Applications of Evolutionary Computing

EvoWorkshops 2004: EvoBIO, EvoCOMNET, EvoHOT, EvoIASP, EvoMUSART, and EvoSTOC
Coimbra, Portugal, April 5-7, 2004
Proceedings
Evolutionary Computation (EC) deals with problem solving, optimization, and machine learning techniques inspired by principles of natural evolution and genetics. Just from this basic definition, it is clear that one of the main features of the research community involved in the study of its theory and in its applications is multidisciplinarity. For this reason, EC has been able to draw the attention of an ever-increasing number of researchers and practitioners in several fields.

In its 6-year-long activity, EvoNet, the European Network of Excellence in Evolutionary Computing, has been the natural reference and incubator for that multifaceted community. EvoNet has provided logistic and material support for those who were already involved in EC but, in the first place, it has had a critical role in favoring the significant growth of the EC community and its interactions with longer-established ones. The main instrument that has made this possible has been the series of events, first organized in 1998, that have spanned over both theoretical and practical aspects of EC.

Ever since 1999, the present format, in which the EvoWorkshops, a collection of workshops on the most application-oriented aspects of EC, act as satellites of a core event, has proven to be very successful and very representative of the multi-disciplinarity of EC. Up to 2003, the core was represented by EuroGP, the main European event dedicated to Genetic Programming. EuroGP has been joined as the main event in 2004 by EvoCOP, formerly part of EvoWorkshops, which has become the European Conference on Evolutionary Computation in Combinatorial Optimization.

EvoWorkshops 2004, of which this volume contains the proceedings, was held in Coimbra, Portugal, on April 5–7, 2004, jointly with the seventh edition of EuroGP and the fourth edition of EvoCOP. EvoWorkshops 2004 consisted of the following individual workshops:

- *EvoBIO*, the 2nd European Workshop on Evolutionary Bioinformatics;
- *EvoCOMNET*, the 1st European Workshop on Evolutionary Computation in Communications, Networks, and Connected Systems;
- *EvoHOT*, the 1st European Workshop on Hardware Optimization Techniques;
- *EvoIASP*, the 6th European Workshop on Evolutionary Computation in Image Analysis and Signal Processing;
- *EvoMUSART*, the 2nd European Workshop on Evolutionary Music and Art; and
EvoBIO was concerned with the exploitation of evolutionary computation and advanced hybrids of evolutionary computation with other techniques in addressing the very wide range of problems that occur in the analysis and understanding of biological data. In this area, evolutionary computation is playing an increasingly important role in pharmaceutical, biotechnology, and associated industries, as well as in scientific discovery.

EvoCOMNET, the 1st European Workshop on Evolutionary Computation in Communications, Networks, and Connected Systems, addressed the application of evolutionary computation techniques to problems in communication, networks, and connected systems. New communication technologies, faster networks, new types of interpersonal and interorganizational communication as well as the integration and interconnection of production centers and industries have a great impact on the structure of companies and business processes and are the driving forces on our road towards a connected, networked society. EvoCOMNET is a platform for the dissemination of the research and application of EC techniques in facing these new challenges through designing and building more efficient communication systems, networks, and connected systems. The papers presented at the workshop illustrated both the continuing success of EC and the potential of more recent developments to solve real-world problems.

EvoHOT highlighted the latest developments in the field of EC applications to hardware optimization. The works presented show how problems can be examined with complementary approaches, starting from their particular practical aspects or from the evolutionary computation theory. The different subjects tackled cover a broad spectrum. They include classical problems, such as minimization of disjoint sums-of-products based on binary decision diagrams and the multilayer floorplan layout problem, together with some very specific problems, like the implementations of median circuits when limited resources are available, the optimization of mask and illumination geometries, and the optimization of a manipulator trajectory. The behavior of evolutionary techniques on such problems was carefully analyzed, showing the effect of multiobjective optimization and how specific problems can be evaluated and characterized.

EvoIASP, the first European event specifically dedicated to the applications of evolutionary computation to image analysis and signal processing, has been a traditional appointment since 1999. This year it addressed topics ranging from optimization of low-level image and signal processing techniques to complex object-recognition systems and analysis of financial time series, which reflects the breadth of the possible applications in the fields covered by the workshop.

The second edition of EvoMUSART focused on the use of evolutionary computation techniques for the development of creative systems. There is a growing interest in the application of these techniques in fields such as art, music, architecture, and design. The goal of EvoMUSART was to bring together researchers who use evolutionary computation in this context, providing the opportunity to promote, present, and discuss the latest work in the area, fostering its further developments and collaboration among researchers.
The topic of EvoSTOC was the application of evolutionary algorithms in stochastic environments. This included optimization problems changing over time, the treatment of noise, and the search for robust solutions. These topics recently gained increasing attention in the evolutionary computing community, and EvoSTOC was the first workshop to provide a platform to present and discuss the latest research in the field.

EvoWorkshops 2004 has confirmed its tradition in providing researchers in these fields, as well as people from industry, students, and interested newcomers, with an opportunity to present new results, discuss current developments and applications, or just get acquainted with the world of EC, besides fostering closer future interaction between members of all scientific communities that may benefit from EC techniques.

EvoWorkshops 2004 had the highest number of submissions ever, even after EvoCOP, which had been by far the largest of the EvoWorkshops in the previous years, became an independent conference. The acceptance rates are an indicator of the high quality of the papers presented at the workshops and included in these proceedings.

We would like to give credit to all members of the program committees, to whom we are very grateful for their quick and thorough work. EvoWorkshops 2004 was sponsored, for the last time, by EvoNet, whose activity as an EU-funded project has come to an end with the organization of this year’s events. However, the figures reported above show that EvoWorkshops, as well as the main conferences with which it is jointly organized, has reached a degree of maturity and scientific prestige that will allow the activity promoted by EvoNet in the past six years to go on, and possibly further expand, in the years to come. The organization of the event was made possible thanks to the active participation of many members of the EvoNet working groups, but especially to the invaluable restless work of Jennifer Willies, EvoNet’s administrator.

April 2004

EvoWorkshops 2004 was organized by EvoNet jointly with EuroGP 2004 and EvoCOP 2004.

Organizing Committee

EvoWorkshops Co-chairs: Günther R. Raidl, Vienna University of Technology, Austria
Stefano Cagnoni, University of Parma, Italy
Local Chair: Ernesto Costa, University of Coimbra, Portugal

EvoBIO Co-chairs: David Corne, University of Exeter, UK
Elena Marchiori, Free University Amsterdam, The Netherlands

EvoCOMNET Co-chairs: Franz Rothlauf, University of Mannheim, Germany
George D. Smith, University of East Anglia, UK

EvoHOT Co-chairs: Giovanni Squillero, Politecnico di Torino, Italy
Rolf Drechsler, University of Bremen, Germany

EvoIASP Chair: Stefano Cagnoni, University of Parma, Italy

EvoMUSART Co-chairs: Colin G. Johnson, University of Kent, UK
Penousal Machado, University of Coimbra, Portugal

EvoSTOC Co-chairs: Jürgen Branke, University of Karlsruhe, Germany
Yaochu Jin, Honda Research Institute Europe, Germany

Program Committees

EvoBIO Program Committee
Jesus S. Aguilar-Ruiz, University of Seville, Spain
Wolfgang Banzhaf, University of Dortmund, Germany
Jacek Blazewicz, Institute of Computing Science, Poznan, Poland
Carlos Cotta-Porras, University of Malaga, Spain
Bogdan Filipic, Jozef Stefan Institute, Ljubljana, Slovenia
David Fogel, Natural Selection, Inc., USA
Gary B. Fogel, Natural Selection, Inc., USA
James Foster, University of Idaho, USA
Steven A. Frank, University of California, Irvine, USA
Jin-Kao Hao, LERIA, Université d’Angers, France
William Hart, Sandia National Labs, USA
Jaap Heringa, Free University Amsterdam, The Netherlands
Francisco Herrera, University of Granada, Spain
Daniel Howard, QinetiQ, UK
Kees Jong, Free University Amsterdam, The Netherlands
Antoine van Kampen, AMC University of Amsterdam, The Netherlands
Douglas B. Kell, University of Wales, Aberystwyth, UK
William B. Langdon, UCL, UK
Bob MacCallum, Stockholm University, Sweden
Brian Mayoh, Aarhus University, Denmark
Andrew C.R. Martin, University of Reading, UK
Peter Merz, Eberhard-Karls-Universität, Tübingen, Germany
Martin Middendorf, Leipzig University, Germany
Jason H. Moore, Vanderbilt University Medical Center, USA
Pablo Moscato, University of Newcastle, Australia
Martin Oates, British Telecom Plc., UK
Jon Rowe, University of Birmingham, UK
Jem Rowland, University of Wales, Aberystwyth, UK
Vic J. Rayward-Smith, University of East Anglia, UK
El-ghazali Talbi, Laboratoire d’Informatique Fondamentale de Lille, France
Eckart Zitzler, Swiss Federal Institute of Technology, Switzerland

EvoCOMNET Program Committee
Stuart Allen, Cardiff University, UK
Dave Corne, University of Exeter, UK
Bryant Julstrom, St. Cloud State University, USA
Joshua Knowles, Université Libre de Bruxelles, Belgium
Geoff McKeown, UEA Norwich, UK
Martin Oates, University of Reading, UK
Günther R. Raidl, Vienna University of Technology, Austria
Giovanni Squillero, Politecnico di Torino, Italy
Andrew Tuson, City University, London, UK

Lars Willmes, NuTech Solutions, Germany

Sponsoring Institutions

– EvoNet, the Network of Excellence in Evolutionary Computing
– University of Coimbra, Coimbra, Portugal
# Table of Contents

## EvoBIO Contributions

A Memetic Algorithm for Protein Structure Prediction in a 3D-Lattice HP Model .......................... 1  
  Andrea Bazzoli, Andrea G.B. Tettamanzi

An Improved Genetic Algorithm for the Sequencing by Hybridization Problem .......................... 11  
  Carlos A. Brizuela, Luis C. González, Heidi J. Romero

Evolutionary Search of Thresholds for Robust Feature Set Selection: Application to the Analysis of Microarray Data ................. 21  
  Carlos Cotta, Christian Sloper, Pablo Moscato

Evolving Regular Expression-Based Sequence Classifiers for Protein Nuclear Localisation .................. 31  
  Amine Heddad, Markus Brameier, Robert M. MacCallum

Analysis of Proteomic Pattern Data for Cancer Detection .................. 41  
  Kees Jong, Elena Marchiori, Aad van der Vaart

Self-Adaptive Scouting—Autonomous Experimentation for Systems Biology .......................... 52  
  Naoki Matsumaru, Florian Centler, Klaus-Peter Zauner, Peter Dittrich

An Improved Grammatical Evolution Strategy for Hierarchical Petri Net Modeling of Complex Genetic Systems .................. 63  
  Jason H. Moore, Lance W. Hahn

Two-Step Genetic Programming for Optimization of RNA Common-Structure .................. 73  
  Jin-Wu Nam, Je-Gun Joung, Y.S. Ahn, Byoung-Tak Zhang

Evolutionary Algorithms for Optimal Control in Fed-Batch Fermentation Processes .................. 84  
  Miguel Rocha, José Neves, Isabel Rocha, Eugénio C. Ferreira

Discrete Branch Length Representations for Genetic Algorithms in Phylogenetic Search .................. 94  
  Jian Shen, Robert B. Heckendorn
Iteratively Inferring Gene Regulatory Networks with Virtual Knockout Experiments ........................................... 104
Christian Spieth, Felix Streichert, Nora Speer, Andreas Zell

Multiple Sequence Alignment Using SAGA: Investigating the Effects of Operator Scheduling, Population Seeding, and Crossover Operators ........................................... 113
René Thomsen, Wouter Boomsma

Constructing Microbial Consortia with Minimal Growth Using a Genetic Algorithm ........................................... 123
Frederik P.J. Vandecasteele, Thomas F. Hess, Ronald L. Crawford

EvoCOMNET Contributions

2-Objective Optimization of Cells Overlap and Geometry with Evolutionary Algorithms ........................................... 130
Adel Jedidi, Alexandre Caminada, Gerd Finke

A Genetic Algorithm for Telecommunication Network Design ............ 140
Silvana Livramento, Arnaldo V. Moura, Flávio K. Miyazawa, Mário M. Harada, Rogério A. Miranda

A GA/Heuristic Hybrid Technique for Routing and Wavelength Assignment in WDM Networks ............ 150
A. Cagatay Talay, Sema Oktug

Ant Colony Optimization for the Maximum Edge-Disjoint Paths Problem ........................................... 160
Maria Blesa, Christian Blum

Using Genetic Programming to Design Broadcasting Algorithms for Manhattan Street Networks ........................................... 170
Francesc Comellas, Cristina Dalfó

A Scenario-Based Approach to Protocol Design Using Evolutionary Techniques ........................................... 178
Sérgio G. Araújo, António C. Mesquita, Aloysio C.P. Pedroza

EvoHOT Contributions

A Slicing Structure Representation for the Multi-layer Floorplan Layout Problem ........................................... 188
Johan Berntsson, Maolin Tang

Disjoint Sum of Product Minimization by Evolutionary Algorithms ............ 198
Nicole Drechsler, Mario Hilgemeier, Görschwin Fey, Rolf Drechsler
