Acknowledgments

This project was a long time in development and so I have been influenced by many people in this process. To my mentors: Dr Jim Twombly, who has been a fabulous teacher, mentor and friend, and is primarily responsible for my choice in academics as a career; Dr D Munroe Eagles, who first inspired my interest in the larger issue of representation and provided meaningful feedback in an early iteration of this project; the late Dr Franco Mattei, who set such a strong empirical foundation for my work and encouraged me to pay close attention to the details of my work; Dr Frank Zinni, for his mentorship all matters of public opinion and an interest to expand my statistical horizon; Dr Laurie Rhodebeck, for her academic mentorship and encouragement.

I am also thankful to my institution, Messiah College, headed by our amazing president, Dr Kim Phipps. Such an institution allows me space—though with a bit of trick to balance—my talents in teaching, research and administration thanks to the several programs which allow release time for scholarship. In addition to a host of fantastic colleagues across campus, too numerous to name, I would like to extend deepest thanks to some of the students who have assisted with this project: to Megan Wolf, my Smith Scholar Intern, who not only worked on the painstaking integration of congressional voting, but also helped with the ongoing tracking of pertinent research in the field; to Alejandro Garcia, who assisted in synthesis of literature in the latter stages of the project; to Solveig Parsons, another Smith Scholar Intern, who enthusiastically aided with
tedious review of manuscripts and references, among her work on other projects with me.

You would not be reading this page without the wonderful editorial group at Palgrave MacMillan, who saw the strengths in my manuscript. Their support and feedback throughout the final stages of the process has been invaluable. Specifically, I would like to extend my thanks to Scarlet Neath, who professionally shepherded my manuscript from submission to publication, and responding patiently to all my questions during the process. I also wish to express my appreciation to the production staff for this project, headed by Vidhya Jayaprakash, at Newgen Knowledge Works for making the final stages of manuscript preparation smooth and seamless.

While there are too many family and friends to list here individually in recognition of their support, certain people do need recognition: to Dr Lisa K. Parshall, who serves as my guidepost in reasoning through all kinds of personal and academic experiences, for a cherished friendship; to my grandmother, the late Virginia Szymanski, who had the largest heart, but did not suffer fools gladly, who still serves as an encouraging source of reason in times of challenge; to Ann, Kate and John DeCarlo, “family” who have provided the nurturance in my personal and professional goals. To my parents, Pamela and the late Richard Stanton, who encouraged me that anything was possible and provided me with the ability to appreciate perseverance. Last, but not least, to my husband Mark, who has granted me the space in our busy lives to maintain my focus and whose support means the most when my patience is in need of bolstering.
