Preface

Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems.

The area of application includes natural systems – such as biology, environmental and geo-sciences, physics, and chemistry – and synthetic systems such as electronics and financial and economic systems. The discipline is a bridge between ‘classical’ computer science – logic, complexity, architecture, algorithms – mathematics, and the use of computers in the aforementioned areas.

The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines, which can be tackled by advances made in this field. For instance new models and methods to study environmental issues like the quality of air, water, and soil, and weather and climate predictions through simulations, as well as the simulation-supported development of cars, airplanes, and medical and transport systems etc.

Paraphrasing R. Kenway (R.D. Kenway, Contemporary Physics. 1994): ‘There is an important message to scientists, politicians, and industrialists: in the future science, the best industrial design and manufacture, the greatest medical progress, and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science’.

Nowadays we have access to high-end computer architectures and a large range of computing environments, mainly as a consequence of the enormous stimulus from the various international programs on advanced computing, e.g. HPCC (USA), HPCN (Europe), Real-World Computing (Japan), and ASCI (USA: Advanced Strategic Computing Initiative). The sequel to this, known as ‘grid-systems’ and ‘grid-computing’, will boost the computer, processing, and storage power even further. Today’s supercomputing application may be tomorrow’s desktop computing application.

The societal and industrial pulls have given a significant impulse to the rewriting of existing models and software. This has resulted among other things in a big ‘clean-up’ of often outdated software and new programming paradigms and verification techniques. With this make-up of arrears the road is paved for the study of real complex systems through computer simulations, and large scale problems that have long been intractable can now be tackled. However, the development of complexity reducing algorithms, numerical algorithms for large data sets, formal methods and associated modeling, as well as representation (i.e. visualization) techniques are still in their infancy. Deep understanding of the approaches required to model and simulate problems with increasing complexity and to efficiently exploit high performance computational techniques is still a big scientific challenge.
The International Conference on Computational Science (ICCS) series of conferences was started in May 2001 in San Francisco. The success of that meeting motivated the organization of the meeting held in Amsterdam from April 21–24, 2002.

These three volumes (Lecture Notes in Computer Science volumes 2329, 2330, and 2321) contain the proceedings of the ICCS 2002 meeting. The volumes consist of over 350 – peer reviewed – contributed and invited papers presented at the conference in the Science and Technology Center Watergraafsmeer (WTCW), in Amsterdam. The papers presented reflect the aims of the program committee to bring together major role players in the emerging field of computational science.

The conference was organized by The University of Amsterdam, Section Computational Science (http://www.science.uva.nl/research/scs/), SHARCNET, Canada (http://www.sharcnet.com), and the Innovative Computing Laboratory at The University of Tennessee.

The conference included 22 workshops, 7 keynote addresses, and over 350 contributed papers selected for oral presentation. Each paper was refereed by at least two referees.

We are deeply indebted to the members of the program committee, the workshop organizers, and all those in the community who helped us to organize a successful conference. Special thanks go to Alexander Bogdanov, Jerzy Wasniewski, and Marian Bubak for their help in the final phases of the review process. The invaluable administrative support of Manfred Stienstra, Alain Dankers, and Erik Hitipeuw is also acknowledged. Lodewijk Bos and his team were responsible for the local logistics and as always did a great job.

ICCS 2002 would not have been possible without the support of our sponsors: The University of Amsterdam, The Netherlands; Power Computing and Communication BV, The Netherlands; Elsevier Science Publishers, The Netherlands; Springer-Verlag, Germany; HPCN Foundation, The Netherlands; National Supercomputer Facilities (NCF), The Netherlands; Sun Microsystems, Inc., USA; SHARCNET, Canada; The Department of Computer Science, University of Calgary, Canada; and The School of Computer Science, The Queens University, Belfast, UK.

Amsterdam, April 2002

Peter M.A. Sloot, Scientific Chair 2002, on behalf of the co-editors:
C.J. Kenneth Tan
Jack J. Dongarra
Alfons G. Hoekstra
The 2002 International Conference on Computational Science was organized jointly by The University of Amsterdam, Section Computational Science, SHARCNET, Canada, and the University of Tennessee, Department of Computer Science.

Conference Chairs

Peter M.A. Sloot, Scientific and Overall Chair ICCS 2002 (University of Amsterdam, The Netherlands)
C.J. Kenneth Tan (SHARCNET, Canada)
Jack J. Dongarra (University of Tennessee, Knoxville, USA)

Workshops Organizing Chair

Alfons G. Hoekstra (University of Amsterdam, The Netherlands)

International Steering Committee

Vassil N. Alexandrov (University of Reading, UK)
J. A. Rod Blais (University of Calgary, Canada)
Alexander V. Bogdanov (Institute for High Performance Computing and Data Bases, Russia)
Marian Bubak (AGH, Poland)
Geoffrey Fox (Florida State University, USA)
Marina L. Gavrilova (University of Calgary, Canada)
Bob Hertzberger (University of Amsterdam, The Netherlands)
Anthony Hey (University of Southampton, UK)
Benjoe A. Juliano (California State University at Chico, USA)
James S. Pascoe (University of Reading, UK)
Rene S. Renner (California State University at Chico, USA)
Kokichi Sugihara (University of Tokyo, Japan)
Jerzy Wasniewski (Danish Computing Center for Research and Education, Denmark)
Albert Zomaya (University of Western Australia, Australia)
Local Organizing Committee

Alfons Hoekstra (University of Amsterdam, The Netherlands)
Alexander V. Bogdanov (Institute for High Performance Computing and Data Bases, Russia)
Marian Bubak (AGH, Poland)
Jerzy Wasniewski (Danish Computing Center for Research and Education, Denmark)

Local Advisory Committee

Patrick Aerts (National Computing Facilities (NCF), The Netherlands Organization for Scientific Research (NWO), The Netherlands
Jos Engelen (NIKHEF, The Netherlands)
Daan Frenkel (Amolf, The Netherlands)
Walter Hoogland (University of Amsterdam, The Netherlands)
Anwar Osseyran (SARA, The Netherlands)
Rik Maes (Faculty of Economics, University of Amsterdam, The Netherlands)
Gerard van Oortmerssen (CWI, The Netherlands)

Program Committee

Vassil N. Alexandrov (University of Reading, UK)
Hamid Arabnia (University of Georgia, USA)
J. A. Rod Blais (University of Calgary, Canada)
Alexander V. Bogdanov (Institute for High Performance Computing and Data Bases, Russia)
Marian Bubak (AGH, Poland)
Toni Cortes (University of Catalonia, Barcelona, Spain)
Brian J. d’Auriol (University of Texas at El Paso, USA)
Clint Dawson (University of Texas at Austin, USA)
Geoffrey Fox (Florida State University, USA)
Marina L. Gavrilova (University of Calgary, Canada)
James Glimm (SUNY Stony Brook, USA)
Paul Gray (University of Northern Iowa, USA)
Piet Hemker (CWI, The Netherlands)
Bob Hertzberger (University of Amsterdam, The Netherlands)
Chris Johnson (University of Utah, USA)
Dieter Kranzlmüller (Johannes Kepler University of Linz, Austria)
Antonio Lagana (University of Perugia, Italy)
Michael Mascagni (Florida State University, USA)
Jiri Nedoma (Academy of Sciences of the Czech Republic, Czech Republic)
Roman Neruda (Academy of Sciences of the Czech Republic, Czech Republic)
Jose M. Laginha M. Palma (University of Porto, Portugal)
James Pascoe (University of Reading, UK)
Ron Perrott (The Queen’s University of Belfast, UK)
Andy Pimentel (The University of Amsterdam, The Netherlands)
William R. Pulleyblank (IBM T. J. Watson Research Center, USA)
Rene S. Renner (California State University at Chico, USA)
Laura A. Salter (University of New Mexico, USA)
Dale Shires (Army Research Laboratory, USA)
Vaidy Sunderam (Emory University, USA)
Jesus Vigo-Aguiar (University of Salamanca, Spain)
Koichi Wada (University of Tsukuba, Japan)
Jerzy Wasniewski (Danish Computing Center for Research and Education, Denmark)
Roy Williams (California Institute of Technology, USA)
Elena Zudilova (Corning Scientific, Russia)

Workshop Organizers

Computer Graphics and Geometric Modeling
   Andres Iglesias (University of Cantabria, Spain)

Modern Numerical Algorithms
   Jerzy Wasniewski (Danish Computing Center for Research and Education, Denmark)

Network Support and Services for Computational Grids
   C. Pham (University of Lyon, France)
   N. Rao (Oak Ridge National Labs, USA)

Stochastic Computation: From Parallel Random Number Generators to Monte Carlo Simulation and Applications
   Vasil Alexandrov (University of Reading, UK)
   Michael Mascagni (Florida State University, USA)

Global and Collaborative Computing
   James Pascoe (The University of Reading, UK)
   Peter Kacsuk (MTA SZTAKI, Hungary)
   Vassil Alexandrov (The University of Reading, UK)
   Vaidy Sunderam (Emory University, USA)
   Roger Loader (The University of Reading, UK)

Climate Systems Modeling
   J. Taylor (Argonne National Laboratory, USA)

Parallel Computational Mechanics for Complex Systems
   Mark Cross (University of Greenwich, UK)

Tools for Program Development and Analysis
   Dieter Kranzlmüller (Joh. Kepler University of Linz, Austria)
   Jens Volkert (Joh. Kepler University of Linz, Austria)

3G Medicine
   Andy Marsh (VMW Solutions Ltd, UK)
   Andreas Lymberis (European Commission, Belgium)
   Ad Emmen (Genias Benelux bv, The Netherlands)
Automatic Differentiation and Applications  
H. Martin Buecker (Aachen University of Technology, Germany)  
Christian H. Bischof (Aachen University of Technology, Germany)

Computational Geometry and Applications  
Marina Gavrilova (University of Calgary, Canada)

Computing in Medicine  
Hans Reiber (Leiden University Medical Center, The Netherlands)  
Rosemary Renaut (Arizona State University, USA)

High Performance Computing in Particle Accelerator Science and Technology  
Andreas Adelmann (Paul Scherrer Institute, Switzerland)  
Robert D. Ryne (Lawrence Berkeley National Laboratory, USA)

Geometric Numerical Algorithms: Theoretical Aspects and Applications  
Nicoletta Del Buono (University of Bari, Italy)  
Tiziano Politi (Politecnico-Bari, Italy)

Soft Computing: Systems and Applications  
Renee Renner (California State University, USA)

PDE Software  
Hans Petter Langtangen (University of Oslo, Norway)  
Christoph Pflaum (University of Würzburg, Germany)  
Ulrich Ruede (University of Erlangen-Nürnberg, Germany)  
Stefan Turek (University of Dortmund, Germany)

Numerical Models in Geomechanics  
R. Blaheta (Academy of Science, Czech Republic)  
J. Nedoma (Academy of Science, Czech Republic)

Education in Computational Sciences  
Rosie Renaut (Arizona State University, USA)

Computational Chemistry and Molecular Dynamics  
Antonio Lagana (University of Perugia, Italy)

Geocomputation and Evolutionary Computation  
Yong Xue (CAS, UK)  
Narayana Jayaram (University of North London, UK)

Modeling and Simulation in Supercomputing and Telecommunications  
Youngsong Mun (Korea)

Determinism, Randomness, Irreversibility, and Predictability  
Guenri E. Norman (Russian Academy of Sciences, Russia)  
Alexander V. Bogdanov (Institute of High Performance Computing and Information Systems, Russia)  
Harald A. Pasch (University of Vienna, Austria)  
Konstantin Korotenko (Shirshov Institute of Oceanology, Russia)
Sponsoring Organizations

The University of Amsterdam, The Netherlands
Power Computing and Communication BV, The Netherlands
Elsevier Science Publishers, The Netherlands
Springer-Verlag, Germany
HPCN Foundation, The Netherlands
National Supercomputer Facilities (NCF), The Netherlands
Sun Microsystems, Inc., USA
SHARCNET, Canada
Department of Computer Science, University of Calgary, Canada
School of Computer Science, The Queens University, Belfast, UK.

Local Organization and Logistics

Lodewijk Bos, MC-Consultancy
Jeanine Mulders, Registration Office, LGCE
Alain Dankers, University of Amsterdam
Manfred Stienstra, University of Amsterdam
Table of Contents, Part I

Keynote Papers

The UK e-Science Core Program and the Grid .......................... 3
T. Hey, A.E. Trefethen

Community Grids .......................................................... 22
G. Fox, O. Balsoy, S. Pallickara, A. Uyar, D. Gannon, A. Slominski

Conference Papers

Computer Science – Information Retrieval

A Conceptual Model for Surveillance Video Content and Event-Based
Indexing and Retrieval .................................................... 41
F. Marir, K. Zerzour, K. Ouazzane, Y. Xue

Comparison of Overlap Detection Techniques ......................... 51
K. Monostori, R. Finkel, A. Zaslavsky, G. Hodász, M. Pataki

Using a Passage Retrieval System to Support Question Answering
Process ................................................................. 61
F. Llopis, J.L. Vicedo, A. Ferrández

XML Design Patterns Used in the EnterTheGrid Portal ............ 70
A. Emmen

Modeling Metadata-Enabled Information Retrieval .................. 78
M.J. Fernández-Iglesias, J.S. Rodríguez, L. Anido, J. Santos,
M. Caeiro, M. Llamas

Complex Systems Applications 1

Spontaneous Branching in a Polyp Oriented Model of Stony Coral
Growth ................................................................. 88
R. Merks, A. Hoekstra, J. Kaandorp, P. Sloot

Local Minimization Paradigm in Numerical Modeling of
Foraminiferal Shells .................................................... 97
P. Topa, J. Tyszka
## Using PDES to Simulate Individual-Oriented Models in Ecology: A Case Study
R. Suppi, P. Munt, E. Luque

## In Silico Modeling of the Human Intestinal Microflora
D.J. Kamerman, M.H.F. Wilkinson

## A Mesoscopic Approach to Modeling Immunological Memory
Y. Liu, H.J. Ruskin

### Computer Science – Computer Systems Models

A New Method for Ordering Binary States Probabilities in Reliability and Risk Analysis
L. González

Reliability Evaluation Using Monte Carlo Simulation and Support Vector Machine
C.M. Rocco Sanseverino, J.A. Moreno

On Models for Time-Sensitive Interactive Computing
M. Meriste, L. Motus

Induction of Decision Multi-trees Using Levin Search
C. Ferri-Ramírez, J. Hernández-Orallo, M.J. Ramírez-Quintana

A Versatile Simulation Model for Hierarchical Treecodes
P.F. Spinnato, G.D. van Albada, P.M.A. Sloot

### Scientific Computing – Stochastic Algorithms

Computational Processes in Iterative Stochastic Control Design
I.V. Semoushin, O.Yu. Gorokhov

An Efficient Approach to Deal with the Curse of Dimensionality in Sensitivity Analysis Computations
M. Ratto, A. Saltelli

Birge and Qi Method for Three-Stage Stochastic Programs Using IPM
G.Ch. Pflug, L. Halada

Multivariate Stochastic Models of Metocean Fields: Computational Aspects and Applications
A.V. Boukhanovsky

Computational Geometry and Applications

Recent Developments in Motion Planning .......................... 3
  M.H. Overmars

Extreme Distances in Multicolored Point Sets .................... 14
  A. Dumitrescu, S. Guha

Balanced Partition of Minimum Spanning Trees .................... 26
  M. Andersson, J. Gudmundsson, C. Levcopoulos, G. Narasimhan

On the Quality of Partitions Based on Space-Filling Curves .... 36
  J. Hungershöfer, J.-M. Wierum

The Largest Empty Annulus Problem ............................... 46

Mapping Graphs on the Sphere to the Finite Plane ............... 55
  H. Bekker, K. De Raedt

Improved Optimal Weighted Links Algorithms ..................... 65
  O. Daescu

A Linear Time Heuristics for Trapezoidation of GIS Polygons .... 75
  G.P. Lorenzetto, A. Datta

The Morphology of Building Structures .......................... 85
  P. Huybers

Voronoi and Radical Tessellations of Packings of Spheres ......... 95
  A. Gervois, L. Oger, P. Richard, J.P. Troadec

Collision Detection Optimization in a Multi-particle System .... 105
  M.L. Gavrilova, J. Rokne

Optimization Techniques in an Event-Driven Simulation of a Shaker
Ball Mill ............................................................... 115
  M.L. Gavrilova, J. Rokne, D. Gavrilov, O. Vinogradov

Modified DAG Location for Delaunay Triangulation ............... 125
  I. Kolingerová
TIN Meets CAD – Extending the TIN Concept in GIS .................. 135
   R.O.C. Tse, C. Gold

Extracting Meaningful Slopes from Terrain Contours ............... 144
   M. Dakowicz, C. Gold

Duality in Disk Induced Flows ........................................... 154
   J. Giesen, M. John

Improvement of Digital Terrain Model Interpolation Using SFS
   Techniques with Single Satellite Imagery .......................... 164
   M.A. Rajabi, J.A.R. Blais

Implementing an Augmented Scene Delivery System .................. 174
   J.E. Mower

Inspection Strategies for Complex Curved Surfaces Using CMM ....... 184
   R. Wirza, M.S. Bloor, J. Fisher

The Free Form Deformation of Phytoplankton Models ............... 194
   A. Lyakh

**Computing in Medicine**

Curvature Based Registration with Applications to MR-Mammography ... 202
   B. Fischer, J. Modersitzki

Full Scale Nonlinear Electromagnetic Inversion for Biological
   Objects ........................................................................... 207
   A. Abubakar, P.M. van den Berg

Propagation of Excitation Waves and Their Mutual Interactions in
   the Surface Layer of the Ball with Fast Accessory Paths and the
   Pacemaker ..................................................................... 217
   J. Kroc

Computing Optimal Trajectories for Medical Treatment Planning and
   Optimization ................................................................. 227
   O. Daescu, A. Bhatia

CAD Recognition Using Three Mathematical Models .................. 234
   J. Martyniak, K. Stanisz-Wallis, L. Walczycka

3D Quantification Visualization of Vascular Structures in
   Magnetic Resonance Angiographic Images ............................ 242
   J.A. Schaap, P.J.H. de Koning, J.P. Janssen,
   J.J.M. Westenberg, R.J. van der Geest, J.H.C. Reiber
Quantitative Methods for Comparisons between Velocity Encoded MR-Measurements and Finite Element Modeling in Phantom Models 255  
F.M.A. Box, M.C.M. Rutten, M.A. van Buchem, J. Doornbos,  
R.J. van der Geest, P.J.H. de Koning, J.A. Schaap, F.N. van de Vosse,  
J.H.C. Reiber

High Performance Distributed Simulation for Interactive Simulated Vascular Reconstruction 265  
R.G. Belleman, R. Shulakov

Fluid-Structure Interaction Modelling of Left Ventricular Filling 275  
P.R. Verdonck, J.A. Vierendeels

Motion Decoupling and Registration for 3D Magnetic Resonance Myocardial Perfusion Imaging 285  
N. Ablitt, J. Gao, P. Gatehouse, G.-Z. Yang

High Performance Computing in Particle Accelerator Science and Technology

A Comparison of Factorization-Free Eigensolvers with Application to Cavity Resonators 295  
P. Arbenz

Direct Axisymmetric Vlasov Simulations of Space Charge Dominated Beams 305  
F. Filbet, J.-L. Lemaire, E. Sonnendrücker

Fast Poisson Solver for Space Charge Dominated Beam Simulation Based on the Template Potential Technique 315  
L.G. Vorobiev, R.C. York

Parallel Algorithms for Collective Processes in High Intensity Rings 325  
A. Shishlo, J. Holmes, V. Danilov

VORPAL as a Tool for the Study of Laser Pulse Propagation in LWFA 334  
C. Nieter, J.R. Cary

OSIRIS: A Three-Dimensional, Fully Relativistic Particle in Cell Code for Modeling Plasma Based Accelerators 342  
W.B. Mori, S. Deng, S. Lee, T. Katsouleas, J.C. Adam

Interactive Visualization of Particle Beams for Accelerator Design 352  
B. Wilson, K.-L. Ma, J. Qiang, R. Ryne

Generic Large Scale 3D Visualization of Accelerators and Beam Lines 362  
A. Adelmann, D. Feichtinger
Tracking Particles in Accelerator Optics with Crystal Elements ............. 372
  V. Biryukov, A. Drees, R.P. Fliller, N. Malitsky, D. Trbojevic

Precision Dynamic Aperture Tracking in Rings .......................... 381
  F. Méot

Numerical Simulation of Hydro- and Magnetohydrodynamic Processes
in the Muon Collider Target ........................................... 391
  R. Samulyak

Superconducting RF Accelerating Cavity Developments ...................... 401
  E. Zaplatin

CEA Saclay Codes Review for High Intensities Linacs Computations ....... 411
  R. Duperrier, N. Pichoff, D. Uriot

**Geometric Numerical Algorithms:**
**Theoretical Aspects and Applications**

Diagonalization of Time Varying Symmetric Matrices ...................... 419
  M. Baumann, U. Helmke

Conservation Properties of Symmetric BVMs Applied to Linear
Hamiltonian Problems .................................................. 429
  P. Amodio, F. Iavernaro, D. Trigiante

A Fixed Point Homotopy Method for Efficient Time-Domain
Simulation of Power Electronic Circuits ................................ 439
  E. Chiarantoni, G. Fornarelli, S. Vergura, T. Politi

A Fortran90 Routine for the Solution of Orthogonal Differential
Problems ................................................................. 449
  F. Diele, T. Politi, I. Sgura

Two Step Runge-Kutta-Nyström Methods for $y'' = f(x, y)$
and P-Stability .......................................................... 459
  B. Paternoster

Some Remarks on Numerical Methods for Second Order Differential
Equations on the Orthogonal Matrix Group ................................ 467
  N. Del Buono, C. Elia

Numerical Comparison between Different Lie-Group Methods for
Solving Linear Oscillatory ODEs ........................................ 476
  F. Diele, S. Ragni

Multisymplectic Spectral Methods for the Gross-Pitaevskii Equation .... 486
  A.L. Islas, C.M. Schober
Solving Orthogonal Matrix Differential Systems in *Mathematica*........... 496  
*M. Sofroniou, G. Spaletta*

Symplectic Methods for Separable Hamiltonian Systems .................. 506  
*M. Sofroniou, G. Spaletta*

Numerical Treatment of the Rotation Number for the Forced Pendulum .... 516  
*R. Pavani*

Symplectic Method Based on the Matrix Variational Equation for  
Hamiltonian System............................................................ 526  
*N. Del Buono, C. Elia, L. Lopez*

**Soft Computing: Systems and Applications**

Variants of Learning Algorithm Based on Kolmogorov Theorem............. 536  
*R. Neruda, A. Štědrý, J. Drkošová*

Genetic Neighborhood Search ................................................ 544  
*J.J. Domínguez, S. Lozano, M. Calle*

Application of Neural Networks Optimized by Genetic Algorithms to  
Higgs Boson Search ........................................................... 554  
*F. Hakl, M. Hlaváček, R. Kalous*

Complex Situation Recognition on the Basis of Neural Networks in  
Shipboard Intelligence System............................................... 564  
*Y. Nechaev, A. Degtyarev, I. Kiryukhin*

Dynamic Model of the Machining Process on the Basis of Neural  
Networks: From Simulation to Real Time Application ...................... 574  
*R.E. Haber, R.H. Haber, A. Alique, S. Ros, J.R. Alique*

Incremental Structure Learning of Three-Layered Gaussian RBF  
Networks ................................................................. 584  
*D. Coufal*

Hybrid Learning of RBF Networks ........................................... 594  
*R. Neruda, P. Kudová*

Stability Analysis of Discrete-Time Takagi-Sugeno Fuzzy Systems ....... 604  
*R. Pytelková, P. Hušek*

Fuzzy Control System Using Nonlinear Friction Observer for the  
Mobile Robot ................................................................. 613  
*W.-Y. Lee, I.-S. Lim, U.-Y. Huh*
## PDE Software

Efficient Implementation of Operators on Semi-unstructured Grids  
*C. Pflaum, D. Seider*

622

**hype**: A Library of High Performance Preconditioners  
*R.D. Falgout, U. Meier Yang*

632

Data Layout Optimizations for Variable Coefficient Multigrid  
*M. Kowarschik, U. Rüde, C. Weiß*

642

**gridlib**: Flexible and Efficient Grid Management for  
Simulation and Visualization  
*F. Hülsemann, P. Kipfer, U. Rüde, G. Greiner*

652

Space Tree Structures for PDE Software  
*M. Bader, H.-J. Bungartz, A. Frank, R. Mundani*

662

The Design of a Parallel Adaptive Multi-level Code in Fortran 90  
*W.F. Mitchell*

672

OpenMP versus MPI for PDE Solvers Based on Regular Sparse  
Numerical Operators  
*M. Nordén, S. Holmgren, M. Thuné*

681

High-Level Scientific Programming with Python  
*K. Hinsen*

691

Using CORBA Middleware in Finite Element Software  
*J. Lindemann, O. Dahlblom, G. Sandberg*

701

On Software Support for Finite Difference Schemes Based on Index  
Notation  
*K. Åhlander, K. Otto*

711

A Component-Based Architecture for Parallel Multi-physics PDE  
Simulation  
*S.G. Parker*

719

Using Design Patterns and XML to Construct an Extensible Finite  
Element System  
*J. Barr von Oehsen, C.L. Cox, E.C. Cyr, B.A. Malloy*

735

**GrAL** – The Grid Algorithms Library  
*G. Berti*

745

A Software Strategy towards Putting Domain Decomposition at the  
Centre of a Mesh-Based Simulation Process  
*P. Chow, C. Addison*
XXXVIII Table of Contents, Part III

A Software Framework for Mixed Finite Element Programming .......... 764
  H.P. Langtangen, K.-A. Mardal

Fast, Adaptively Refined Computational Elements in 3D ............... 774
  C.C. Douglas, J. Hu, J. Ray, D. Thorne, R. Tuminaro

Numerical Models in Geomechanics

Preconditioning Methods for Linear Systems with Saddle Point Matrices ................................................................. 784
  O. Axelsson, M. Neytcheva

Mixed-Hybrid FEM Discrete Fracture Network Model of the Fracture Flow ............................................................... 794
  J. Maryška, O. Severýn, M. Vohralík

Parallel Realization of Difference Schemes of Filtration Problem in a Multilayer System ........................................ 804
  M. Pavluš, E. Hayryan

Stokes Problem for the Generalized Navier-Stokes Equations .......... 813
  A. Bourchtein, L. Bourchtein

Domain Decomposition Algorithm for Solving Contact of Elastic Bodies .. 820
  J. Daněk

Parallel High-Performance Computing in Geomechanics with Inner/Outer Iterative Procedures ................................. 830
  R. Blaheta, O. Jakl, J. Starý

Reliable Solution of a Unilateral Frictionless Contact Problem in Quasi-Coupled Thermo-Elasticity with Uncertain Input Data .......... 840
  I. Hlaváček, J. Nedoma

Education in Computational Sciences

Computational Engineering Programs at the University of Erlangen-Nuremberg ........................................... 852
  U. Ruede

Teaching Mathematical Modeling: Art or Science? ....................... 858
  W. Wiechert

CSE Program at ETH Zurich: Are We Doing the Right Thing? ........ 863
  R. Jeltsch, K. Nipp

An Online Environment Supporting High Quality Education in Computational Science ............................................. 872
  L. Anido, J. Santos, M. Caeiro, J. Rodríguez
Computing, Ethics and Social Responsibility: Developing Ethically Responsible Computer Users for the 21st Century ............ 882
  M.D. Lintner

Teaching Parallel Programming Using Both High-Level and Low-Level Languages .......................................................... 888
  Y. Pan

Computational Science in High School Curricula: The ORESPICS Approach ................................................................. 898
  P. Mori, L. Ricci

Computational Chemistry and Molecular Dynamics

Parallel Approaches to the Integration of the Differential Equations for Reactive Scattering ............................................... 908
  V. Piermarini, L. Pacifici, S. Crocchianti, A. Laganà

Fine Grain Parallelism for Discrete Variable Approaches to Wavepacket Calculations .................................................. 918
  D. Bellucci, S. Tasso, A. Laganà

A Molecular Dynamics Study of the Benzene... Ar₂ Complexes ........... 926
  A. Riganelli, M. Memelli, A. Laganà

Beyond Traditional Effective Intermolecular Potentials and Pairwise Interactions in Molecular Simulation ......................... 932
  G. Marcelli, B.D. Todd, R.J. Sadus

Density Functional Studies of Halonium Ions of Ethylene and Cyclopentene ............................................................... 942
  M.P. Sigalas, V.I. Teberekidis

Methodological Problems in the Calculations on Amorphous Hydrogenated Silicon, a-Si:H .............................................. 950
  A.F. Sax, T. Krüger

Towards a GRID Based Portal for an a Priori Molecular Simulation of Chemical Reactivity ............................................. 956
  O. Gervasi, A. Laganà, M. Lobbiani

Geocomputation and Evolutionary Computation

The Enterprise Resource Planning (ERP) System and Spatial Information Integration in Tourism Industry — Mount Emei for Example ......................................................... 966
  L. Yan, J.-b. Wang, Y.-a. Ma, J. Dou
3D Visualization of Large Digital Elevation Model (DEM) Data Set ........ 975
   M. Sun, Y. Xue, A.-N. Ma, S.-J. Mao

Dynamic Vector and Raster Integrated Data Model Based
on Code-Points .................................................. 984
   M. Sun, Y. Xue, A.-N. Ma, S.-J. Mao

K-Order Neighbor: The Efficient Implementation Strategy for
Restricting Cascaded Update in Realm ............................ 994
   Y. Zhang, L. Zhou, J. Chen, R. Zhao

A Hierarchical Raster Method for Computing Voroni Diagrams Based
on Quadtrees .......................................................... 1004
   R. Zhao, Z. Li, J. Chen, C.M. Gold, Y. Zhang

The Dissection of Three-Dimensional Geographic Information Systems ... 1014
   Y. Xue, M. Sun, Y. Zhang, R. Zhao

Genetic Cryptoanalysis of Two Rounds TEA ...................... 1024
   J.C. Hernández, J.M. Sierra, P. Isasi, A. Ribagorda

Genetic Commerce – Intelligent Share Trading .................... 1032
   C. Vassell

**Modeling and Simulation in Supercomputing and Telecommunications**

Efficient Memory Page Replacement on Web Server Clusters .......... 1042
   J.Y. Chung, S. Kim

Interval Weighted Load Balancing Method for Multiple Application
Gateway Firewalls .................................................... 1051
   B.K. Woo, D.S. Kim, S.S. Hong, K.H. Kim, T.M. Chung

Modeling and Performance Evaluation of Multistage Interconnection
Networks with Nonuniform Traffic Pattern ......................... 1061
   Y. Mun, H. Choo

Real-Time Performance Estimation for Dynamic, Distributed
Real-Time Systems .................................................. 1071
   E.-N. Huh, L.R. Welch, Y. Mun

A Load Balancing Algorithm Using the Circulation of a Single
Message Token ..................................................... 1080
   J. Hwang, W.J. Lee, B.G. Lee, Y.S. Kim

A Collaborative Filtering System of Information on the Internet ..... 1090
   D. Lee, H. Choi
