18th International Conference Munich, Germany, October 5–9, 2015 Proceedings, Part III
In 2015, the 18th International Conference on Medical Image Computing and Computer-Assisted Intervention (MICCAI 2015) was held in Munich, Germany. It was organized by the Technical University Munich (TUM) and the Friedrich Alexander University Erlangen-Nuremberg (FAU). The meeting took place in the Philharmonic Hall “Gasteig” during October 6-8, one week after the world-famous Oktoberfest. Satellite events associated with MICCAI 2015 took place on October 5 and October 9 in the Holiday Inn Hotel Munich City Centre and Klinikum rechts der Isar. MICCAI 2015 and its satellite events attracted word-leading scientists, engineers, and clinicians, who presented high-standard papers, aiming at uniting the fields of medical image processing, medical image formation, and medical robotics.

This year the triple anonymous review process was organized in several phases. In total, 810 valid submissions were received. The review process was handled by one primary and two secondary Program Committee members for each paper. It was initiated by the primary Program Committee member, who assigned a minimum of three expert reviewers. Based on these initial reviews, 79 papers were directly accepted and 248 papers were rejected. The remaining papers went to the rebuttal phase, in which the authors had the chance to respond to the concerns raised by reviewers. The reviews and associated rebuttals were subsequently discussed in the next phase among the reviewers leading to the acceptance of another 85 papers and the rejection of 118 papers. Subsequently, secondary Program Committee members issued a recommendation for each paper by weighing both the reviewers’ recommendations and the authors’ rebuttals. This resulted in “accept” for 67 papers and in “reject” for 120 papers. The remaining 92 papers were discussed at a Program Committee meeting in Garching, Germany, in May 2015, where 36 out of 75 Program Committee members were present. During two days, the 92 papers were examined by experts in the respective fields resulting in another 32 papers being accepted. In total 263 papers of the 810 submitted papers were accepted which corresponds to an acceptance rate of 32.5%.

The frequency of primary and secondary keywords is almost identical in the submitted, the rejected, and the accepted paper pools. The top five keywords of all submissions were machine learning (8.3%), segmentation (7.1%), MRI (6.6%), and CAD (4.9%).

The correlation between the initial keyword counts by category and the accepted papers was 0.98. The correlation with the keyword distribution of the rejected papers was 0.99. The distributions of the intermediate accept and reject phases was also above 0.9 in all cases, i.e., there was a strong relationship between the submitted paper categories and the finally accepted categories. The keyword frequency was essentially not influenced by the review decisions. As a
VI  Preface

conclusion, we believe the review process was fair and the distribution of topics reflects no favor of any particular topic of the conference.

This year we offered all authors the opportunity of presenting their work in a five-minute talk. These talks were organized in 11 parallel sessions setting the stage for further scientific discussions during the poster sessions of the main single-track conference. Since we consider all of the accepted papers as excellent, the selection of long oral presentations representing different fields in a single track was extremely challenging. Therefore, we decided to organize the papers in these proceedings in a different way than in the conference program. In contrast to the conference program, the proceedings do not differentiate between poster and oral presentations. The proceedings are only organized by conference topics. Only for the sake of the conference program did we decide on oral and poster presentations. In order to help us in the selection process, we asked the authors to submit five-minute short presentations. Based on the five-minute presentations and the recommendations of the reviewers and Program Committee members, we selected 36 papers for oral presentation. We hope these papers to be to some extent representative of the community covering the entire MICCAI spectrum. The difference in raw review score between the poster and oral presentations was not statistically significant ($ p > 0.1$). In addition to the oral presentation selection process, all oral presenters were asked to submit their presentations two months prior to the conference for review by the Program Committee who checked the presentations thoroughly and made suggestions for improvement.

Another feature in the conference program is the industry panel that features leading members of the medical software and device companies who gave their opinions and presented their future research directions and their strategies for translating scientific observations and results of the MICCAI community into medical products.

We thank Aslı Okur, who did an excellent job in the preparation of the conference. She took part in every detail of the organization for more than one year. We would also like to thank Andreas Maier, who supported Joachim Hornegger in his editorial tasks following his election as president of the Friedrich Alexander University Erlangen-Nuremberg (FAU) in early 2015. Furthermore, we thank the local Organizing Committee for arranging the wonderful venue and the MICCAI Student Board for organizing the additional student events ranging from a tour to the BMW factory to trips to the world-famous castles of Neuschwanstein and Linderhof. The workshop, challenge, and tutorial chairs did an excellent job in enriching this year’s program. In addition, we thank the MICCAI society for provision of support and insightful comments as well as the Program Committee for their support during the review process. Last but not least, we thank our sponsors for the financial support that made the conference possible.

We look forward to seeing you in Istanbul, Turkey in 2016!

## Quantitative Image Analysis I: Segmentation and Measurement

Deep Convolutional Encoder Networks for Multiple Sclerosis Lesion Segmentation

Tom Brosch, Youngjin Yoo, Lisa Y.W. Tang, David K.B. Li, Anthony Traboulsee, and Roger Tam

Unsupervised Myocardial Segmentation for Cardiac MRI

Anirban Mukhopadhyay, Ilkay Oksuz, Marco Bevilacqua, Rohan Dharmakumar, and Sotirios A. Tsaftaris

Multimodal Cortical Parcellation Based on Anatomical and Functional Brain Connectivity

Chendi Wang, Burak Yoldemir, and Rafeef Abugharbieh

Slic-Seg: Slice-by-Slice Segmentation Propagation of the Placenta in Fetal MRI Using One-Plane Scribbles and Online Learning

Guotai Wang, Maria A. Zuluaga, Rosalind Pratt, Michael Aertsen, Anna L. David, Jan Deprest, Tom Vercauteren, and Sébastien Ourselin

GPSSI: Gaussian Process for Sampling Segmentations of Images

Matthieu Lê, Jan Unkelbach, Nicholas Ayache, and Hervé Delingette

Multi-level Parcellation of the Cerebral Cortex Using Resting-State fMRI

Salim Arslan and Daniel Rueckert

Interactive Multi-organ Segmentation Based on Multiple Template Deformation

Romane Gauriau, David Lesage, Mélanie Chiaradia, Baptiste Morel, and Isabelle Bloch

Segmentation of Infant Hippocampus Using Common Feature Representations Learned for Multimodal Longitudinal Data

Yanrong Guo, Guorong Wu, Pew-Thian Yap, Valerie Jewells, Weili Lin, and Dinggang Shen

Measuring Cortical Neurite-Dispersion and Perfusion in Preterm-Born Adolescents Using Multi-modal MRI

Andrew Melbourne, Zach Eaton-Rosen, David Owen, Jorge Cardoso, Joanne Beckmann, David Atkinson, Neil Marlow, and Sebastien Ourselin
Interactive Whole-Heart Segmentation in Congenital Heart Disease
Danielle F. Pace, Adrian V. Dalca, Tal Geva, Andrew J. Powell, Mehdi H. Moghari, and Polina Golland

Automatic 3D US Brain Ventricle Segmentation in Pre-Term Neonates Using Multi-phase Geodesic Level-Sets with Shape Prior
Wu Qiu, Jing Yuan, Jessica Kishimoto, Yimin Chen, Martin Rajchl, Eranga Ukwatta, Sandrine de Ribaupierre, and Aaron Fenster

Multiple Surface Segmentation Using Truncated Convex Priors
Abhay Shah, Junjie Bai, Zhihong Hu, Srinivas Sadda, and Xiaodong Wu

Eli Gibson, Henkjan J. Huisman, and Dean C. Barratt

Joint Learning of Image Regressor and Classifier for Deformable Segmentation of CT Pelvic Organs
Yaozong Gao, Jun Lian, and Dinggang Shen

Corpus Callosum Segmentation in MS Studies Using Normal Atlases and Optimal Hybridization of Extrinsic and Intrinsic Image Cues
Lisa Y.W. Tang, Ghassan Hamarneh, Anthony Traboulsee, David Li, and Roger Tam

Brain Tissue Segmentation Based on Diffusion MRI Using $\ell_0$ Sparse-Group Representation Classification
Pew-Thian Yap, Yong Zhang, and Dinggang Shen

A Latent Source Model for Patch-Based Image Segmentation
George H. Chen, Devavrat Shah, and Polina Golland

Multi-organ Segmentation Using Shape Model Guided Local Phase Analysis
Chunliang Wang and Ørjan Smedby

Filling Large Discontinuities in 3D Vascular Networks Using Skeleton- and Intensity-Based Information
Russell Bates, Laurent Risser, Benjamin Irving, Bartłomiej W. Papież, Pavitra Kannan, Veerle Kersemans, and Julia A. Schnabel

A Continuous Flow-Maximisation Approach to Connectivity-Driven Cortical Parcellation
Sarah Parisot, Martin Rajchl, Jonathan Passerat-Palmbach, and Daniel Rueckert
A 3D Fractal-Based Approach Towards Understanding Changes in the Infarcted Heart Microvasculature ........................................ 173
Polyxeni Gkontra, Magdalena M. Žak, Kerri-Ann Norton, Andrés Santos, Aleksander S. Popel, and Alicia G. Arroyo

Segmenting the Uterus in Monocular Laparoscopic Images without Manual Input .......................................................... 181
Toby Collins, Adrien Bartoli, Nicolas Bourdel, and Michel Canis

Progressive Label Fusion Framework for Multi-atlas Segmentation by Dictionary Evolution ............................................. 190
Yantao Song, Guorong Wu, Quansen Sun, Khosro Bahrami, Chunming Li, and Dinggang Shen

Multi-atlas Based Segmentation Editing with Interaction-Guided Constraints ................................................................. 198
Sang Hyun Park, Yaozong Gao, and Dinggang Shen

Quantitative Image Analysis II: Microscopy, Fluorescence and Histological Imagery

Improving Convenience and Reliability of 5-ALA-Induced Fluorescent Imaging for Brain Tumor Surgery .............................. 209
Hiroki Taniguchi, Noriko Kohira, Takashi Ohnishi, Hiroshi Kawahira, Mikael von und zu Fraunberg, Juha E. Jääskeläinen, Markku Hauta-Kasari, Yasuo Iwadate, and Hideaki Haneishi

Analysis of High-Throughput Microscopy Videos: Catching Up with Cell Dynamics ......................................................... 218
A. Arbelle, N. Drayman, M. Bray, U. Alon, A. Carpenter, and T. Riklin Raviv

Neutrophils Identification by Deep Learning and Voronoi Diagram of Clusters ................................................................. 226
Jiazhuo Wang, John D. MacKenzie, Rageshree Ramachandran, and Danny Z. Chen

U-Net: Convolutional Networks for Biomedical Image Segmentation .......................................................... 234
Olaf Ronneberger, Philipp Fischer, and Thomas Brox

Co-restoring Multimodal Microscopy Images ............................... 242
Mingzhong Li and Zhaozheng Yin

A 3D Primary Vessel Reconstruction Framework with Serial Microscopy Images ................................................................. 251
Yanhui Liang, Fusheng Wang, Darren Treanor, Derek Magee, George Teodoro, Yangyang Zhu, and Jun Kong
## Part III

Adaptive Co-occurrence Differential Texton Space for HEp-2 Cells

**Classification** .................................................... 260

*Xiang Xu, Feng Lin, Carol Ng, and Khai Pang Leong*

Learning to Segment: Training Hierarchical Segmentation under a Topological Loss .................................................. 268

*Jan Funke, Fred A. Hamprecht, and Chong Zhang*

You Should Use Regression to Detect Cells .......................... 276

*Philipp Kainz, Martin Urschler, Samuel Schulter, Paul Wohlhart, and Vincent Lepetit*

A Hybrid Approach for Segmentation and Tracking of *Mycococcus Xanthus* Swarms ......................................................... 284

*Jianxu Chen, Shant Mahserejian, Mark Alber, and Danny Z. Chen*

Fast Background Removal in 3D Fluorescence Microscopy Images Using One-Class Learning .............................................. 292

*Lin Yang, Yizhe Zhang, Ian H. Guldner, Siyuan Zhang, and Danny Z. Chen*

Motion Representation of Ciliated Cell Images with Contour-Alignment for Automated CBF Estimation ................................. 300

*Fan Zhang, Yang Song, Siqi Liu, Paul Young, Daniela Traini, Lucy Morgan, Hui-Xin Ong, Lachlan Buddle, Sidong Liu, Dagan Feng, and Weidong Cai*

Multimodal Dictionary Learning and Joint Sparse Representation for HEp-2 Cell Classification ........................................ 308

*Ali Taalimi, Shahab Ensafi, Hairong Qi, Shijian Lu, Ashraf A. Kassim, and Chew Lim Tan*

Cell Event Detection in Phase-Contrast Microscopy Sequences from Few Annotations ......................................................... 316

*Melih Kandemir, Christian Wojek, and Fred A. Hamprecht*

Robust Muscle Cell Quantification Using Structured Edge Detection and Hierarchical Segmentation ................................. 324

*Fujun Liu, Fuyong Xing, Zizhao Zhang, Mason Mcgough, and Lin Yang*

Fast Cell Segmentation Using Scalable Sparse Manifold Learning and Affine Transform-Approximated Active Contour ............... 332

*Fuyong Xing and Lin Yang*

Restoring the Invisible Details in Differential Interference Contrast Microscopy Images ....................................................... 340

*Wenchao Jiang and Zhaozheng Yin*
A Novel Cell Detection Method Using Deep Convolutional Neural Network and Maximum-Weight Independent Set .......................... 349
Fujun Liu and Lin Yang

Beyond Classification: Structured Regression for Robust Cell Detection Using Convolutional Neural Network ........................................ 358
Yuanpu Xie, Fuyong Xing, Xiangfei Kong, Hai Su, and Lin Yang

Joint Kernel-Based Supervised Hashing for Scalable Histopathological Image Analysis ................................................................. 366
Menglin Jiang, Shaoting Zhang, Junzhou Huang, Lin Yang, and Dimitris N. Metaxas

Deep Voting: A Robust Approach Toward Nucleus Localization in Microscopy Images ................................................................. 374
Yuanpu Xie, Xiangfei Kong, Fuyong Xing, Fujun Liu, Hai Su, and Lin Yang

Robust Cell Detection and Segmentation in Histopathological Images Using Sparse Reconstruction and Stacked Denoising Autoencoders .... 383
Hai Su, Fuyong Xing, Xiangfei Kong, Yuanpu Xie, Shaoting Zhang, and Lin Yang

Automatic in Vivo Cell Detection in MRI ........................................ 391
Muhammad Jamal Afridi, Xiaoming Liu, Erik Shapiro, and Arun Ross

Quantitative Image Analysis III: Motion, Deformation, Development and Degeneration

Automatic Vessel Segmentation from Pulsatile Radial Distension .... 403
Alborz Amir-Khalili, Ghassan Hamarneh, and Rafeef Abgharbieh

A Sparse Bayesian Learning Algorithm for Longitudinal Image Data .... 411
Mert R. Sabuncu

Descriptive and Intuitive Population-Based Cardiac Motion Analysis via Sparsity Constrained Tensor Decomposition .......................... 419
K. McLeod, M. Sermesant, P. Beerbaum, and X. Pennec

Liver Motion Estimation via Locally Adaptive Over-Segmentation Regularization ................................................................. 427
Bartłomiej W. Papieć, Jamie Franklin, Mattias P. Heinrich, Fergus V. Gleeson, and Julia A. Schnabel

Motion-Corrected, Super-Resolution Reconstruction for High-Resolution 3D Cardiac Cine MRI ........................................ 435
Freddy Odille, Aurélien Bustin, Bailiang Chen, Pierre-André Vuissoz, and Jacques Felblinger
Motion Estimation of Common Carotid Artery Wall Using a H$_\infty$ Filter
Zhifan Gao, Huahua Xiong, Heye Zhang, Dan Wu, Minhua Lu, Wangqing Wu, Kelvin K.L. Wong, and Yuan-Ting Zhang

Gated-Tracking: Estimation of Respiratory Motion with Confidence
Valeria De Luca, Gábor Székely, and Christine Tanner

Solving Logistic Regression with Group Cardinality Constraints for Time Series Analysis
Yong Zhang and Kilian M. Pohl

Spatiotemporal Parsing of Motor Kinematics for Assessing Stroke Recovery
Borislav Antic, Uta Büchler, Anna-Sophia Wahl, Martin E. Schwab, and Björn Ommer

Longitudinal Analysis of Pre-term Neonatal Brain Ventricle in Ultrasound Images Based on Convex Optimization
Wu Qiu, Jing Yuan, Jessica Kishimoto, Yimin Chen, Martin Rajchl, Eranga Ukwatta, Sandrine de Ribaupierre, and Aaron Fenster

Multi-GPU Reconstruction of Dynamic Compressed Sensing MRI
Tran Minh Quan, Sohyun Han, Hyungjoon Cho, and Won-Ki Jeong

Prospective Identification of CRT Super Responders Using a Motion Atlas and Random Projection Ensemble Learning
Devis Peressutti, Wenjia Bai, Thomas Jackson, Manav Sohal, Aldo Rinaldi, Daniel Rueckert, and Andrew King

Motion Compensated Abdominal Diffusion Weighted MRI by Simultaneous Image Registration and Model Estimation (SIR-ME)
Sila Kurugol, Moti Freiman, Onur Afacan, Liran Domachovsky, Jeannette M. Perez-Rossello, Michael J. Callahan, and Simon K. Warfield

Fast Reconstruction of Accelerated Dynamic MRI Using Manifold Kernel Regression
Kanwal K. Bhatia, Jose Caballero, Anthony N. Price, Ying Sun, Jo V. Hajnal, and Daniel Rueckert

Predictive Modeling of Anatomy with Genetic and Clinical Data
Adrian V. Dalca, Ramesh Sridharan, Mert R. Sabuncu, and Polina Golland
Joint Diagnosis and Conversion Time Prediction of Progressive Mild Cognitive Impairment (pMCI) Using Low-Rank Subspace Clustering and Matrix Completion .................................................. 527
   Kim-Han Thung, Pew-Thian Yap, Ehsan Adeli-M., and Dinggang Shen

Learning with Heterogeneous Data for Longitudinal Studies ............... 535
   Letizia Squarcina, Cinzia Perlini, Marcella Bellani, Antonio Lasalvia, Mirella Ruggeri, Paolo Brambilla, and Umberto Castellani

Parcellation of Infant Surface Atlas Using Developmental Trajectories of Multidimensional Cortical Attributes ........................................ 543
   Gang Li, Li Wang, John H. Gilmore, Weili Lin, and Dinggang Shen

Graph-Based Motion-Driven Segmentation of the Carotid Atherosclerotic Plaque in 2D Ultrasound Sequences ............................. 551
   Aimilia Gastounioti, Aristeidis Sotiras, Konstantina S. Nikita, and Nikos Paragios

Cortical Surface-Based Construction of Individual Structural Network with Application to Early Brain Development Study ............... 560
   Yu Meng, Gang Li, Weili Lin, John H. Gilmore, and Dinggang Shen

Quantitative Image Analysis IV: Classification, Detection, Features, and Morphology

NEOCIVET: Extraction of Cortical Surface and Analysis of Neonatal Gyrification Using a Modified CIVET Pipeline ............................ 571
   Hosung Kim, Claude Lepage, Alan C. Evans, A. James Barkovich, and Duan Xu

Learning-Based Shape Model Matching: Training Accurate Models with Minimal Manual Input .................................................. 580
   Claudia Lindner, Jessie Thomson, The arcOGEN Consortium, and Tim F. Cootes

Scale and Curvature Invariant Ridge Detector for Tortuous and Fragmented Structures .................................................. 588
   Roberto Annunziata, Ahmad Kheirkhah, Pedram Hamrah, and Emanuele Trucco

Boosting Hand-Crafted Features for Curvilinear Structure Segmentation by Learning Context Filters ............................. 596
   Roberto Annunziata, Ahmad Kheirkhah, Pedram Hamrah, and Emanuele Trucco
Kernel-Based Analysis of Functional Brain Connectivity on Grassmann Manifold ........................................................ 604
Luca Dodero, Fabio Sambataro, Vittorio Murino, and Diego Sona

A Steering Engine: Learning 3-D Anatomy Orientation Using Regression Forests ............................................ 612
 Fitsum A. Reda, Yiqiang Zhan, and Xiang Sean Zhou

Automated Localization of Fetal Organs in MRI Using Random Forests with Steerable Features ................................................ 620
Kevin Keraudren, Bernhard Kainz, Ozan Oktay, Vanessa Kyriakopoulou, Mary Rutherford, Joseph V. Hajnal, and Daniel Rueckert

A Statistical Model for Smooth Shapes in Kendall Shape Space ........ 628
Akshay V. Gaikwad, Saurabh J. Shigwan, and Suyash P. Awate

A Cross Saliency Approach to Asymmetry-Based Tumor Detection .... 636
Miri Erihov, Sharon Alpert, Pavel Kisilev, and Sharbell Hashoul

Grey Matter Sublayer Thickness Estimation in the Mouse Cerebellum .. 644
Da Ma, Manuel J. Cardoso, Maria A. Zuluaga, Marc Modat, Nick Powell, Frances Wiseman, Victor Tybulewicz, Elizabeth Fisher, Mark F. Lythgoe, and Sébastien Ourselin

Unregistered Multiview Mammogram Analysis with Pre-trained Deep Learning Models ........................................... 652
Gustavo Carneiro, Jacinto Nascimento, and Andrew P. Bradley

Automatic Craniomaxillofacial Landmark Digitization via Segmentation-Guided Partially-Joint Regression Forest Model .............. 661
Jun Zhang, Yaozong Gao, Li Wang, Zhen Tang, James J. Xia, and Dinggang Shen

Automatic Feature Learning for Glaucoma Detection Based on Deep Learning ............................................................ 669
Xiangyu Chen, Yanwu Xu, Shuicheng Yan, Damon Wing Kee Wong, Tien Yin Wong, and Jiang Liu

Fast Automatic Vertebrae Detection and Localization in Pathological CT Scans - A Deep Learning Approach ..................... 678
Amin Suzani, Alexander Seitel, Yuan Liu, Sidney Fels, Robert N. Rohling, and Purang Abolmaesumi

Guided Random Forests for Identification of Key Fetal Anatomy and Image Categorization in Ultrasound Scans ...................... 687
Mohammad Yaqub, Brenda Kelly, A.T. Papageorghiou, and J. Alison Noble
Dempster-Shafer Theory Based Feature Selection with Sparse Constraint for Outcome Prediction in Cancer Therapy
  Chunfeng Lian, Su Ruan, Thierry Denœux, Hua Li, and Pierre Vera

Disjunctive Normal Shape and Appearance Priors with Applications to Image Segmentation
  Fitsum Mesadi, Mujdat Cetin, and Tolga Tasdizen

Positive Delta Detection for Alpha Shape Segmentation of 3D Ultrasound Images of Pathologic Kidneys
  Juan J. Cerrolaza, Christopher Meyer, James Jago, Craig Peters, and Marius George Linguraru

Non-local Atlas-Guided Multi-channel Forest Learning for Human Brain Labeling
  Guangkai Ma, Yaozong Gao, Guorong Wu, Ligang Wu, and Dinggang Shen

Model Criticism for Regression on the Grassmannian
  Yi Hong, Roland Kwitt, and Marc Niethammer

Structural Edge Detection for Cardiovascular Modeling
  Jameson Merkow, Zhuowen Tu, David Kriegman, and Alison Marsden

Sample Size Estimation for Outlier Detection
  Timothy Gebhard, Inga Koerte, and Sylvain Bouix

Multi-scale Heat Kernel Based Volumetric Morphology Signature
  Gang Wang and Yalin Wang

Structural Brain Mapping
  Muhammad Razib, Zhong-Lin Lu, and Wei Zeng
