automotive, wind energy, oil and gas, infrastructure, defense, and semiconductors. However, the use of carbon fibers in cost-sensitive, high-volume industrial applications is limited because of their relatively high costs. However, its production is expected to increase because of its widespread use in high-volume industrial applications; therefore, the methods used for manufacturing carbon fibers and carbon fiber-reinforced composites and their structures and characteristics need to be investigated.

This second edition book contains ten chapters that discuss the manufacturing methods, surface treatment, composite interfaces, microstructure–property relationships with underlying fundamental physical and mechanical principles, and applications of carbon fibers and their composites.

Chapter 1 provides a brief overview of carbons and carbon fibers, including their origin, history, manufacturing technologies, performance, and global market trends. Chapter 2 introduces the precursors and manufacturing processes of carbon fibers. Chapter 3 lists the various matrices for carbon fiber composites, and focuses on the thermosetting resins and thermoplastic resins. Chapter 4 reviews the effect of surface treatment on the properties of carbon fiber composites. The characteristics of carbon fibers were measured using XPS, X-ray diffraction (XRD), EA, Raman spectroscopy, scanning tunneling microscopy (SEM), and atomic force microscopy (AFM), and are presented in Chap. 5. The selection of manufacturing processes, matrix type, and molding processes for carbon fiber composites are presented in Chap. 6. Chapter 7 describes the recent use of carbon fibers for applications such as adsorbents, energy storage, molecular sieves, catalysts, carbon fiber-reinforced composites. Chapter 8 discusses the carbon/carbon composites, how to manufacturing them, and their properties such as thermal and mechanical properties.

Chapter 9 introduces low-cost techniques for general industries, thin carbon fibers for extreme industries, and smart carbon/carbon composites. Lastly, Chap. 10 describes prospectives and outlook of carbon fibers.

The authors are grateful to everyone who has contributed to this book.

Contents

1	History and Structure of Carbon Fibers	1
1.1	Introduction	1
1.2	Origin and History of Carbon Fibers	4
1.3	Definition of Carbon Fibers	5
1.4	Classification of Carbon Fibers	6
1.4.1	Performance	6
1.4.2	Precursor	8
1.4.3	Commercial Availability	16
1.5	Structure of Carbon Fibers	18
1.6	State of Carbon Fiber Industry	21
1.6.1	Technology Development Trends	21
1.6.2	Utility Development Trends	22
1.6.3	Market Trends	24
1.7	Summary	27
	References	27
2	Precursors and Manufacturing of Carbon Fibers	31
2.1	Introduction	31
2.2	Acrylic Precursors	32
2.2.1	PAN Precursors	33
2.2.2	Polymerization Methods for Production of PAN-Based Precursors	35
2.2.3	Manufacture of Carbon Fibers from PAN-Based Precursors	36
2.2.4	Types of Polyacrylonitrile-Based Carbon Fibers	44
2.3	Cellulosic Precursors	44
2.3.1	Cellulosic Precursors	44
2.3.2	Rayon Precursor for Production of Cellulose-Based Carbon Fibers	46
2.3.3	Manufacture of Carbon Fibers from Cellulosic Precursors	51

2.4	Pitch Precursors	54
2.4.1	Petroleum Pitch Precursors	54
2.4.2	Coal-Tar Pitch Precursors	55
2.4.3	Preparation Methods of Pitch-Based Precursors	56
2.4.4	Manufacture of Carbon Fibers from Pitch-Based Precursors	60
2.5	Other Forms of Precursors	62
2.6	Summary	63
	References	63
3	Matrices for Carbon Fiber Composites	69
3.1	Thermosetting Resins	69
3.1.1	Introduction	69
3.1.2	Cyanate Ester Resins	70
3.1.3	Epoxy Resins	72
3.1.4	Phenolic Resins	79
3.1.5	Polyester Resins	82
3.1.6	Polyimide Resins	85
3.1.7	Vinyl Ester Resins	87
3.2	Thermoplastic Resins	89
3.2.1	Introduction	89
3.2.2	Acrylonitrile Butadiene Styrene Resins	89
3.2.3	Polyamide Resins	90
3.2.4	Polycarbonate Resins	91
3.2.5	Polyetheretherketone Resins	92
3.2.6	Polyetherimide Resins	94
3.2.7	Polyethersulfone Resins	94
3.2.8	Polyethylene Resins	96
3.2.9	Polyphenylene Sulfide Resins	97
3.2.10	Polypropylene Resins	98
	References	100
4	Surface Treatment and Sizing of Carbon Fibers	105
4.1	Introduction	105
4.2	Oxidation of Carbon Fibers	106
4.2.1	Gaseous Oxidants	106
4.2.2	Acid Oxidation	113
4.2.3	Electrochemical Oxidation	117
4.2.4	Treatment with Nonoxidative Agents	120
4.3	Plasma Treatment	120
4.4	Other Surface Modification Methods	122
4.4.1	Radiation	122
4.4.2	Fluorination	124

4.4.3	Polymer Coating	128
4.4.4	Grafting with Inorganic Materials	128
4.5	Sizing	130
	References	133
5	Testing of Carbon Fibers and Their Composites	139
5.1	Introduction	139
5.2	Evaluation of Carbon Fibers	139
5.2.1	Introduction	139
5.2.2	Elemental Analysis	140
5.2.3	X-Ray Photoelectron Spectroscopy	140
5.2.4	X-Ray Diffraction	144
5.2.5	Raman Spectroscopy	146
5.2.6	Auger Electron Spectroscopy	147
5.2.7	Scanning Tunneling Microscopy (STM)	148
5.2.8	Atomic Force Microscopy	148
5.2.9	Titration	151
5.2.10	Moisture Content	151
5.2.11	Thermal Stability and Oxidative Resistance	151
5.2.12	Filament Diameter	152
5.2.13	Electrical Resistivity	156
5.2.14	Coefficient of Thermal Expansion	157
5.2.15	Thermal Conductivity	159
5.2.16	Specific Heat	159
5.2.17	Thermal Transition Temperature	159
5.2.18	Tensile Properties	160
5.3	Evaluation of Composites	160
5.3.1	Introduction	160
5.3.2	Coefficient of Thermal Expansion	161
5.3.3	Thermal Conductivity	161
5.3.4	Poisson's Ratio	162
5.3.5	Rheological Analysis	162
5.3.6	Tensile Behavior	165
5.3.7	Shear Strength	166
5.3.8	Flexural Behavior	169
5.3.9	Uniaxial Compressive Behavior	170
5.4	Fatigue	171
5.4.1	Creep	173
5.4.2	Impact Behavior	174
5.4.3	Fracture Toughness	175

5.5	Relationship Between Surface and Interfacial Properties in Composites	177
5.5.1	Surface Free Energy and Work of Adhesion	177
5.5.2	Surface Free Energy Analysis Using Linear Fit Method	178
5.5.3	Weibull Distribution	180
	References	182
6	Manufacture of Carbon Fiber Composites	185
6.1	Selection of Manufacturing Process for Carbon Fiber Composites	185
6.2	Type of Reinforcement	186
6.2.1	Multiend and Single-End Rovings	187
6.2.2	Mats	187
6.2.3	Woven, Stitched, and Braided Fabrics	187
6.2.4	Unidirectional	189
6.2.5	Sandwich Construction	190
6.2.6	Prepregs	191
