Complications in Maxillofacial Cosmetic Surgery
Complications in Maxillofacial Cosmetic Surgery

Strategies for Prevention and Management
Having practiced the art of cosmetic surgery exclusively for 20 years, the most challenging and stressful aspect of this specialty absolutely revolves around the prevention and management of complications. Lectures and articles that clearly address complications are always popular because of the deficiency of honest and blunt discussions related to this important topic. I commend the authors for taking on the challenge of writing this very thorough book on complications in maxillofacial cosmetic surgery.

The authors clearly delineate the most common complications seen in facial cosmetic surgery in a very thoughtful and easy-to-follow format. One of the best features of this text is the wonderful diversity and expertise of the authors. By using authors from various specialty training, the reader benefits by reviewing a range of treatment modalities not seen in most texts that limit authorship to an isolated specialty. Plastic and reconstructive surgeons, oral and maxillofacial surgeons, otolaryngologists, dermatologists, and any other surgeons performing cosmetic surgery of the face will want to have this book in their library. Frankly, even doctors who limit their cosmetic work to minimally invasive facial cosmetic procedures will benefit tremendously from this book.

Sections in the text are separated into very clear and practical divisions. The first covers wonderful topics often missed in the average complication text. Fantastic chapters dedicated to medicolegal issues involved with the cosmetic surgery patient along with pain management are just a couple that make this an outstanding resource. Also, the text covers anesthesia issues, infection prevention, and treatment standards, along with an excellent discussion involving current therapy for wound treatment and healing.

Detailed management of specific facial cosmetic surgical complications in the book’s second section is very up-to-date with the newest and most ideal management for each common procedure. The comprehensive coverage of issues is impressive for a single textbook. The text covers complication treatment for facial implants, facelifts, rhinoplasty, orthognathic surgery, skin resurfacing, and nonsurgical injectables, just to name a few. A wonderful variety of authors cover each procedure and the potential complications openly and succinctly. Even with the large variety and number of authors, the organization and uniformity is superb and demonstrates the dedication and time invested by the editors.

It is extremely challenging to write and edit a textbook covering most every conceivable facet of facial cosmetic surgery complications. This book
achieves an incredible amount of both detail and broad coverage of a vast variety of issues when dealing with problems associated with facial cosmetic surgery. It is a breath of fresh air in its honesty and multispecialty review. I highly recommend this text as a must-have for any surgeon from novice to expert who performs facial cosmetic procedures.

Angelo Cuzalina, M.D., D.D.S.

Contents

Part I General Topics

1 History of the Facelift: The First Three Decades ................. 3
   Jane A. Petro

2 Patient Assessment and Evaluation ................................. 13
   Y. Tfaili, A. Faddoul, and C.M. Ayoub

3 Cosmetic Patient Evaluation ......................................... 23
   Tian Ran Zhu, Ali Banki, and Mohammad Banki

4 Wound Healing ........................................................... 37
   Peter W. Hashim and Antoine M. Ferneini

5 Improving Pain Management in Maxillofacial
   Cosmetic Surgical Procedures ......................................... 47
   Marwan S. Rizk, Samar S. Bahjah, and Chakib M. Ayoub

6 Medical Complications Following Maxillofacial Surgery ...... 59
   Henry Ward and Andre Ward

7 Anesthesia Complications: Management and Prevention ...... 73
   Elie M. Ferneini and Jeffrey Bennett

8 Postoperative Infection .................................................. 91
   Scott Kim, Peter Hashim, and Elie M. Ferneini

9 Managing Medicolegal Issues Surrounding
   Esthetic Facial Surgery ................................................ 105
   Christy B. Durant and James R. Hupp

Part II Complications of Specific Procedures

10 Complications of Facial Resurfacing ............................... 125
    Luke L’Heureux, Andrew Sohn, and Elie M. Ferneini

11 Laser Treatment .......................................................... 131
    Prasad S. Sureddi, Virginia Parker, and J. Alexander Palesty

12 Complications in the Cosmetic Use of Botulinum
   Toxin Type A: Prevention and Management ...................... 141
    Whitney Florin and Jacob Haiavy
