

**SpringerBriefs in Applied Sciences  
and Technology**

SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50–125 pages, the series covers a range of content from professional to academic.

Typical publications can be:

- A timely report of state-of-the art methods
- An introduction to or a manual for the application of mathematical or computer techniques
- A bridge between new research results, as published in journal articles
- A snapshot of a hot or emerging topic
- An in-depth case study
- A presentation of core concepts that students must understand in order to make independent contributions

SpringerBriefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.

On the one hand, **SpringerBriefs in Applied Sciences and Technology** are devoted to the publication of fundamentals and applications within the different classical engineering disciplines as well as in interdisciplinary fields that recently emerged between these areas. On the other hand, as the boundary separating fundamental research and applied technology is more and more dissolving, this series is particularly open to trans-disciplinary topics between fundamental science and engineering.

# Preface

Rotating machineries, often referred to as turbomachines, are machines that transmit energy between a rotor and a fluid. They include turbines, compressors, and pumps and are widely used in industries, namely power generation, oil and gas production, and petrochemical. This book discusses the maintenance aspect of rotating machines, through the collection of various works from different authors. The book has been written to provide views of experienced engineers in the aspect of maintenance of rotating machines. The book will be useful as a reference for practicing engineers in the related industries mentioned earlier. The book will provide them with a glimpse of some of the problems associated with rotating machines or equipment in the field and help them to achieve maximum performance efficiency and high availability. The editor would like to express his gratitude to all the contributing authors for their time, effort, and dedication in preparing the manuscripts for the book.

# Contents

<b>Condition Monitoring and Assessment for Rotating Machinery</b> . . . . .	1
Sundralingam Muthanandan and Khairul Anwar B. M. Nor	
<b>Turnaround Activities of Rotating Machinery for Mechanical Engineers</b> . . . . .	23
M. B. Baharom and M. Azrul Nizam B. M. Zahir	
<b>Localization of Gas Turbine Maintenance by Malaysian Gas Turbine Owners and Operators</b> . . . . .	43
Mohd Amin Abd Majid and Ismady Ismail	
<b>Probabilistic Life Cycle Costing: A Case Study of Centrifugal Pumps</b> . . . . .	53
Ainul Akmar Mokhtar, Freselam Mulubran and Masdi Muhammad	
<b>CFD Analysis of Fouling Effects on Aerodynamics Performance of Turbine Blades</b> . . . . .	73
A. T. Baheta, K. P. Leong, Shaharin Anwar Sulaiman and A. D. Fentaye	
<b>Electrohydrodynamic Pumps for Dielectric Liquid Application</b> . . . . .	85
Mohammad Shakir Nasif	
<b>Experimental Study on Electrical Power Generation from a 1-kW Engine Using Simulated Biogas Fuel</b> . . . . .	93
Suhaimi Hassan and Hamdan Ya
