We are very pleased to present *The Handbook of Trait Narcissism: Key Advances, Research Methods, and Controversies*. This handbook is the first of its kind, an edited volume devoted to the latest theoretical and empirical developments on individual differences in narcissism in personality and social psychology. Ours, however, is not the first “handbook” dedicated to narcissism; Campbell and Miller (2011) paved the way with one which sought to bridge the clinical and personality-social “divide” providing a much-needed summary of recent work from both academic spheres. Our effort here is somewhat less ambitious but comes at a time in which narcissism research is exploding and theoretical development is happening at a rapid pace. According to PsychINFO, there have been over 1600 peer-reviewed journal articles published on the subject of narcissism since January of 2011, a more than 50% increase from all those published since the Narcissistic Personality Inventory was published in 1979! In order to accommodate as many topics as possible, we have adopted a “brief chapter” approach in which we have asked authors to summarize cutting-edge research and suggest future research directions in less than 3500 words. We believe this also serves the reader as well, as it makes it quicker and easier than ever before to keep abreast of the latest developments. We hope this handbook will serve the seasoned narcissism researcher trying to keep up with this rapidly advancing and fluid field, the novice researcher or student trying to gain a theoretical foothold, as well as the journalist or member of the public who desires an accurate yet accessible depiction of the science of narcissism.

Our editorial duties for this volume have given us a “bird’s eye” view of our field and we have several observations to offer our readers. First, narcissism research has spread to a dramatically wider variety of domains since Campbell and Miller’s (2011) volume. For example, our handbook includes chapters on topics like followership, memory, friendship, envy, religiosity, and bullying—topics that did not appear in the Campbell and Miller’s handbook. Moreover, new and fascinating empirical perspectives on the development of narcissism have appeared in the intervening years, which include advances in our understanding of the impact of parenting, economic conditions, behavioral genetics, and other factors, all of which can be found in the current volume.

Our initial intention was to develop a book that focused exclusively on grandiose narcissism research. However, we quickly realized that the literature on vulnerable narcissism had exploded recently as well and was often so
intimately linked to research on grandiose narcissism that it was impractical, and even misleading, to avoid the topic altogether. As a result, a substantial portion of the handbook addresses developments in the literatures on both grandiose and vulnerable narcissism. For example, we have four chapters entirely devoted to making key empirical and theoretical distinctions between the two constructs, and a great many chapters address vulnerable narcissism as a substantial subtopic. Questions remain, however, regarding which core traits vulnerable and grandiose narcissism share and how to best conceptualize these distinct (i.e., weakly correlated) personality traits. Moreover, the conceptual and empirical relation between grandiose narcissism, vulnerable narcissism, and the more clinically oriented constructs of pathological narcissism and narcissistic personality disorder remain underdeveloped. Nevertheless, we think readers of this volume will come away with a more nuanced understanding of narcissism and its many varieties.

A good deal of recent research has also made it very clear that individual differences in grandiosity and self-inflation can take many forms. For example, recent work on communal and collective narcissism has made a compelling case that trait self-aggrandizement can be based on prosocial traits (“I am the most charitable person!”) and also be held on behalf of one’s social group (“We are the best country on Earth!”). These developments have clearly arisen, at least in part, because there is still ample room in the field for psychometric and theoretical innovation. On the other hand, we still lack consensus on how to best measure many of our core constructs and those that are relevant, albeit distinct, from narcissism. The good news is that new and theoretically driven measures are emerging, which serve as useful tools as we seek to advance our knowledge in a more concerted and cumulative fashion.

As we present this work to you, we are filled with gratitude for the excellent contributions of all our authors and to be a part of an intellectually exciting field that is more relevant than ever. The three of us approached this daunting project with a combined sense of excitement and more than a little anxiety. Our anxieties were quickly replaced with feelings of appreciation and indebtedness, however, when we began to receive drafts of the individual chapters. They were overwhelmingly punctual and well-written and required modest levels of editing on our parts. We are so thankful to the contributors, who so clearly put significant effort into their chapters, and did so almost entirely as an act of collegiality. Who knew that narcissism researchers could be so selfless? More specifically, we are thankful for collegial support and advice from W. Keith Campbell and the encouragement and assistance of Morgan Ryan at Springer, without which this book would have never made it off the ground.

About the Editors

Anthony D. Hermann is a Professor of Psychology at Bradley University in Peoria, IL. Professor Hermann received his Ph.D. in Social Psychology at The Ohio State University and has also held faculty positions at Kalamazoo College and Willamette University. He has published papers on the intersection of self-evaluation and social behavior for over 20 years. His current research focuses on better understanding the motivations that underlie grandiose narcissists' spiritual, cognitive, and interpersonal behavior. He has received national recognition for his commitment to mentoring undergraduate research and relishes any opportunity has to bask in the reflected glory of his current and former students.

Amy B. Brunell is an Associate Professor at The Ohio State University, Mansfield. She received her M.A. in Psychology from the College of William and Mary and her Ph.D. from the University of Georgia in 2007. She teaches courses in social psychology, personality, the self, and interpersonal relationships. Her research concerns the role of narcissism in social contexts, such as emergent leadership, decision making, academic cheating, as well as romantic relationship behaviors. She has published papers in academic journals such as *Personality and Social Psychology Bulletin*, *Journal of Experimental Social Psychology*, and the *Journal of Research in Personality*. She serves on the editorial board of *Assessment*. She prides herself in conducting and evaluating research with her undergraduate students to help them prepare for graduate school and beyond.

Joshua D. Foster a Washington, D.C. native, earned his Ph.D. in Social Psychology from the University of Georgia in 2005. Since then, he has been a member of the Behavior and Brain Sciences faculty (Psychology Department) at the University of South Alabama where he was awarded tenure in 2011 and promoted to rank of Full Professor in 2017. Dr. Foster’s principal areas of research are personality and individual differences, psychometrics, and latent variable modeling. He has published more than 50 papers that have been cited more than 6000 times in the literature. His work has also been featured in a variety of newspapers and magazines, including the *New York Times*, the *Boston Globe*, the *Wall Street Journal*, and the *Huffington Post*. Dr. Foster has mentored numerous students in his laboratory who have gone on to graduate programs, including University of Alabama at Tuscaloosa, University of Alabama at Birmingham, Columbia University, Colorado State
University, University of Florida, University of Georgia, University of North Carolina at Chapel Hill, and Penn State University. When not working, he enjoys watching television, playing video games, thinking about exercising, and hanging out with his family. His wife, Dr. M. Hope Jackson, is a practicing clinical psychologist who specializes in treating anxiety, mood, and eating disorders. Together, they have two boys, Mathew and Colin, who specialize in being silly.
