Pervasive Computing

5th International Conference, PERVASIVE 2007
Toronto, Canada, May 13-16, 2007
Proceedings
Preface

On behalf of the Organizing Committee for Pervasive 2007, welcome to the proceedings of the Fifth International Conference on Pervasive Computing. The year 2007 was a milestone for this young conference series, as it marked the first year that it was held outside of Europe. This “globalization” of the Pervasive conference is further evidence of its emergence as one of the most respected venues for publishing research on pervasive and ubiquitous computing. Each Pervasive conference represents a snapshot of our field, capturing the state of the art in technology, the research challenges we are addressing, as well as the people that form the Pervasive community. Each year’s proceedings represent an opportunity to learn about new areas and identify upcoming research opportunities, and 2007 was no exception.

Pervasive 2007 attracted 132 high-quality submissions, from which the Technical Program Committee accepted 21 papers, resulting in a competitive 16% acceptance rate. In total, there were over 400 individual authors from 32 countries, coming from a wide array of disciplines and from both academic and industrial organizations. Papers were selected solely on the quality of their peer reviews using a double-blind review process. We were fortunate to draw on the combined experience of over 125 years of research in pervasive and ubiquitous computing in our 28 Program Committee members, coming from the most prestigious universities and research labs in Europe, North America, and Asia. Program Committee members were aided by no less than 177 external reviewers in this rigorous process, in which each Committee member wrote about ten reviews and each external reviewer between one and six. The total of 541 entered reviews resulted in an average of 4.2 reviews per paper, or almost 2,000 words of feedback (some 5 pages). To ensure that we had quality reviews as well as substantive deliberation on each paper, a final discussion phase generated 833 discussion items before the start of the Committee meeting. As a result, some 60 submissions were selected for discussion at the two-day, 14-hour Program Committee meeting, where a strict schedule and many additional reading assignments ensured that each candidate paper had been thoroughly evaluated by at least three Committee members present.

Pervasive has traditionally been a practitioner’s conference, and the 2007 program certainly shows that tradition. With pervasive and ubiquitous computing gradually coming of age, research papers had to demonstrate not only novelty, but also applicability and feasibility. A major theme throughout the technical paper presentations was thus the rigorous evaluation and re-evaluation of novel and (seemingly) well-known principles in both home and work domains. Location continued to play a major role in the community, although refinement of existing principles and its implications for applications and services received increasing attention. Security and privacy issues, long since on the Pervasive agenda, were
considered more and more with an eye towards usability and practicality, especially in the context of location-aware applications, where the increased availability of real-world data begins to allow realistic analyses. Last but not least, the prevalence of mobile phones and their use as an interface to a variety of applications and services emerged as an established new community research focus.

The research papers, although at the core of the Pervasive conference series, are hardly its only highlight. In addition to the technical sessions, Pervasive 2007 featured a keynote speech by Adam Greenfield—an internationally recognized writer and user experience consultant. As with all of its predecessors, the 2007 conference also contained a poster and demo reception, as well as a full day of workshops and doctoral colloquium. As a first for Pervasive, the final day of the conference was dedicated to tutorials by research community leaders. This series of short tutorials focused on the fundamentals of pervasive computing and were intended as an introduction for new researchers and practitioners in the field.

Several organizations provided financial and logistical assistance in putting Pervasive 2007 together, and we would like to acknowledge their support. We thank the University of Toronto for hosting the conference and managing the local logistics. We would also like to thank the staff and students at the Georgia Tech College of Computing for hosting the Program Committee meeting and ensuring an ample supply of food, coffee, and post-its throughout the two days. We very much appreciate the support of our Gold Sponsors Google, Intel and Nokia, Bronze Sponsor SMART Technologies Inc., along with the generous donations from FXPAL, MERL, and Microsoft Research—all of this was essential to helping us provide an excellent conference experience for all attendees. Lastly, we would like to thank, most of all, the authors who submitted their work to Pervasive, and the Program Committee members and our external reviewers who spent many hours reviewing submissions, shepherding papers, and providing the feedback needed to create this final program.

May 2007

Anthony LaMarca
Marc Langheinrich
Khai Truong
Organization

Conference Committee

General Chair
Khai Truong, University of Toronto, Canada

Program Co-chairs
Anthony LaMarca, Intel Research Seattle, USA
Marc Langheinrich, ETH Zurich, Switzerland

Demonstrations
Darren Leigh, MERL, USA
Gerald Morrison, Smart Technologies, Canada

Doctoral Colloquium
Boriana Koleva, University of Nottingham, UK
Albrecht Schmidt, Fraunhofer IAIS and b-it
University of Bonn, Germany

Late Breaking Results
Regan Mandryk, Dalhousie University, Canada
Desney Tan, Microsoft Research, USA

Tutorials
John Krumm, Microsoft Research, USA
Tom Pfeifer, Waterford Institute of Technology, Ireland

Videos
Hao Chu, National Taiwan University, Taiwan
James Scott, Microsoft Research Cambridge, UK

Workshops
Anind Dey, Carnegie Mellon University, USA
Gillian Hayes, Georgia Institute of Technology, USA

Publications
Lorcan Coyle, University College Dublin, Ireland
Steve Neely, University College Dublin, Ireland

Publicity
Matthias Kranz, Technische Universität Braunschweig, Germany
Alex Varshavsky, University of Toronto, Canada

Student Volunteers
Julie Kientz, Georgia Institute of Technology, USA
Iqbal Mohomed, University of Toronto, Canada

Business Manager
Sandy Romas, University of Toronto, Canada

Events Coordinator
Cody Copeman, University of Toronto, Canada
Program Committee

Gregory Abowd, Georgia Institute of Technology, USA
Louise Barkhuus, University of Glasgow, UK
Michael Beigl, TU Braunschweig, Germany
A.J. Brush, Microsoft Research, USA
Nigel Davies, Lancaster University, UK
Maria Ebbling, IBM T. J. Watson Research Center, USA
Alois Ferscha, Linz University, Austria
Christian Floerkemeier, ETH Zurich, Switzerland
Adrian Friday, Lancaster University, UK
Hans Gellersen, Lancaster University, UK
Mike Hazas, Lancaster University, UK
Ken Hinckley, Microsoft Research, USA
Hideki Koike, University of Electro-Communications, Japan
John Krumm, Microsoft Research, USA
Anthony LaMarca, Intel Research Seattle, USA
Marc Langheinrich, ETH Zurich, Switzerland
Pedro Marron, University of Stuttgart, Germany
Kenji Mase, Nagoya University, Japan
Yasuto Nakanishi, Keio University, Japan
Donald J. Patterson, University of California at Irvine, USA
Jun Rekimoto, Sony CSL, Japan
Tom Rodden, University of Nottingham, UK
Bernt Schiele, TU Darmstadt, Germany
Chris Schmandt, Massachusetts Institute of Technology, USA
Albrecht Schmidt, Fraunhofer IAIS and b-it University of Bonn, Germany
James Scott, Microsoft Research Cambridge, UK
Desney Tan, Microsoft Research, USA
Andrea Vitaletti, Sapienza - Università di Roma, Italy
Harald Vogt, SAP Research, Germany
Jacob O. Wobbrock, University of Washington, USA

Reviewers

Robert Adelmann, ETH Zurich, Switzerland
Luca Allulli, Sapienza - Università di Roma, Italy
Ken Anderson, Intel Research, USA
Takuya Araki, NEC Corporation, Japan
Yuji Ayatsuka, Sony Computer Science Laboratories, Japan
Maribeth Back, FXPAL, USA

# Table of Contents

## Reaching Out
Augmenting Looking, Pointing and Reaching Gestures to Enhance the Searching and Browsing of Physical Objects .......................... 1  
*David Merrill and Pattie Maes*

Reach Out and Touch: Using NFC and 2D Barcodes for Service Discovery and Interaction with Mobile Devices ............................... 19  
*Eamonn O’Neill, Peter Thompson, Stavros Garzonis, and Andrew Warr*

Combining Web, Mobile Phones and Public Displays in Large-Scale: Manhattan Story Mashup ................................. 37  
*Ville H. Tuulos, Jürgen Scheible, and Heli Nyholm*

## Context and Its Application
PersonisAD: Distributed, Active, Scrutable Model Framework for Context-Aware Services .................................................. 55  
*Mark Assad, David J. Carmichael, Judy Kay, and Bob Kummerfeld*

An Exploration into Activity-Informed Physical Advertising Using PEST ........................................................................ 73  
*Mathias C. Sala, Kurt Partridge, Linda Jacobson, and James “Bo” Begole*

Evaluating a Wearable Display Jersey for Augmenting Team Sports Awareness ..................................................... 91  
*Mitchell Page and Andrew Vande Moere*

Using Location, Bearing and Motion Data to Filter Video and System Logs ........................................................................ 109  
*Alistair Morrison, Paul Tennent, John Williamson, and Matthew Chalmers*

## Security and Privacy
Inference Attacks on Location Tracks .................................................. 127  
*John Krumm*

Shake Well Before Use: Authentication Based on Accelerometer Data ........................................................ 144  
*Rene Mayrhofer and Hans Gellersen*
# Table of Contents

Virtual Walls: Protecting Digital Privacy in Pervasive Environments

Apu Kapadia, Tristan Henderson, Jeffrey J. Fielding, and David Kotz

Trust, Privacy and Relationships in ‘Pervasive Education’: Families’ Views on Homework and Technologies

Katie Fraser, Tom Rodden, and Claire O’Malley

## Understanding Use

Operating Appliances with Mobile Phones – Strengths and Limits of a Universal Interaction Device

Christof Roduner, Marc Langheinrich, Christian Floerkemeier, and Beat Schwarzentrub

Portable, But Not Mobile: A Study of Wireless Laptops in the Home

Allison Woodruff, Ken Anderson, Scott D. Mainwaring, and Ryan Aipperspach

Managing Communication Availability and Interruptions: A Study of Mobile Communication in an Oncology Department

Jeremiah Scholl, Per Hasvold, Eva Henriksen, and Gunnar Ellingsen

## Sensing

Using Ground Reaction Forces from Gait Analysis: Body Mass as a Weak Biometric

Jam Jenkins and Carla Ellis

Weight-Sensitive Foam to Monitor Product Availability on Retail Shelves

Christian Metzger, Jan Meyer, Elgar Fleisch, and Gerhard Tröster

Assessing and Optimizing the Range of UHF RFID to Enable Real-World Pervasive Computing Applications

Steve Hodges, Alan Thorne, Hugo Mallinson, and Christian Floerkemeier

Movement-Based Group Awareness with Wireless Sensor Networks

Raluca Marin-Perianu, Mihai Marin-Perianu, Paul Havinga, and Hans Scholten

## Finding and Positioning

Zone-Based RSS Reporting for Location Fingerprinting

Mikkel Baun Kjærgaard, Georg Treu, and Claudia Linnhoff-Popien
TrackSense: Infrastructure Free Precise Indoor Positioning Using Projected Patterns .................................................. 334
  Moritz Köhler, Shwetak N. Patel, Jay W. Summet,
  Erich P. Stuntebeck, and Gregory D. Abowd

Objects Calling Home: Locating Objects Using Mobile Phones .......... 351
  Christian Frank, Philipp Bolliger, Christof Roduner, and
  Wolfgang Kellerer
