Preface

VECPAR is an international conference series dedicated to the promotion and advancement of all aspects of high performance computing for computational science, as an industrial technique and academic discipline, extending the frontier of both the state of the art and the state of practice. The audience and participants of VECPAR are seen as researchers in academic departments, government laboratories, and industrial organizations. There is now a permanent website for the conference series at http://vecpar.fe.up.pt, where the history of the conference is described.

The 9th edition of VECPAR was organized in Berkeley (USA), June 22–25, 2010. It was the 4th time the conference was celebrated outside Porto after Valencia (Spain) in 2004, Rio de Janeiro (Brazil) in 2006, and Toulouse (France) in 2008.

The whole conference program consisted of 6 invited talks, 45 papers, and 5 posters.

The major themes were:

- Large Scale Simulations in CS&E
- Linear Algebra on GPUs and FPGAs
- Linear Algebra on Emerging Architectures
- Numerical Algorithms
- Solvers on Emerging Architectures
- Load Balancing
- Parallel and Distributed Computing
- Parallel Linear Algebra
- Numerical Algorithms on GPUs

Three workshops were organized before the conference:

iWAPT — Fifth international Workshop on Automatic Performance Tuning
PEEPS — Workshop on Programming Environments for Emerging Parallel Systems
HPC Tools — Tutorial on High Performance Tools for the Development of Scalable and Sustainable Applications

The most significant contributions have been made available in the present book, edited after the conference, and after a second review of all orally presented papers at the conference.

Henricus Bouwmeester, from the University of Colorado Denver received the Best Student Presentation award for his talk on “Towards an Efficient Tile Matrix Inversion of Symmetric Positive Definite Matrices on Multicore Architectures”.
VECPAR 2010 took place at the Sutardja Dai Hall of the Center for Information Technology Research in the Interest of Society (CITRIS), University of California, Berkeley, USA. The logistics and organizational details were dealt with by Yeen Mankin, with the kind support of Dany DeCecchis and Jean Piero Suarez (students at San Diego State University).

Paper submission and selection were managed via the conference management system, hosted and operated by the Faculty of Engineering of the University of Porto (FEUP)\(^1\). Websites were maintained by both FEUP and the Lawrence Berkeley National Laboratory; registrations were managed by the Lawrence Berkeley National Laboratory.

The success of the VECPAR conferences and the long life of the series result from the collaboration of many people. As before, given the widespread organization of the meeting, a large number of collaborators were involved. Here we mention only a few. Through them we thank many others who offered their time and commitment to the success of the conference workshops and tutorial: Takahiro Katagiri, Richard Vuduc, Reiji Suda, Jonathan Carter, John Cavazos, Kengo Nakajima, Lenny Oliker, Nick Wright, Tony Drummond, Sameer Shende, and Jose Roman.

For their contributions to the present book, we must thank all the authors for meeting the deadlines and all members of the Scientific Committee who helped us so much in selecting the papers. We also thank the members of the committees involved in the organization of the workshops held before the conference.

November 2010

José M.L.M. Palma
Michel Daydé
Osni Marques
J. Correia Lopes

---

\(^1\) The VECPAR series of conferences has been organized by the Faculty of Engineering of Porto (FEUP) since 1993.
Organization

Organizing Committee

Osni Marques       LBNL, USA (Chair)
Jonathan Carter   LBNL, USA
Tony Drummond     LBNL, USA
Masoud Nikravesh  LBNL, USA
Erich Strohmaier  LBNL, USA
J. Correia Lopes  FEUP/INESC Porto, Portugal (Web Chair)

Steering Committee

José Palma         University of Porto, Portugal (Chair)
Álvaro Coutinho   COPPE/UFRJ, Brazil
Michel Daydé       University of Toulouse/IRIT, France
Jack Dongarra     University of Tennessee, USA
Inês Dutra        University of Porto, Portugal
José Fortes       University of Florida, USA
Vicente Hernandez Technical University of Valencia, Spain
Ken Miura         National Institute of Informatics, Japan

Scientific Committee

Michel J. Daydé     France (Chair)
P. Amestoy          France
Ben Allen           USA
Reza Akbarinia     France
Jacques Bahi       France
Carlos Balsa       Portugal
Valmir Barbosa     Brazil
Xiao-Chuan Cai     USA
Jonathan Carter   USA
Olivier Coulaud   France
José Cardoso e Cunha Portugal
Rudnei Cunha       Brazil
Frédéric Desprez   France
Jack Dongarra     USA
Tony Drummond     USA

Invited Speakers

Charbel Farhat  Stanford University, USA
David Mapples  Allinea Software Inc., USA
David Patterson  UC Berkeley, USA
John Shalf  Lawrence Berkeley National Laboratory, USA
Thomas Sterling  Louisiana State University and CALTECH, USA
Takumi Washio  University of Tokyo, Japan

Additional Reviewers

Ignacio Blanquer
Jonathan Bronson
Vitalian Danciu
Murat Efe Guney
Linh K. Ha
Wenceslao Palma
Francisco Isidro Massetto
Manuel Prieto Matias
Silvia Knittl
Andres Tomas
Erik Torres
Johannes Watzl

Sponsoring Organizations

The Organizing Committee is very grateful to the following organizations for their support:

Allinea  Allinea Software, USA
Meyer Sound  Meyer Sound Laboratories Inc., USA
ParaTools  ParaTools Inc., USA
Berkeley Lab  Lawrence National Berkeley Laboratory, USA
U. Porto  Universidade do Porto, Portugal
# Table of Contents

## Invited Talks

- Exascale Computing Technology Challenges ........................................... 1  
  *John Shalf, Sudip Dosanjh, and John Morrison*

- The Parallel Revolution Has Started: Are You Part of the Solution or Part of the Problem? An Overview of Research at the Berkeley Parallel Computing Laboratory ........................................... 26  
  *David Patterson*

- HPC Techniques for a Heart Simulator ........................................... 28  
  *Takumi Washio, Jun-ichi Okada, Seiryo Sugiura, and Toshiaki Hisada*

- Game Changing Computational Engineering Technology ..................... 30  
  *Charbel Farhat*

- HPC in Phase Change: Towards a New Execution Model ..................... 31  
  *Thomas Sterling*

## Linear Algebra and Solvers on Emerging Architectures

- Factors Impacting Performance of Multithreaded Sparse Triangular Solve ........................................... 32  
  *Michael M. Wolf, Michael A. Heroux, and Erik G. Boman*

- Performance and Numerical Accuracy Evaluation of Heterogeneous Multicore Systems for Krylov Orthogonal Basis Computation ................. 45  
  *Jérôme Dubois, Christophe Calvin, and Serge Petiton*

- An Error Correction Solver for Linear Systems: Evaluation of Mixed Precision Implementations ........................................... 58  
  *Hartwig Anzt, Vincent Heuveline, and Björn Rocker*

- Multifrontal Computations on GPUs and Their Multi-core Hosts ........... 71  
  *Robert F. Lucas, Gene Wagenbreth, Dan M. Davis, and Roger Grimes*

- Accelerating GPU Kernels for Dense Linear Algebra ....................... 83  
  *Rajib Nath, Stanimire Tomov, and Jack Dongarra*

</table>
Optimization of Aircraft Wake Alleviation Schemes through an Evolution Strategy ...................................................... 210
Philippe Chatelain, Mattia Gazzola, Stefan Kern, and Petros Koumoutsakos

Parallel and Distributed Computing

On-Line Multi-threaded Processing of Web User-Clicks on Multi-core Processors ................................................................. 222
Carolina Bonacic, Carlos Garcia, Mauricio Marin, Manuel Prieto, and Francisco Tirado

Performance Evaluation of Improved Web Search Algorithms .......... 236
Esteban Feuerstein, Veronica Gil-Costa, Michel Mizrahi, and Mauricio Marin

Text Classification on a Grid Environment ............................................. 251
Valeriana G. Roncero, Myrian C.A. Costa, and Nelson F.F. Ebecken

On the Vectorization of Engineering Codes Using Multimedia Instructions ................................................................. 263
Manoel Cunha, Alvaro Coutinho, and J.C.F. Telles

Numerical Library Reuse in Parallel and Distributed Platforms ......... 271
Nahid Emad, Olivier Delannoy, and Makarem Dandouna

Improving Memory Affinity of Geophysics Applications on NUMA Platforms Using Minas ..................................................... 279
Christiane Pousa Ribeiro, Márcio Castro, Jean-François Méhaut, and Alexandre Carissimi

HPC Environment Management: New Challenges in the Petaflop Era ... 293
Jonas Dias and Albino Aveleda

Evaluation of Message Passing Communication Patterns in Finite Element Solution of Coupled Problems ........................................ 306
Renato N. Elias, Jose J. Camata, Albino Aveleda, and Alvaro L.G.A. Coutinho

Applying Process Migration on a BSP-Based LU Decomposition Application ................................................................. 314
Rodrigo da Rosa Righi, Laércio Lima Pilla, Alexandre Carissimi, Philippe Olivier Alexandre Navaux, and Hans-Ulrich Heiss

A P2P Approach to Many Tasks Computing for Scientific Workflows ... 327
Eduardo Ogasawara, Jonas Dias, Daniel Oliveira, Carla Rodrigues, Carlos Pivotto, Rafael Antas, Vanessa Braganholo, Patrick Valduriez, and Marta Mattoso
### Numerical Algorithms

A Parallel Implementation of the Jacobi-Davidson Eigensolver for Unsymmetric Matrices .......................... 380
   
   Eloy Romero, Manuel B. Cruz, Jose E. Roman, and Paulo B. Vasconcelos

The Impact of Data Distribution in Accuracy and Performance of Parallel Linear Algebra Subroutines .................. 394
   
   Björn Rocker, Mariana Kolberg, and Vincent Heuveline

On a strategy for Spectral Clustering with Parallel Computation .......... 408
   
   Sandrine Mouysset, Joseph Noailles, Daniel Ruiz, and Ronan Guivarch

On Techniques to Improve Robustness and Scalability of a Parallel Hybrid Linear Solver .......................... 421
   
   Ichitaro Yamazaki and Xiaoye S. Li

Solving Dense Interval Linear Systems with Verified Computing on Multicore Architectures ......................... 435
   
   Cleber Roberto Milani, Mariana Kolberg, and Luiz Gustavo Fernandes

TRACEMIN-Fiedler: A Parallel Algorithm for Computing the Fiedler Vector ........................................... 449
   
   Murat Manguoglu, Eric Cox, Faisal Saied, and Ahmed Sameh

Applying Parallel Design Techniques to Template Matching with GPUs ..................................................... 456
   
   Robert Finis Anderson, J. Steven Kirtzic, and Ovidiu Daescu
