Three-Dimensional Television
Three-Dimensional Television
Capture, Transmission, Display

With 316 Figures and 21 Tables
Preface

This book was motivated by, and most of its chapters derived from work conducted within, the Integrated Three-Dimensional Television—Capture, Transmission, and Display project which is funded by the European Commission 6th Framework Information Society Technologies Programme and led by Bilkent University, Ankara. The project involves 19 partner institutions from 7 countries and over 180 researchers throughout Europe and extends over the period from September 2004 to August 2008. The project web site is www.3dtv-research.org.

The editors would like to thank all authors who contributed their work to this edited volume. All contributions were reviewed, in most cases by leading experts in the area. We are grateful to all the anonymous reviewers for their help and their fruitful suggestions, which not only provided a basis for accepting or declining manuscripts, but which also improved their quality significantly. We would also like to thank our Editor Christoph Baumann at Springer, Heidelberg for his guidance throughout the process. We hope that this book will prove useful for those interested in three-dimensional television and related technologies and that it will inspire further research that will help make 3DTV a reality in the near future.

The editors’ work is supported by the EC within FP6 under Grant 511568 with the acronym 3DTV.
About the Authors

**Gozde B. Akar** received the BS degree from Middle East Technical University, Turkey in 1988 and MS and PhD degrees from Bilkent University, Turkey in 1990 and 1994, respectively, all in electrical and electronics engineering. Currently she is an associate professor with the Department of Electrical and Electronics Engineering, Middle East Technical University. Her research interests are in video processing, compression, motion modeling and multimedia networking.

**Anil Aksay** received his BS and MS degrees in electrical and electronics engineering from Middle East Technical University, Ankara, Turkey in 1999 and 2001, respectively. Currently he is with the Multimedia Research Group in METU, where he is working as a researcher towards the PhD degree. His research interests include multiple description coding, image and video compression, stereoscopic and multi-view coding, video streaming and error concealment.

**A. Aydin Alatan** received his BS degree from Middle East Technical University, Ankara, Turkey in 1990, the MS and DIC degrees from Imperial College, London, UK in 1992, and the PhD degree from Bilkent University, Ankara, Turkey in 1997, all in electrical engineering. He was a post-doctoral research associate at Rensselaer Polytechnic Institute and New Jersey Institute of Technology between 1997 and 2000. In August 2000, he joined the faculty of Electrical and Electronics Engineering Department at Middle East Technical University.

**Jaakko Astola** received the PhD degree in mathematics from Turku University, Finland in 1978. Between 1979 and 1987 he was with the Department of Information Technology, Lappeenranta University of Technology, Lappeenranta, Finland. From 1987 to 1992 he was an associate professor in applied mathematics at Tampere University, Tampere, Finland. From 1993 he has been a professor of Signal Processing at Tampere University of Technology.
His research interests include signal processing, coding theory, spectral techniques and statistics.

Richard Bates is a research fellow within the Imaging and Displays Research Group at De Montfort University, where his main interests are software development for 3DTV displays and evaluating the usability and acceptability of 3DTV displays. He holds a PhD on human-computer interaction.

Kostadin Stoyanov Beev is a researcher in the Central Laboratory of Optical Storage and Processing of Information, Bulgarian Academy of Sciences. He received the PhD degree in 2007 in the area of wave processes physics. His MS degree in engineering physics has two specializations: quantum electronics and laser technique, and medical physics. His research interest is in optics, holography, material science, biophysics and evanescent waves.

Kristina Nikolaeva Beeva is a researcher in the Central Laboratory of Optical Storage and Processing of Information, Bulgarian Academy of Sciences. Her MS degree in engineering physics has two specializations: quantum electronics and laser technique, and medical physics. Her research interest is in the fields of optics, holography, laser technique and biophysics.

Philip Benzie obtained an honours degree in electrical and electronic engineering from Aberdeen University (AU) in 2001. His PhD on the application of finite element analysis to holographic interferometry for non-destructive testing was obtained in 2006 at AU. Currently his research interests include holographic imaging, non-destructive testing and underwater holography.

M. Oguz Bici received the BS degree in electrical and electronics engineering from Middle East Technical University (METU), Ankara, Turkey in 2005. Currently he is with the Multimedia Research Group of the Electrical and Electronics Engineering Department, METU, studying towards a PhD degree. His research interests are multimedia compression, error resilient/multiple description coding and wireless multimedia sensor networks.

Cagdas Bilen received his BS degree in electrical and electronics engineering from Middle East Technical University (METU), Ankara, Turkey in 2005. Currently he is a MS student in the Electrical and Electronics Engineering Department and a researcher in Multimedia Research Group of METU. Among his research topics are image and video compression, error concealment, distributed video coding, multiple description coding, stereoscopic and multiview video coding.

Sukhee Cho received the BS and MS degrees in computer science from Pukyong National University in 1993 and 1995, respectively. She received the PhD degree in electronics and information engineering from Yokohama National University in 1999. She is currently with the Radio and Broadcasting Research Division, Electronics and Telecommunications Research Institute
About the Authors

M. Reha Civanlar received the PhD degree in electrical and computer engineering from North Carolina State University in 1984. He is currently a vice president and director of the Media Lab in DoCoMo USA Labs. He was a visiting professor of computer engineering at Koc University in Istanbul for four years starting in 2002. Before, he was the head of Visual Communications Research Department at AT&T Labs Research. He is a recipient of 1985 Senior Paper Award of the IEEE Signal Processing Society and a fellow of the IEEE.

Edilson de Aguiar received the BS degree in computer engineering from the Espirito Santo Federal University, Vitoria, Brazil in 2002 and the MS degree in computer science from the Saarland University, Saarbrücken, Germany in 2004. He is currently working as a PhD student in the Computer Graphics Group at the Max-Planck-Institut (MPI) Informatik, Saarbrücken, Germany. His research interests include computer animation, motion capture and 3D video.

Stephen DiVerdi is a doctoral candidate at the University of California in Santa Barbara. He received his bachelors degree in computer science from Harvey Mudd College in 2002. His research covers the intersection of graphics, vision, and human computer interaction, with an emphasis on augmented reality.

Funda Durupınar is a PhD candidate at the Department of Computer Engineering, Bilkent University, Ankara, Turkey. She received her BS degree in computer engineering from Middle East Technical University in 2002 and her MS degree in computer engineering from Bilkent University in 2004. Her research interests include physically-based simulation, cloth modeling, behavioral animation and crowd simulation.

Karen Egiazarian received the MS degree in mathematics from Yerevan State University, Armenia, and the PhD degree in physics and mathematics, from Moscow Lomonosov State University, and the DrTech degree from Tampere University of Technology. Currently he is full professor in the Institute of Signal Processing, Tampere University of Technology. His research interests are in the areas of applied mathematics, and signal and image processing.

G. Bora Esmer received his BS degree from Hacettepe University, Ankara in 2001 and the MS degree from Bilkent University, Ankara in 2004. He is a PhD student in the area of signal processing since 2004. His areas of interest include optical information processing and image processing.

Christoph Fehn received the Dr-Ing. degree from Technical University of Berlin, Germany. He currently works as a scientific project manager at Fraunhofer HHI and as an associate lecturer at University of Applied Sciences,
Berlin. His research interests include video processing and coding, computer graphics, and computer vision for applications in the area of immersive media, 3D TV, and digital cinema. He has been involved in MPEG standardization activities for 3D video.

Atanas Gotchev received MS degrees in communications engineering and in applied mathematics from Technical University of Sofia, Bulgaria, the PhD degree in communications engineering from Bulgarian Academy of Sciences, and the DrTech degree from Tampere University of Technology, Finland. Currently he is a senior researcher at the Institute of Signal Processing, Tampere University of Technology. His research interests are in transform methods for signal, image and video processing.

Ügur Güdükbay is an associate professor at the Department of Computer Engineering, Bilkent University, Ankara, Turkey. He received his PhD degree in computer engineering and information science from Bilkent University in 1994. Then, he conducted research as a postdoctoral fellow at Human Modeling and Simulation Laboratory, University of Pennsylvania, USA. His research interests include different aspects of computer graphics, multimedia databases, computational geometry, and electronic arts. He is a senior member of IEEE and a professional member of ACM.

Jana Harizanova is a researcher in the Central Laboratory of Optical Storage and Processing of Information of the Bulgarian Academy of Sciences. Recently she has received her PhD degree in the field of holographic and laser interferometry. Her main research interests include interferometry, diffraction optics and digital signal processing.

Tobias Höllerer is an assistant professor of computer science at the University of California, Santa Barbara, where he leads a research group on imaging, interaction, and innovative interfaces. Höllerer holds a graduate degree in informatics from the Technical University of Berlin and MS and PhD degrees in computer science from Columbia University.

Klaus Hopf received the Dipl-Ing degree in electrical engineering from the Technical University of Berlin, Germany. He has performed work within government-funded research projects on the development of videoconferencing systems, and in research projects developing new technologies and for the representation of video images in high resolution (HDTV) and 3D.

Namho Hur received the BS MS and PhD degrees in electrical and electronics engineering from Pohang University of Science and Technology (POSTECH), Pohang, Korea in 1992, 1994, and 2000. He is currently with the Radio and Broadcasting Research Division, Electronics and Telecommunications Research Institute (ETRI), Daejeon, Korea. As a research scientist, he has been with Communications Research Centre Canada (2003–2004). His main research interests are control theory, power electronics and 3D TV broadcasting systems.
Rossitza Ilieva received the MS degree in physics in 1968 and a post graduation in optics and holography in 1979 from Sofia University. She has experience in stereo imaging and holography (researcher at CLOSPI BAS, 1975–2005). Since then she is a researcher in the Electrical and Electronics Engineering Department of Bilkent University, working on holographic 3DTV displays.

Peter Kauff is the head of the Immersive Media & 3D Video Group in the Image Processing Department of the Fraunhofer HHI. He is with HHI since 1984 and has been involved in numerous German and European projects related to digital HDTV signal processing and coding, interactive MPEG-4-based services, as well as in a number of projects related to advanced 3D video processing for immersive tele-presence and immersive media.

Jinwoong Kim received the BS and MS degrees from the Department of Electronics Engineering of Seoul National University in 1981 and 1983, respectively. He received the PhD degree from the Department of Electrical and Computer Engineering of Texas A&M University in 1993. He joined ETRI in 1983 where he is currently a principal member of research staff. He has been involved in many R&D projects including TDX digital switching system, HDTV encoder system and chipset and MPEG-7 and MPEG-21 core algorithms and applications. He is now 3DTV project leader at ETRI.

Metodi Kovachev received the MS degree in 1961 and the PhD degree in physics in 1982 from Sofia University. He has experience in optical design, stereo imaging, holography, optical processing, electronics (director and senior researcher at CLOSPI, Bulgarian Academy of Sciences, 1975–2005). Since then he is a senior researcher in the Electrical and Electronics Engineering Department of Bilkent University, working on holographic 3DTV displays.

Alper Koz received the BS and MS degrees in Electrical and Electronics Engineering from Middle East Technical University, Ankara, Turkey in 2000 and 2002, respectively. He is currently a PhD student and a research assistant in the same department. His research interests include watermarking techniques for image, video, free view, and 3D television.

Hyun Lee received the BS degree in electronics engineering from the Kyungpook National University, Korea in 1993 and the MS degree from KAIST (Korean Advanced Institute of Science and Technology), Korea in 1996. He enrolled in a doctoral course at KAIST in 2005. Since 1999, he has been with the Digital Broadcasting Research Division in ETRI (Electronics and Telecommunications Research Institute). His current interests include mobile multimedia broadcasting, digital communications and 3DTV systems.

Wing Kai Lee holds a PhD degree in optical engineering from the University of Warwick. He is currently working as a research fellow in the Imaging and Displays Research Group, De Montfort University. His research interests include 3D display and imaging, high speed imaging, holography, optical non-contact measurements, digital video coding, and medical imaging.
Marcus A. Magnor heads the Computer Graphics Lab at Technical University Braunschweig. He received his BA (1995) and MS (1997) in physics and his PhD (2000) in electrical engineering. He established the independent research group Graphics-Optics-Vision at the Max-Planck-Institut Informatik in Saarbrücken and received the venia legendi in computer science from Saarland University in 2005. His research interests entwine around the visual information processing pipeline. Recent and ongoing research topics include video-based rendering, 3DTV, as well as astrophysical visualization.

Aydemir Memişoğlu works as a software engineer at Havelsan AŞ., Ankara, Turkey. He received his BS and MS degrees in computer engineering from Bilkent University, Ankara, Turkey in 2000 and 2003, respectively. His research interests include different aspects of computer graphics, specifically human modeling and animation.

Philipp Merkle received the Dipl-Ing degree from the Technical University of Berlin, Germany in 2006. He has been with Fraunhofer HHI since 2003. His research interests are mainly in the field of representation and coding of free viewpoint and multi-view video, including MPEG standardization activities.

Karsten Müller received the Dr-Ing degree in electrical engineering and the Dipl-Ing degree from the Technical University of Berlin, Germany, in 2006 and 1997 respectively. He has been with the Fraunhofer Institute for Telecommunications, Heinrich-Hertz-Institut, Berlin since 1997. His research interests are mainly in the field of representation, coding and reconstruction of 3D scenes. He has been involved in MPEG standardization activities.

Andrey Norkin received his MS degree in computer science from the Ural State Technical University, Russia in 2001 and LicTech degree in signal processing from Tampere University of Technology, Finland in 2005. Currently he is a researcher at the Institute of Signal Processing, Tampere University of Technology, where he is working towards his PhD degree. His research interests include image and video coding, error resilience of compressed images, video, and 3D meshes.

Alex Olwal is a PhD candidate at KTH (The Royal Institute of Technology) in Stockholm. He was a visiting researcher at Columbia University in 2001–2003 and at UC Santa Barbara in 2005. Alex’s research focuses on interaction techniques and novel 3D user interfaces, such as augmented and mixed reality. His research interests include multimodal interaction, interaction devices, and ubiquitous computing.

Levent Onural received his PhD in electrical and computer engineering from SUNY at Buffalo in 1985 (BS, MS from METU) and is presently a full professor at Bilkent University. He received a TUBITAK award in 1995 and an IEEE Third Millenium Medal in 2000, and is an associate editor of IEEE Transactions on Circuits and Systems for Video Technology. Currently he is leading the European Commission funded 3DTV Project as the coordinator.
Jörn Ostermann studied electrical engineering and communications engineering. Since 2003 he is full professor and head of the Institut für Informationsverarbeitung at the Leibniz Universität Hannover, Germany. He is a fellow of the IEEE and a member of the IEEE Technical Committee on Multimedia Signal Processing and past chair of the IEEE CAS Visual Signal Processing and Communications (VSPC) Technical Committee. His current research interests are video coding and streaming, 3D modeling, face animation, and computer-human interfaces.

Haldun M. Ozaktas received a PhD degree from Stanford University in 1991. He joined Bilkent University, Ankara in 1991, where he is presently professor of electrical engineering. In 1992 he was at the University of Erlangen-Nürnberg as an Alexander von Humboldt Fellow. In 1994 he worked as a consultant for Bell Laboratories, New Jersey. He is the recipient of the 1998 ICO International Prize in Optics and the Scientific and Technical Research Council of Turkey Science Award (1999), and a member of the Turkish Academy of Sciences and a fellow of the Optical Society of America.

Bülent Özyüce is a professor at the Department of Computer Engineering and the dean of the Faculty of Art, Design and Architecture, Bilkent University, Ankara, Turkey. He formerly taught at the University of Pennsylvania, USA, Philadelphia College of Arts, USA, and the Middle East Technical University, Turkey, and worked as a member of the research staff at the Schlumberger Palo Alto Research Center, USA. His research areas include different aspects of computer graphics and user interface design. He is a member of IEEE, ACM and IUA.

Ismo Rakkolainen received a DrTech degree from the Tampere University of Technology, Finland in 2002. He has 26 journal and conference proceedings, articles, 1 book chapter, 4 patents and several innovation awards. His primary research interests include 3D display technology, 2D mid-air displays, virtual reality, interaction techniques and novel user interfaces.

Tarik Reyhan received his BS and MS degree from the Electrical Engineering Department of METU in 1972 and 1975, respectively. He received his PhD degree from the Electrical Engineering Department of the University of Birmingham, UK in 1981. He worked in ASELSAN from 1981 to 2001. He joined the Electrical and Electronics Engineering Department of Bilkent University in 2001. His area of interests include R&D management, telecommunications, RF design, electronic warfare and night vision.

Simeon Hristov Sainov is a professor in Central Laboratory of Optical Storage and Processing of Information, Bulgarian Academy of Sciences, and the head of the Holographic and Optoelectronic Investigations Group. He has graduated from St. Petersburg State University, Faculty of Physics. His major fields of scientific interest are physical optics, near-field optics, holography and laser refractometry.
Ventseslav Sainov is the director of the Central Laboratory of Optical Storage and Processing of Information of the Bulgarian Academy of Sciences. He has expertise in the fields of light sensitive materials, holography, holographic and laser interferometry, shearography, non-destructive testing, 3D micro/macro measurements, and optical and digital processing of interference patterns.

Hans-Peter Seidel is the scientific director and chair of the Computer Graphics Group at the Max-Planck-Institut (MPI) Informatik and a professor of computer science at Saarland University. He has received grants from a wide range of organizations, including the German National Science Foundation (DFG), the German Federal Government (BMBF), the European Community (EU) and NATO. In 2003 Seidel was awarded the Leibniz Preis, the most prestigious German research award, from the German Research Foundation (DFG).

Ian Sexton holds a PhD on 3D displays architecture and his research interests include 3D display systems, computer architecture, computer graphics, and image processing. He founded the Imaging and Displays Research Group at De Montfort University and is an active member of the SID and sits on its UK and Ireland Chapter Committee.

Aljoscha Smolic received the Dr-Ing. degree from Aachen University of Technology in 2001. He is a scientific project manager at the Fraunhofer HHI and an adjunct professor at the Technical University of Berlin. His research interests include video processing and coding, computer graphics, and computer vision. He has been leading MPEG standards activities for 3D video.

Ralf Sondershaus received his Diplom (MS) degree in computer science from the University of T¨ubingen in 2001. From 2001 until 2003, he worked in the field of geographic visualization. From 2003, he was a PhD candidate at the Department for Graphical-Interactive Systems (GRIS) at the University of Tübingen where he received his PhD in 2007. His research interests include compact multi-resolution models for huge surface and volume meshes, volume visualization and geographic information systems (GIS).

Nikolce Stefanoski studied mathematics and computer science with telecommunications as field of application. Since January 2004 he has been working toward a PhD degree at the Institut f¨ur Informationsverarbeitung of the Leibniz Universit¨at Hannover, Germany. His research interests are coding of time-variant 3D geometry, signal processing, and stochastics.

Elena Stoykova is a member of the SPIE and scientific secretary of the Central Laboratory of Optical Storage and Processing of Information of the Bulgarian Academy of Sciences. She has an expertise in the fields of interferometry, diffraction optics, digital signal processing, Monte-Carlo simulation. She is the author of more than 100 publications in scientific journals and proceedings.
Phil Surman holds a PhD on 3D television displays from De Montfort University. He has been conducting independent research for many years on 3D television. He helped to instigate several 3DTV European projects and is currently working on multi-viewer 3DTV displays at the Imaging and Displays Research Group.

A. Murat Tekalp received the PhD degree in electrical, computer and systems engineering from Rensselaer, Troy, New York in 1984. He has been with Eastman Kodak Company (1984–1987) and University of Rochester, New York (1987–2005), where he has been promoted to Distinguished University Professor. Since 2001, he is a professor at Koc University, Istanbul, Turkey. He has been selected a Distinguished Lecturer by IEEE Signal Processing Society and is a fellow of IEEE.

Christian Theobalt is a postdoctoral researcher at the MPI Informatik in Saarbrücken, Germany and head of the junior research group 3D Video and Vision-based Graphics within the Max-Planck Center for Visual Computing and Communication. His research interests include free-viewpoint and 3D video, markerless optical motion capture, 3D computer vision, and image- and physics-based rendering.

George A. Triantafyllidis received the Diploma and PhD degrees from the Electrical and Computer Engineering Department, Aristotle University of Thessaloniki, Greece in 1997 and 2002, respectively. He has been with Informatics and Telematics Institute, Thessaloniki, Greece from 2000 to 2004 as a research associate and since 2004 as a senior researcher. His research interests include 3D data processing, medical image communication, multimedia signal processing, image analysis and stereo image sequence coding.

Libor Váša graduated from the University of West Bohemia in 2004 with a specialisation in computer graphics and data visualisation. Currently he is working towards his PhD degree in the Computer Graphics Group at the University of West Bohemia in the field of dynamic mesh compression and simplification.

John Watson was appointed to a chair (professorship) in optical engineering at Aberdeen University in 2004. His research interests include underwater holography, subsea laser welding, laser induced spectral analysis and optical image processing. He is an elected member of the administrative committee of OES and a fellow of the IET and IOP.

Thomas Wiegand is the head of the Image Communication Group in the Image Processing Department of Fraunhofer HHI. He received the Dipl-Ing degree in electrical engineering from the Technical University of Hamburg-Harburg, Germany in 1995 and the Dr-Ing degree from the University of Erlangen-Nuremberg, Germany in 2000. He is associated rapporteur of ITU-T VCEG, associated rapporteur/co-chair of the JVT, and associated chair of MPEG Video.
About the Authors

**Mehmet Şahin Yeşil** is a PhD student at the Institute of Applied Mathematics, Middle East Technical University, Ankara, Turkey. He received his BS and MS degrees in computer engineering from Bilkent University, Ankara, Turkey in 2000 and 2003, respectively. His research interests are computer graphics, cryptography, and computer and network security. He works as an officer at the Turkish Air Forces.

**Kugjin Yun** received the BS and MS degrees in computer engineering from Chunbuk National University of Korea in 1999 and 2001. He joined the Electronics and Telecommunications Research Institute (ETRI) in 2001, and he is currently with the Broadcasting System Research Group. His research interests include the 3D T-DMB and 3DTV broadcasting systems.

**Xenophon Zabulis** received his BA, MS and PhD degrees in computer science degree from the University of Crete in 1996, 1998, and 2001, respectively. He has worked as a postdoctoral fellow at the Computer and Information Science Department, at the interdisciplinary General Robotics, Automation, Sensing and Perception Laboratory and at the Institute for Research in Cognitive Science, both at the University of Pennsylvania. He is currently a research fellow at the Institute of Informatics and Telematics, Centre for Research and Technology Hellas, Thessaloniki, Greece.
Contents
