IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP’s aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

"IFIP’s mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people."

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP’s events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is less rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is in information may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.
Technological Innovation for Sustainability

Second IFIP WG 5.5/SOCOLNET Doctoral Conference on Computing, Electrical and Industrial Systems, DoCEIS 2011
Costa de Caparica, Portugal, February 21-23, 2011
Proceedings

Springer
Preface

Technological Innovation and Sustainability Concerns

The subject of sustainability is a concern of growing importance, present in most strategic and political agendas, and also a prevalent issue in science and technology, leading to related terms such as sustainable development and even sustainability science. Encompassing a growing awareness of the political sectors and society in general for the importance of sustainability, the business sector has also started to acknowledge that preserving the environment and the other inter-related pillars of sustainability, i.e., the economic and social dimensions, is both good business and a moral obligation. New technological developments, in all fields, as major drivers of change, need to embed such concerns as well. As doctoral programs in science and engineering are important sources of innovative ideas and techniques that might lead to new products, technological innovation, and even new organizational and governance models with strong economic impact, it is important that the issue of sustainability becomes an intrinsic part of those programs.

Typically, PhD students are not experienced researchers, being rather in the process of learning how to do research. Nevertheless, a number of empiric studies also show that a high number of technological innovation ideas are produced in the early careers of researchers. From the combination of the eagerness to try new approaches and directions of young doctoral students with the experience and broad knowledge of their supervisors, an important pool of innovation potential emerges. The DoCEIS series of doctoral conferences on Computing, Electrical and Industrial Systems aim at creating a space for sharing and discussing ideas and results from doctoral research in these inter-related areas of engineering. Innovative ideas and hypotheses can be better enhanced when presented and discussed in an encouraging and open environment. DoCEIS aims to provide such an environment, releasing PhD students from the pressure of presenting their propositions in more formal contexts.

The second edition of DoCEIS, which was sponsored by SOCOLNET, IFIP and the IEEE Industrial Electronics Society, attracted a considerable number of paper submissions from a large number of PhD students (and their supervisors) from 16 countries. This book comprises the works selected by the International Program Committee for inclusion in the main program and covers a wide spectrum of topics, ranging from collaborative enterprise networks to microelectronics. Thus, novel results and ongoing research are presented, illustrated, and discussed in areas such as:

- Collaborative networks models and support
- Service-oriented systems
- Computational intelligence
As a gluing element, all authors were asked to explicitly indicate the (potential) contribution of their work to sustainability.

We expect that this book will provide readers with an inspiring set of promising ideas, presented in a multi-disciplinary context, and that by their diversity these results can trigger and motivate new research and development directions.

We would like to thank all the authors for their contributions. We also appreciate the dedication of the DoCEIS Program Committee members who both helped with the selection of articles and contributed with valuable comments to improve their quality.

December 2010

Organized by: PhD Program on Electrical and Computer Engineering FCT-UNL.
In collaboration with the PhD Program in Electrical and Computer Engineering - FCT-U Coimbra.
# Table of Contents

## Part 1: Collaborative Networks - I

Modelling Information Flow for Collaboration .......................... 3  
*Christopher Durugbo, Ashutosh Tiwari, and Jeffrey R. Alcock*

Value Systems Management Model for Co-innovation .................. 11  
*Patrícia Macedo and Luis M. Camarinha-Matos*

ProActive Service Entity Framework: Improving Service Selection  
Chances within Large Senior Professional Virtual Community  
Scenario .......................................................... 21  
*Tiago Cardoso and Luis M. Camarinha-Matos*

## Part 2: Collaborative Networks - II

Competence Mapping through Analysing Research Papers of a  
Scientific Community ............................................. 33  
*Antonio P. Volpentesta and Alberto M. Felicetti*

Tuple-Based Semantic and Structural Mapping for a Sustainable  
Interoperability ..................................................... 45  
*Carlos Agostinho, João Sarraipa, David Goncalves, and  
Ricardo Jardim-Goncalves*

Planning and Scheduling for Dispersed and Collaborative Productive  
System ............................................................. 57  
*Marcosiris A.O. Pessoa, Fabrício Junqueira, Paulo E. Miyagi, and  
Diolino J. Santos Fo*

## Part 3: Service-Oriented Systems

An SOA Based Approach to Improve Business Processes Flexibility in  
PLM ........................................................................ 67  
*Safa Hachani, Lilia Gzara, and Hervé Verjus*

A Model for Automated Service Composition System in SOA  
Environment .......................................................... 75  
*Pawel Stelmach, Adam Grzech, and Krzysztof Juszczyszyn*

The Proposal of Service Oriented Data Mining System for Solving  
Real-Life Classification and Regression Problems .................... 83  
*Agnieszka Prusiewicz and Maciej Zięba*
Personalisation in Service-Oriented Systems Using Markov Chain Model and Bayesian Inference ........................................ 91
Jakub M. Tomczak and Jerzy Świątek

Part 4: Computational Intelligence

Automatic Extraction of Document Topics .......................... 101
Luís Teixeira, Gabriel Lopes, and Rita A. Ribeiro

Adaptive Imitation Scheme for Memetic Algorithms ................. 109
Ehsan Shahamatinia, Ramin Ayanzadeh, Rita A. Ribeiro, and Saeid Setayeshi

Design and Applications of Intelligent Systems in Identifying Future Occurrence of Tuberculosis Infection in Population at Risk .......... 117
Adel Ardalan, Ebru Selin Selen, Hesam Dashti, Adel Talaat, and Amir Assadi

Part 5: Robotic Systems - I

Gait Intention Analysis for Controlling Virtual Reality Walking Platforms ................................................................. 131
Laura Madalina Dascalu, Adrian Stavar, and Doru Talaba

A Survey on Multi-robot Patrolling Algorithms ....................... 139
David Portugal and Rui Rocha

Autonomous Planning Framework for Distributed Multiagent Robotic Systems ............................................................... 147
Marko Švaco, Bojan Šekoranja, and Bojan Jerbić

Part 6: Robotic Systems - II

Controlling a Robotic Arm by Brainwaves and Eye Movement ......... 157
Cristian-Cezar Postelnicu, Doru Talaba, and Madalina-Ioana Toma

Robot Emotional State through Bayesian Visuo-Auditory Perception ... 165
José Augusto Prado, Carlos Simplicio, and Jorge Dias

Manipulative Tasks Identification by Learning and Generalizing Hand Motions .............................................................. 173
Diego R. Faria, Ricardo Martins, Jorge Lobo, and Jorge Dias

Evaluation of the Average Selection Speed Ratio between an Eye Tracking and a Head Tracking Interaction Interface .............. 181
Florin Bărbuceanu, Mihai Duguleănă, Stoianovici Vlad, and Adrian Nedelcu
Part 7: Robotic Systems - III

LMA-Based Human Behaviour Analysis Using HMM .......... 189
   Kamrad Khoshhal, Hadi Aliakbarpour, Kamel Mekhnacha,
   Julien Ros, João Quintas, and Jorge Dias

Daily Activity Model for Ambient Assisted Living ............. 197
   GuoQing Yin and Dietmar Bruckner

Diagnosis in Networks of Mechatronic Agents: Validation of a Fault
Propagation Model and Performance Assessment ................. 205
   Luis Ribeiro, José Barata, Bruno Alves, and João Ferreira

Distributed Accelerometers for Gesture Recognition and
Visualization .................................................. 215
   Pedro Trindade and Jorge Lobo

Part 8: Petri Nets

Towards Statecharts to Input-Output Place Transition Nets
Transformations ................................................. 227
   Rui Pais, Luís Gomes, and João Paulo Barros

Petri Net Based Specification and Verification of
Globally-Asynchronous-Locally-Synchronous System ........... 237
   Filipe Moutinho, Luís Gomes, Paulo Barbosa,
   João Paulo Barros, Franklin Ramalho, Jorge Figueiredo,
   Anikó Costa, and André Monteiro

Automatic Generation of Run-Time Monitoring Capabilities to Petri
Nets Based Controllers with Graphical User Interfaces .......... 246
   Fernando Pereira, Luis Gomes, and Filipe Moutinho

SysVeritas: A Framework for Verifying IOPT Nets and Execution
Semantics within Embedded Systems Design ..................... 256
   Paulo Barbosa, João Paulo Barros, Franklin Ramalho, Luís Gomes,
   Jorge Figueiredo, Filipe Moutinho, Anikó Costa, and André Aranha

Part 9: Sensorial and Perceptional Systems

Automatic Speech Recognition: An Improved Paradigm ........ 269
   Tudor-Sabin Topoleanu and Gheorghe Leonte Mogan

HMM-Based Abnormal Behaviour Detection Using Heterogeneous
Sensor Network .................................................. 277
   Hadi Aliakbarpour, Kamrad Khoshhal, João Quintas,
   Kamel Mekhnacha, Julien Ros, Maria Andersson, and
   Jorge Dias
### Part 10: Sensorial Systems and Decision

Wireless Monitoring and Remote Control of PV Systems Based on the ZigBee Protocol .......................... 297  
*V. Katsioulis, E. Karapidakis, M. Hadjinicolaou, and A. Tsikalakis*

A Linear Approach towards Modeling Human Behavior .................. 305  
*Rui Antunes, Fernando V. Coito, and Hermínio Duarte-Ramos*

Nonlinear-Fuzzy Based Design Actuator Fault Diagnosis for the Satellite Attitude Control System .................. 315  
*Alireza Mirzaee and Ahmad Foruzantabar*

### Part 11: Signal Processing

Vergence Using GPU Cepstral Filtering ............................... 325  
*Luis Almeida, Paulo Menezes, and Jorge Dias*

Motion Patterns: Signal Interpretation towards the Laban Movement Analysis Semantics ......................... 333  
*Luís Santos and Jorge Dias*

ARMA Modelling of Sleep Spindles ........................................ 341  
*João Caldas da Costa, Manuel Duarte Ortigueira, and Arnaldo Batista*

Pattern Recognition of the Household Water Consumption through Signal Analysis.................. 349  
*Giovana Almeida, José Vieira, José Marques, and Alberto Cardoso*

### Part 12: Fault-Tolerant Systems

Survey on Fault-Tolerant Diagnosis and Control Systems Applied to Multi-motor Electric Vehicles .................. 359  
*Alexandre Silveira, Rui Esteves Araújo, and Ricardo de Castro*

Design of Active Holonic Fault-Tolerant Control Systems .................. 367  
*Robson M. da Silva, Paulo E. Miyagi, and Diolino J. Santos Filho*

Design of Supervisory Control System for Ventricular Assist Device ........ 375  
*André Cavalheiro, Diolino Santos Fo., Aron Andrade, José Roberto Cardoso, Eduardo Bock, Jeison Fonseca, and Paulo Eigi Miyagi*
Multi-agent Topologies over WSANs in the Context of Fault Tolerant Supervision ................................................................. 383
Gonçalo Nunes, Alberto Cardoso, Amâncio Santos, and Paulo Gil

Part 13: Control Systems

Switched Unfalsified Multicontroller ........................................ 393
Fernando Costa, Fernando Coito, and Luís Palma

Design, Test and Experimental Validation of a VR Treadmill Walking Compensation Device ...................................................... 402
Adrian Stavar, Laura Madalina Dascalu, and Doru Talaba

Design, Manufacturing and Tests of an Implantable Centrifugal Blood Pump ................................................................. 410
Eduardo Bock, Pedro Antunes, Beatriz Uebelhart,
Tarcíssio Leão, Jéison Fonseca, André Cavalheiro,
Diolino Santos Filho, José Roberto Cardoso, Bruno Utiyama,
Juliana Leme, Cibele Silva, Aron Andrade, and Celso Arruda

Part 14: Energy Systems - I

Embedded Intelligent Structures for Energy Management in Vehicles ... 421
Ana Pușcaș, Marius Carp, Paul Borza, and Iuliu Szekely

Energy Management System and Controlling Methods for a LDH1250HP Diesel Locomotive Based on Supercapacitors ............. 429
Marius Cătălin Carp, Ana Maria Pușcaș, and Paul Nicolae Borza

Home Electric Energy Monitoring System: Design and Prototyping ..... 437
João Gil Josué, João Murta Pina, and Mário Ventim Neves

Sustainable Housing Techno-Economic Feasibility Application .......... 445
Ricardo Francisco, Pedro Pereira, and João Martins

Part 15: Energy Systems - II

Study of Spread of Harmonics in an Electric Grid ......................... 457
Sergio Ruiz Arranz, Enrique Romero-Cadaval,
Eva González Romera, and María Isabel Milanés Montero

Impact of Grid Connected Photovoltaic System in the Power Quality of a Distribution Network .................................................. 466
Pedro González, Enrique Romero-Cadaval, Eva González, and Miguel A. Guerrero
Power Quality Disturbances Recognition Based on Grammatical
Inference ........................................................ 474
   Tiago Fonseca and João F. Martins

Weather Monitoring System for Renewable Energy Power Production
Correlation ........................................................ 481
   Marcos Afonso, Pedro Pereira, and João Martins

Part 16: Electrical Machines - I

Comparison of Different Modulation Strategies Applied to PMSM
Drives under Inverter Fault Conditions .............................. 493
   Jorge O. Estima and A.J. Marques Cardoso

Optimization of Losses in Permanent Magnet Synchronous Motors for
Electric Vehicle Application ........................................ 502
   Ana Isabel León-Sánchez, Enrique Romero-Cadaval,
   María Isabel Milanés-Montero, and Javier Gallardo-Lozano

A DC-DC Step-Up $\mu$-Power Converter for Energy Harvesting
Applications, Using Maximum Power Point Tracking, Based on
Fractional Open Circuit Voltage .................................... 510
   Carlos Carvalho, Guilherme Lavareda, and Nuno Paulino

Wireless Sensor Network System for Measuring the Magnetic Noise of
Inverter-Fed Three-Phase Induction Motors with Squirrel-Cage Rotor...
   Andrei Negoita, Gheorghe Scutaru, Ioan Peter, and
   Razvan Mihai Ionescu

Part 17: Electrical Machines - II

Axial Disc Motor Experimental Analysis Based in Steinmetz
Parameters ........................................................... 529
   David Inácio, João Martins, Mário Ventim Neves,
   Alfredo Álvarez, and Amadeu Leão Rodrigues

Transverse Flux Permanent Magnet Generator for Ocean Wave Energy
Conversion ............................................................ 537
   José Lima, Anabela Pronto, and Mário Ventim Neves

A Fractional Power Disk Shaped Motor with Superconducting
Armature ............................................................. 545
   Gonçalo F. Luís, David Inácio, João Murta Pina, and
   Mário Ventim Neves
